

TENSIOMETER DM-8

General:

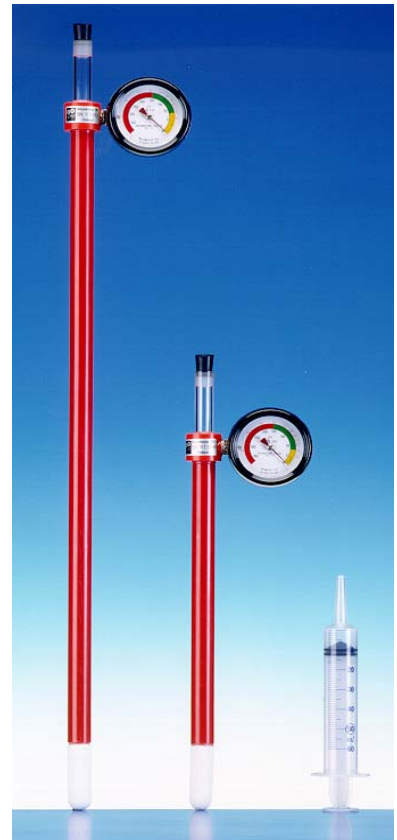

A soil moisture tester of simple design? Yes - such a tester exists! And it's a novelty in this field too. And it's really a tester of simple design. Now you need no longer extract the tester from the soil, just make sure it is properly inserted and all you have to do is read the soil moisture content.

Reading the meter is very simple too; the scale graduation is made in three colours to indicate dry, moist or wet, so that you can see at a glance what condition your soil is in. This simple reading makes for fast and efficient working in the horticultural and agricultural business. Particularly when you place several testers in various spots you will be able to readily know where and how much watering is required.

We refer to our user-manual for a correct and useful use of the analogue tensiometer DM-8.

Technical specifications:

Type	: DM-8
Brand	: Nieuwkoop BV - Aalsmeer - Holland
Range	: -350...0hPa/ 1,0...2,5pF
