Please write the serial number of the remote control below. Keep this booklet as a record of your purchase.

Remote Control No.:_____ Main Unit No.:____

Introduction

Congratulations on your purchase of this Honda Keyless Entry System.

Your Honda Keyless Entry System is the product of years of research and development. It will give you many years of reliable performance, protection, and convenience.

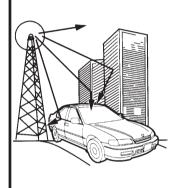

The system consists of a remote control transmitter.

The remote control allows you to operate from outside the vehicle while simultaneously locking and unlocking the doors. The transmitter can also be used to intentionally activate the horn in case of an emergency.

To take full advantage of your Honda Keyless Entry System, we encourage you to read this manual thoroughly.

This device complies with FCC Rules Part 15. Operation is subject to the following two conditions: (1) This device may not cause harmful interference and (2) This device must accept any interference that may be received including interference that may cause undesired operation.

Precautions

Remote Control Range

Several factors affect and reduce remote control range. Among these are:

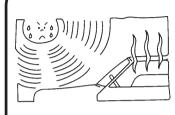

- 1. Proximity to buildings and automobiles.
- 2. Proximity to high power transmitters (television, radio, cellular, HAM radio, etc.).
- 3. When the battery becomes weak, the remote control range becomes short.

Vehicle construction and the surrounding environment cause reflected waves that may interfere with the low power RF signal transmitted by the remote control. This interference may result in "dead spots" around the vehicle; places where remote control signals will not be accepted by the main unit.

Handling Remote Control Transmitter

The remote control transmitter is a sophisticated electronic device. To maintain optimum system performance, avoid mishandling the remote control (i.e. dropping, throwing).

Temperature

Avoid exposing the remote control transmitter to extreme hot or cold weather conditions.

Liquids

Never submerge the Remote Control Transmitter in water.

4

Precautions

Battery Power

Use the remote control transmitter only when necessary. Every time a button is pressed, the remote control is consuming battery power.

If battery is low on power, the transmitting range of the remote control will be affected. Check battery periodically and replace it when necessary.

In Case of Loss

If one of your remote control transmitters is ever lost, contact your local Honda dealer for a replacement. Your system will be reprogrammed to prevent the lost remote control transmitter from operating your system. In this case, take all the other remote control transmitters to have them reprogrammed.

If you own extra remotes, bring it all to the dealer for

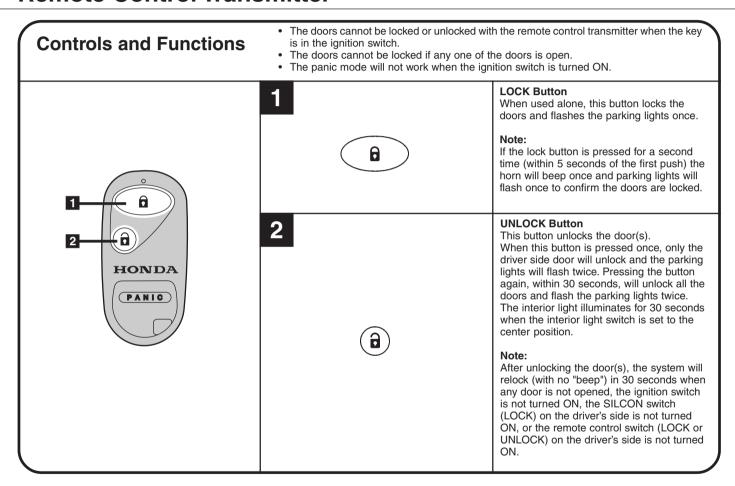

reprogramming.

Outside Cleaning

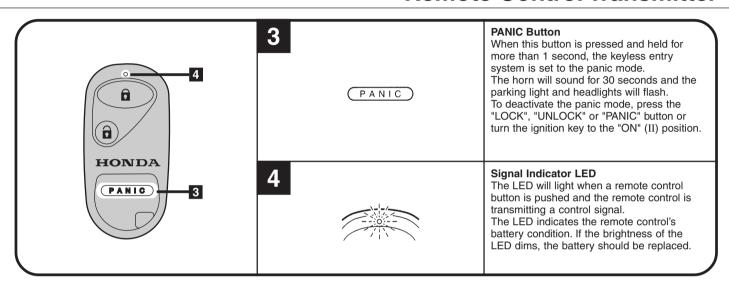

Use a soft cloth to clean the main unit and remote control. Do not use kerosene, thinner or any other type of solvent.

Remote Control Code Programming

How to Program Remote Control Transmitters

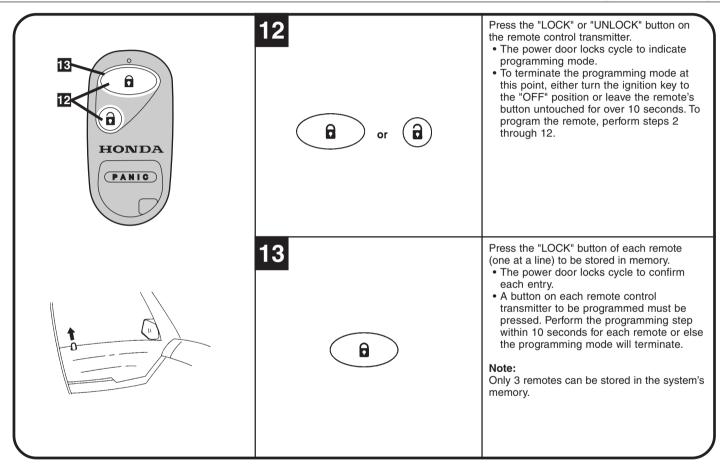

- For steps 2 through 12, each step must be completed within 5 seconds. For step 13, within 10 seconds for each remote.
- Up to 3 remotes can be stored in memory.
- All remotes to be programmed must be on hand.
- A non programmed remote will work for this procedure.
- Turn the ignition key to the "OFF" position to complete the programming procedure.
