

TEMPPPO 6.0 Update

TEMPPPO 6.0.25

Features

#6132311: **New icons for setting results of selected test steps.** Depending on the selected test steps, the icon changes its display.

#6274858: **TEMPPPO supports now DOORS 9.4**

#6281171: **Improve behavior for report generation for a structure with image columns.**

#6289283: The behavior of **relative values** in all analyses was updated.

#6416120: **XML update** provides now also the possibility to keep the **"Test Goal"** information

Filter is extended by "TC ID": Now it is possible to create use "IN" and "NOT IN" operators and list of "TC IDs".

#6519528: **Extension of test suite creation "Based on an existing test suite with restrictions to test result":** Options "Get Actual Result" and "Bug ID" are added.

Fixes

#5726150: Requirement structures with umlaut

#6152912: TP description is not saved when a TP is created on branch, merged and description is changed.

#6341804: Error when creating test suite: Modal progress bar is introduced right after clicking "Finish" in test suite wizard.

#6403941: DOORS import fails: UTF-8 problem when cutting attribute names longer than 50 characters

#6411396: XML Test Structure import with requirement structures reduces now information message number if lots of requirement structures are assigned.

#6425332: Update of test suite wizard introduction page.

#6452523: Test structure filter returns wrong result in test suite

#6454801: Report with "Planned test execution time" is not OK for a filtered test suite.

#6454801: Empty project cannot be deleted

#6484896: Error received when creating a report for a test suite

#6505851: DOORS baseline couldn't be imported

#6516968: Bold data in test steps is doubled in report

Report preview of "Report for several test suites" hangs in case of invalid filter.

TEMPPPO 6.0.24

Fixes

- 6488305: User defined ID is not changed when TP/TC is pasted after copy.

TEMPPPO 6.0.23

Features

Report on more than one test suite: Users can now create tabular reports based on several test suites. Optionally a filter can be applied on the selected test suites

Requirement analysis of several test suites: Users can now create analysis of several test suites based on several requirement structures

More than 1 chart in a report: Users can now add any number of charts to any report

Requirement attribute selection in report: Users can now select singular requirement attributes for reports.

Export task list to Excel

Change structure on branch: Users are now informed that order changes are not merged, because structure in latest can be completely different.

Fixes

- #6439693: Faulty XML update creates new TST version
- #5971982: F&R: 2 clicks for changing direction
- #6005124 Renaming attribute values causes wrong filter and test suites
- #6011738: NPE when switching between newsboard and test structure
- Cut & paste of text with hyperlinks doesn't lose hyperlink anymore
- #6013733: Inherited requirements are not displayed in multi selection mode
- Size of uploads is now displayed correctly in TEMPPPO Administrator
- Buttons Edit and View are enabled if more uploads are selected
- #6115502: Task list shows changes, although nothing was changed in DOORS
- #6115473: Progress chart still not OK (#5961663)
- #6113371: History is not written on any TC operation
- #6086332: F/R throws error if a filter is set.
- #6082534: Performance problem when call in execution history
- "Replace All in Test Case" is not enabled in all use cases if a TP is selected.
- #6405162: Find Replace Direction Change
- #6403534: 'Planned test execution time' wrong computed
- #6389106: attribute not readable in combo box
- #6374598: close report-setting dialog with Esc
- #6367191: available requirement attributes displayed in Report settings are not related to RS version that is being assigned to current TS version.
- #6366904: Execution Progress - Requirement Only Window too small
- #6364871: in Test Execution Progress - Requirement Only is unclear from which RS a requirement attribute is
- #6364836: unclear requirement attributes in several test suites report
- #6364814: space before items in menu Report selected is bigger than the initial one
- #6364749: Sometimes "Summary options" is not reported
- #6364642: Same requirement attribute is only displayed once although selected twice
- #6335178: "ORA-01000: maximum open cursors exceeded" error received when creating an analysis via: Evaluation->Analyse selected->Project->Bug ID
- #6327572: HTML Report not correct
- Addition to #6091865: Test Cases are not sorted in Report
- #6277095: Filter in Evaluation > Execution > Filtered is not editable
- #6246384: Nr of hidden TPs is wrong in case of filter
- #6231194: CR Change appearance of FR-Dialog
- #6229053: Carriage returns of description are ignored
- #6218502: Sum of TCs in report not correct

- #6216393: Step nr over 100 not displayed correctly
- TP merge: German message is now improved after merge if RS versions are different
- #6173646: Message is misspelled
- #6172154: error received during XML Update
- #6170975: Apply of filter is criterion is cut if "unknown" text is recognized
- "Comment" of selected task is now always enabled

TEMPPPO 6.0.19

Features

Requirement and attribute tabs are split in multi selection view for TCs and TPs. See user manual, page 136 ff.

TEMPPPO Administrator: Serial loading of project data

Fixes

- #5972037: Find / replace for string beginning with blanks
- #6013733: Display of inherited requirements in multi selection mode. See Feature
- #6039006: Planned execution time in test suites & sum of TCs not correct
- #6043802: TEMPPPO Administrator: Move ownership for requirement structures doesn't work
- #6043853/#6107459: Edit uploads doesn't work
- #6067291: Result coverage not correct
- #6071142: Limit depth of report not correct
- #6075571: Error in filter for attribute values containing "use"

TEMPPPO 6.0.17

Fixes

- Performance of reporting was improved.
- CLI commands were corrected.
- Export test suite to Microsoft Access works without errors.
- Requirement analysis doesn't cause a problem anymore.
- Import from Telelogic DOORS was improved.

TEMPPPO 6.0.16

Fixes

- Test suite creation works correctly.
- Export/Import test suites was improved.

TEMPPPO 6.0.15

Fixes

- Linked uploads cannot be deleted anymore in test structure
- Context menus for editing test steps are disabled in test suite
- Filter window cannot be called in multi selection mode
- History entry is written for "Move ownership"
- Progress bar adapted for long taking report creation / previewing due to lots of images.
- Changing a test case in a branch version and exporting test suite doesn't cause a problem anymore.
- XML Import for test packages works now for existing test package IDs

TEMPPPO 6.0.14

Fixes

- Correction for CLI - commands.

TEMPPPO 6.0.13

Fixes

- Access-DB was corrected because version check-ins were not saved correctly.

TEMPPPO 6.0.12

Fixes

- Problems with test case-template are corrected.

- Corrections of interface to CM-Tool Telelogic Change were done.

TEMPPPO 6.0.11

Fixes

- Filter with attribute 'Overall Result' doesn't throw an error anymore.
- Filter import for test suites works correctly.
- Filter is written correctly to report.
- In Administrator, attributes are shown properly.

Features

Interface for CM-Tool Telelogic Change was improved.

TEMPPPO 6.0.10

Fixes

- Attributes for test packages are shown in assign dialog in multi-selection mode of test packages.
- User defined ID of test packages is written to continuous report.

Features

In Administrator, projects can be copied: the project including assigned users plus meta data except requirement structures is copied.

During test structure XML update, test case name and test steps can be retained.

GUI of analysis was improved and an additional test execution progress is available. In new execution progress a filter can be applied.

TEMPPPO 6.0.9

Fixes

- Opening project properties is improved.
- History entries for attribute assignment changes are inserted correctly.
- Progress Chart is removed from reporting. Word-Reports are generated without any problems.

- The differences after a check-in of requirement structures are computed correctly.

Features

For loading test structure versions, a database connection pool is used reducing login/logoffs on database.

TEMPPPO 6.0.8

Fixes

Applying a test suite filter and closing the test suite window is done correctly.

Features

- Exporting a test structure is now possible via context menu.
- Creating a table report only with test case IDs instead of test case names is now possible.

TEMPPPO 6.0.7

Fixes

Migration is corrected.

For search of strings, occurrences are counted correctly

TEMPPPO 6.0.6

Fixes

The text field width is adapted to the window size in test step assistant.

Requirement info for test structure shows all assigned requirement structures.

During import/update of IBM Telelogic DOORS resource usage was improved.

In TEMPPPO Manager, roles for Oracle connection are set correctly.

TEMPPPO 6.0.5

Features

User-defined IDs for test packages are editable after setting activation.

Compare for test packages over versions is available now.

Fixes

All changed data are saved correctly in multi-selection mode.

Filter can handle requirements and attribute values with comma.

Editing test cases after setting test result to "not executed" works without any problems.

The width of columns in report is equal to report settings.

TEMPPPO 6.0.4

Fixes

Missing indices are created during migration to prevent deadlocks in database. Use a SysDBA - user for migration.

TEMPPPO 6.0.3

Features

New license server is reachable through firewalls. The following settings are required:

- No blocking of javaw.exe in installation directory of license server for incoming and outgoing connections.
- Enable ports for incoming connections: chosen port during installation (2000) and port range 60000 – 61000
- Enable ports for outgoing connections: all high-end ports
- You have to install TEMPPPO client V6.0.3 for usage of new license server.
- It's possible to use TEMPPPO client V6.0.3 with existing license server (before V6.0.3).

Fixes

- For usage of Access databases, requirements with attributes can be assigned without any problems.

TEMPPO 6.0.2

Fixes

- Integration of features and fixes in V5.8, e.g. improvement of opening test structures, attributes are inserted correctly in reports, improvement of loading projects in Administrator.
- Checkbox "Hide empty sub-trees" for filter is available.
- Apply requirement updates is corrected concerning SQL Server 2005.

TEMPPO 6.0.1

Rebranding

- Rebranding to from SiTEMPPO to TEMPPO is done!

SiTEMPPO 5.9.17

Fixes

- Modifications of JDBC driver for PostgreSQL database has to be adapted on SiTEMPPO side, too.

SiTEMPPO 5.9.16

Fixes

- A new JDBC driver for PostgreSQL database is now available.

SiTEMPPO 5.9.15

Fixes

- Creating a test structure based on a requirement structure works now free from any error.

SiTEMPPO 5.9.14

Features

View concept: SiTEMPPO Requirement Manager was extended by the so called "View concept". When creating a baseline additionally a view can be created which is represented by a filter. E.g., if not all requirements are planned for test, a view is stored to the new version and in SiTEMPPO test cases can be tested against those requirements.

SiTEMPPO 5.9.13

Fixes

Report generation works now fine again, since new feature "Evaluation->Progress charts -> Execution progress..." caused side effects.

SiTEMPPO 5.9.12

Features

"Evaluation->Progress charts -> Execution progress..." was extended by a new tab "Detailed data" where test cases plus results are listed as table which can be stored as csv file.

Creating a new test suite is supported by filter. Complex logical criteria are often defined as filter which should later be used also for creating a test suite. Test suite wizard provides now a filter selection instead of manual entering the criterion.

SiTEMPPO 5.9.11

Features

A new lock type "Version" avoids creating new test structure versions by 2 or more users at the same time.

User names can contain special characters like '-'.

Fixes

- SiTEMPPO Requirement Manager: Analysis works correctly for "Planned coverage".
- During a XML import an overlong "Actual result" is shortened correctly and causes no more problems.
- Over all number of test cases is now correct in reports of filtered test structures or test suites.
- In multi-selection mode of test structure and multi-selected requirements causes a click into any requirement cell no more problems.

SiTEMPPO 5.9.10

Fixes

- Uploading of files to the database in the course of creating a hyperlink works now again correctly.
