

Quick Start Guide: Installing Outlook Connector on Active Directory

1

Install GFI MailArchiver and set up a mail server (if required)

1. Install GFI MailArchiver
2. Launch the GFI MailArchiver management console from **Start ▶ All Programs ▶ GFI MailArchiver ▶ GFI MailArchiver**
3. Expand the **Configuration** node and click on **Mail Servers to Archive**
4. Click on **Add Mail Server** and follow the wizard to set up at least one mail server
5. Click on **Save Settings**

For more information refer to the 'Configuring the mail servers to archive' section in the server manual.

2

Prepare MS Exchange Server for use with the GFI MailArchiver Outlook Connector

The GFI MailArchiver synchronisation process requires a user with special authority on all user mailboxes. This user must also have executable rights on the machine on which GFI MailArchiver is installed.

Exchange 2000/2003

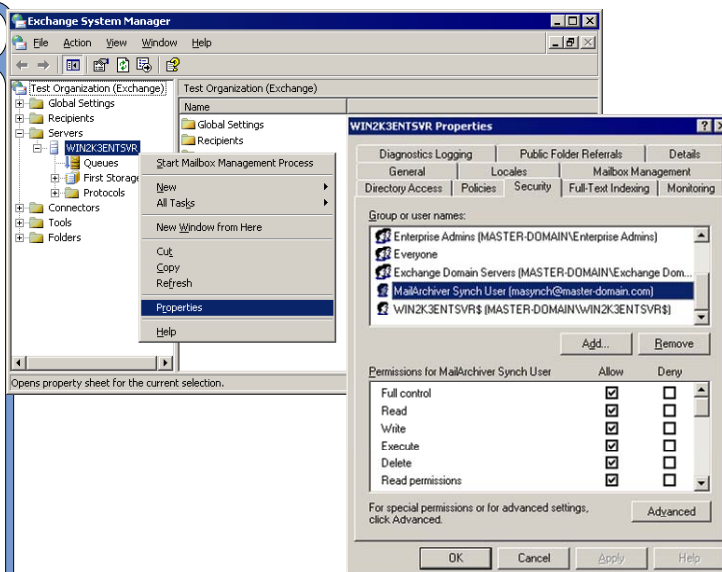

1. Launch Microsoft Exchange **System Manager**
2. Right click on the **Servers** node within the appropriate Administrative Group and select **Properties**
3. Access the **Security** tab and click **Add...** to add the user to whom you granted special authority on all user mailboxes.

NOTE: It is recommended to create a non-realistic user account (with no roaming profile) that is difficult to guess. The username here is for illustration purposes only.

4. In the Permissions list, click **Allow** next to **Full Control**.

Exchange 2007

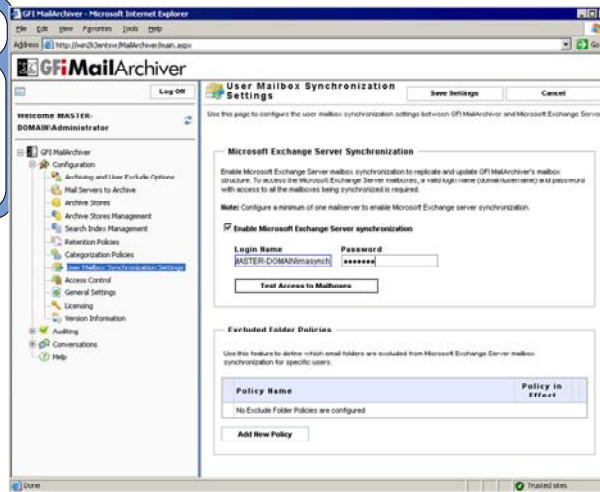

1. Open the **Exchange Management Shell**
2. Run the following Windows PowerShell commandlet:
Add-ADPermission -<mailbox store name>
"Mailbox Store" -<username> "Trusted User"
-AccessRights GenericAll
 Example:
Add-ADPermission -Identity "First Storage Group" -User "master-domain\masynch" -AccessRights GenericAll
3. Repeat the procedure above for each mailbox store database required.

3

Configure user mailbox synchronization from GFI MailArchiver

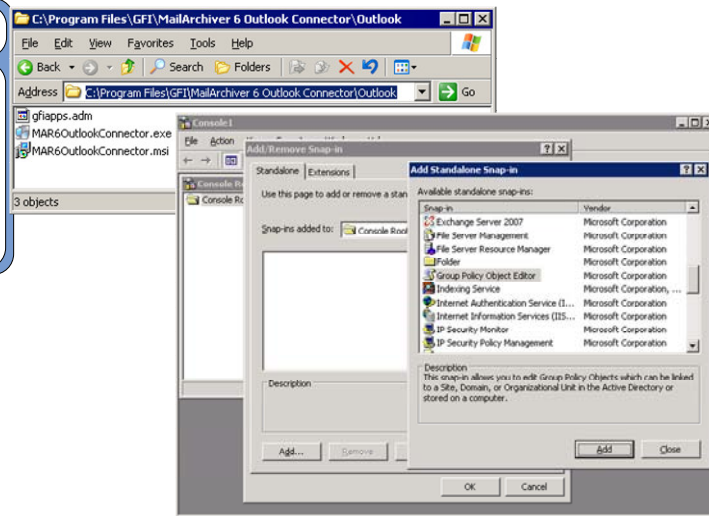

1. From the GFI MailArchiver management console, expand the **Configuration** node and click on **User Mailbox Synchronization Settings**
2. In the right pane, select **Enable Microsoft Exchange Server synchronization**
3. Enter the **Login Name** and **Password**
4. Click on **Test Access to Mailboxes**

4

Deployment via Active Directory: Setting up the environment (1)

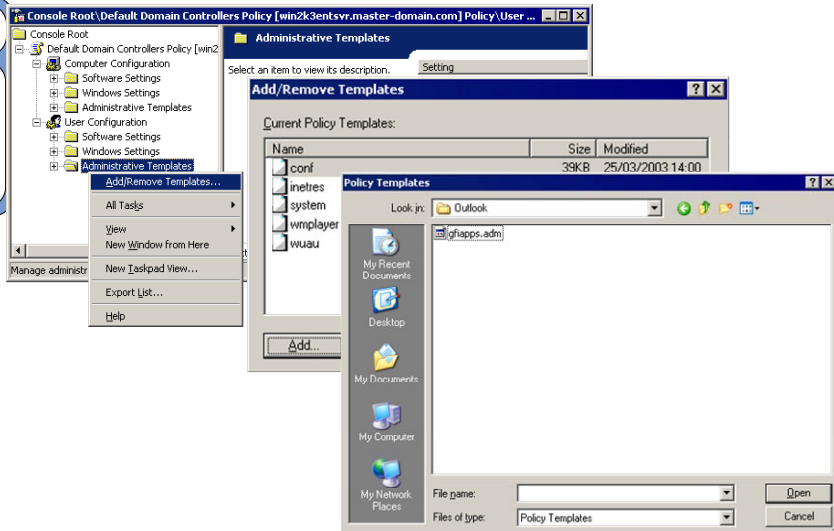

1. Copy the file **MAR6OutlookConnector.msi** located in: C:\Program Files\GFI\MailArchiver\Outlook to a share accessible by all domains.
2. Run **mmc.exe** from the **Start > Run** dialog
3. Click **File > Add/Remove Snap-in...** and click **Add...**
4. In the list with Available Standalone Snap-ins select the **Group Policy Object Editor** snap-in and click **Add**
5. Click **Browse...** and select the domain policy you wish to edit
6. Select the domain policy and click **OK**

5

Deployment via Active Directory: Setting up the environment (2)

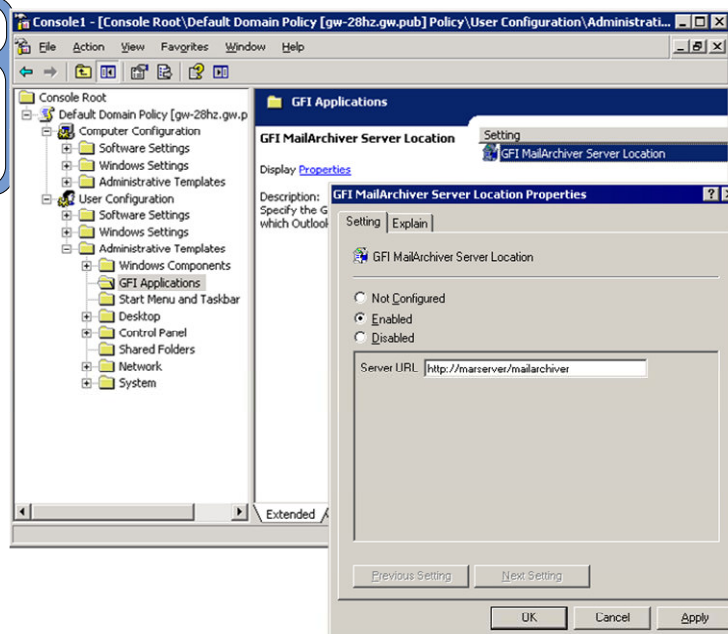

1. Right click on **Console Root > User Configuration > Administrative Templates** and select **Add/Remove Templates...**
2. Click on **Add...**
3. Browse for the file **gfapps.adm** located in: C:\Program Files\GFI\MailArchiver\Outlook
4. Click **Open**

6

Configure the GFI MailArchiver Outlook Connector policy

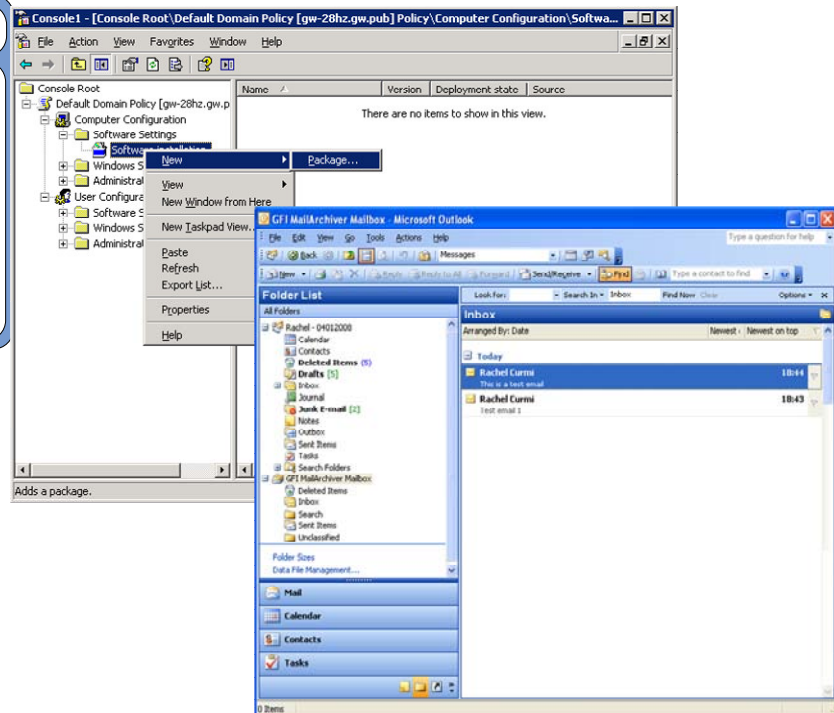

1. Using the **Group Policy Object Editor** opened in step 5, expand the **Domain Policy** node ► **User Configuration** node ► **Administrative Templates** node
2. In the right pane, double click the **GFI MailArchiver Server Location** policy
3. Select **Enabled** and change the server URL

7

Deploy the GFI MailArchiver Outlook Connector using GPO

1. Using the **Group Policy Object Editor** opened in step 4, expand the **Domain Policy** node ► **Computer Configuration** node ► **Software Settings** node
2. Right click on **Software installation** and select **New ► Package...**
3. In the **Open** dialog and locate the share on which you saved **MAROutlookConnector.msi** in step 4 above
4. Choose the deployment option – select **Assigned** and **OK**.
5. Once the installation is finished, you can verify that the Outlook Connector has installed as follows:
 - i. Open Microsoft Outlook
 - ii. Check that a new folder called **GFI MailArchiver Mailbox** has been created.

8

More advanced configuration

GFI MailArchiver ships with several pre-configurations which you can customize to suit your requirements. For more advanced configuration refer to the user manual at: <http://www.gfi.com/mailarchiver/mar6manual.pdf>.
