lighting solutions that really last

floodlighting luminaires

Tempo

Philips presents Tempo, the most popular line of floodlighting luminaires.

Tempo is compact and sturdy and comes complete with a lamp and an integrated gear for even better convenience. This flexible floodlight accommodates metal halide lamps for good color rendering or a high-pressure sodium lamp for economical running costs. Tempo distributes light evenly and efficiently and offers a well-controlled beam with low-glare. Its rugged all-weather construction is designed for easy cleaning and speedy servicing.

Tempo for billboards

In order for a billboard message to be communicated quickly and effectively, optimal billboard lighting is essential. To achieve this, Tempo optics provides intense and wide light distribution. Offering a choice of symmetrical or asymmetrical reflectors, Tempo allows for optimal and uniform lighting while ensuring visual comfort during the night. Maintenance of billboard lighting is a challenging task. To make it quick and simple, the Tempo floodlight series provides direct access to its gear tray and lamps, thereby lowering maintenance costs as well.

Tempo for decorative lighting

Good decorative lighting enhances the texture, lines and the overall beauty of buildings. It greatly influences how we view and appreciate a structure by night. The Philips' Tempo series enhances architecture by offering optimal light distribution - an essential feature for good facade lighting. Also, Tempo's compact and elegant design can be integrated into any environment.

Build to last

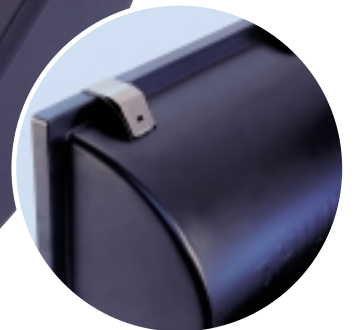

Tempo's IP65 housing is made of high pressure die-cast which is able to withstand corrosion.

The front glass is toughened for safety and sealed with silicon rubber gasket.

Compact and elegant

Tempo's sleek curves, elegant design and compact dimensions make it capable of blending into any environment.

Easy installation and maintenance

Tempo can be easily installed onto walls, poles or to concrete bases in the ground. Its simple electrical connection offers reliability.

Replacement of lamps and gears is extremely convenient by simply removing the four clips, which seal the glass to the housing.
