

Halogen lamps

Double envelope HalogenA Pro

HalogenA are low-wattage double-envelope halogen lamps containing an electrically fused mains-voltage coiled coil linear filament. They are equipped with built-in arc-preventing fuses and the filament is fixed in the quartz tube by indents. The tube is placed axially in a single-ended normal glass outer envelope filled with a mixture of inert gases (to avoid corrosion). These lamps combine the easy manageability of the popular standard incandescent lamp with all the benefits of halogen lighting: high luminous efficacy; crisp, white light; excellent colour rendering; constant light output during life; long life; immediate start and restart; and dimmability. The use of a shorter burner gives the opportunity to reduce the length making HalogenA completely in line with GLS bulb dimensions.

HalogenA double-envelope can be installed with bare hands, unlike traditional halogen lamps; they are fully interchangeable with incandescent lamps of the same wattage; their cap temperature is the same as that of a GLS lamp; and they require no transformer for operation. Their burning position is universal.

Note

Open luminaires are permitted indoors, but in outdoor applications a protective glass cover should be used and the lamp should be fitted in a water-resistant luminaire.

Applications

- Homes, offices, hotels, restaurants, museums and shops.
