FEATURES

Now with “PRESETS”

PRESETS (Outdoor, Indoor, Elevator, Lobby, Hallway & Low Light)
Used for a quick and easy setup for the installation environment.

700TVL Resolution

Horizontal resolution of 700 TV lines is achieved by using a SONY Super-HAD CCD with 520,000 pixels, and a custom DSP yielding pictures with a high S/N ratio.

INTENSIFIER H

More Powerful Performance in low light condition.
High quality pictures to be captured in very low light condition.

WDR

More Powerful WDR in strong back lighting.

SPECO DNR

The Intensifier camera has a DSP chip that can remove image noise efficiently showing clean images in low light conditions.

HLC (High Light Compensation)

This function reverses bright spots in the picture (such as headlights). This enables the entire system to do a better job of resolving and displaying grayscale information such as a license plate.

FEATURES

Motion Detection with Alarm Output

Built in motion detector with adjustable areas of coverage will send a signal to an external alarm device when motion is detected.

PRIVACY MASK

It also has the ability to mask up to 8 areas of the picture where viewing is not desired. Each zone can be independently programmed via the OSD.

STABILIZER

This function removes image jitter that is caused by vibrations in the building and reduces the amount of hard drive space.

DIGITAL ZOOM

The picture could be enlarged by using this digital zoom function.

DAY/NIGHT

The IntensifierH camera can show color pictures in all lighting conditions, or you can have it automatically switch to a B/W picture in low light conditions

OSD

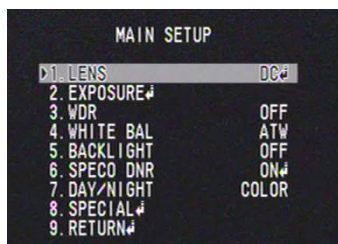

All camera functions are menu driven for easy use.

- * MANUAL : You can control shutter speed manually. (1/60 ~ 1/120,000)
- --- : Shutter speed is fixed at 1/60 sec. (1/50 sec.)

NOTE

- When using a DC lens, set the shutter mode to A.FLK if color rolling occurs.
- When the SHUTTER is set to ESC after selecting Internal Synchronization Type, the picture may become unstable if the camera faces a bright fluorescent light. Therefore, take care when choosing the installation position.
- When the SHUTTER is set to MANUAL or A.FLK mode, INTENSIFY will be disabled.

OSD MENU DETAILS

- ◆ AGC(AUTO GAIN CONTROL) : The higher the gain level, the brighter the screen, but higher the noise.

 - AUTO : Activates the INTENSIFY function.

NOTE

- If you press the SET button in 'AUTO' mode, you can adjust brightness by increasing or decreasing the shutter speed. (x2 ~ x512)
- Note that the higher the INTENSIFY level, the brighter the screen, but the more likely there will be a ghosting effect.
- It is normal for noise, spots and whitish symptoms to appear in INTENSIFY mode when the D-ZOOM level is increased.

4. WDR SETUP

WDR illuminates darker areas of an image while retaining the same light level for brighter area to even out the overall brightness of images with high contrast between bright and dark areas.

6. BACK LIGHT SETUP

- ◆ **USER BLC** : Enables a user to select a desired area on a picture and view that area more clearly.
- ◆ **HLC (High Light Compensation)** : If the scene contains extremely bright light areas such as from car headlight, the light can mask out much of the on-screen detail. Use HLC feature to remove these exceptionally bright light areas to allow detail such as car license plate number to become visible.

NOTE

- Because there can be a difference in the effectiveness of HLC according to the amount of light area in the screen, optimize the installation angle for the best HLC performance.
- When dark, the HLC is only activated when a bright light exceeding a specific size in NIGHT ONLY mode.
- The HLC is not activated in day light or when bright light is not present at night in NIGHT ONLY mode.
- BLC Function doesn't work in the B/W mode of the DAY/NIGHT menu.

This function reduces the background noise in a low light environment.

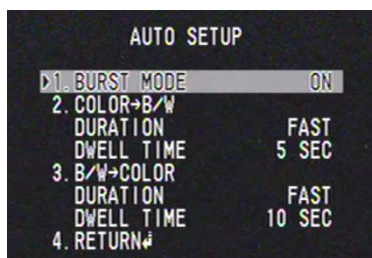

NOTE

- When the AGC mode of the EXPOSURE menu is 'OFF', you cannot set the SPECO DNR to 'ON' or 'OFF'.
- When adjusting the noise reduction level in DNR3 mode, remember that the higher level is set, the greater reduction in noise level, as will the brightness of the image.
