definition

The MasterPAR 20 is a mains voltage reflector lamp with E27 base, featuring a low voltage halogen burner. The power conversion from the mains to the 12V light source is achieved by a built-in electronic transformer.

The faceted parabolic pressed-glass reflector is aluminium coated and has a clear flat front glass.

MasterPAR 20 fits in most luminaires designed for PAR 20 and R63 reflector lamps.

The product combines the good efficacy and long lifetime of low voltage halogen technology with the ease of use of PAR HalogenA and R63 lamps.

Compared to 50W PAR 20, the 20W MasterPAR offers 60% energy saving with similar (flood) or even twice (spot) the intensity.

The average lifetime of the product is 5000h, i.e. twice the lifetime of PAR and five times the lifetime of R63.

The product offers an unprecedented beam contrast and uniformity for a mains voltage reflector lamp.

The white 3000 K light matches with other popular light sources like metal halide and low voltage halogen.

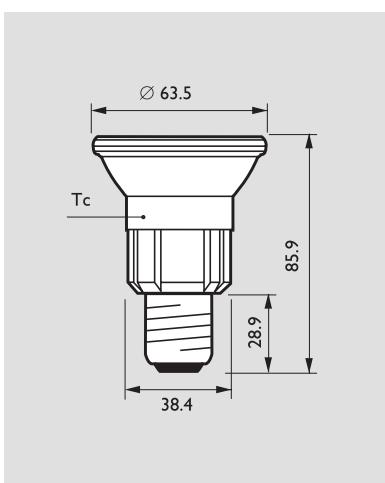

MasterPAR 20 Electronic highlights merchandise and art objects, adds drama and creates ambience.

It is used to upgrade existing PAR 20 or R63 installations and avoids the necessity of a transformer in new installations.

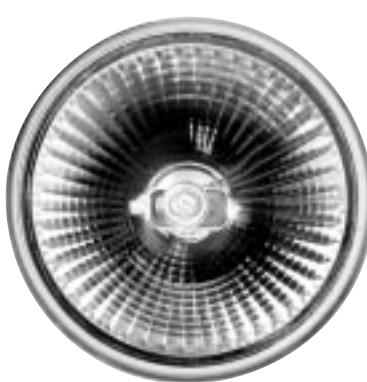

applications

Accent and downlighting in:

- shops • hotels, bars/restaurants • museums/art galleries

notes

- 1) The lamp is not suitable for dimming or for use on electronic switches.
- 2) To prevent overheating of the electronic circuit inside, the case temperature Tc (see drawing) shall not exceed 110 °C at nominal supply voltage. Under normal operating conditions this situation will not occur.
- 3) The product complies with following standards. Safety: IEC 968; EMC: EN 55015, EN 61000-3-2 and EN 55022; EMI: EN 61547.
