EasyAudit Quick Start

Introduction

This help documentation is to support the use of Woodward Associates EasyAudit application, a tool to help an auditor to produce error reports based upon re-coded clinical data.

EasyAudit provides a simple way of importing Trust data into an environment aimed to assist in performing a coding audit, and to produce error reports that include HRG impact.

The general work-flow for using the application is:

- [Installing and starting EasyAudit](#)
*There is a Guest user account - with a blank password
To create your own user account you will need to obtain a [registration key](#)*
- [Import an audit dataset](#)
*The dataset will need to conform to the [expected layout](#)
A sample data set is provided for the Guest user account to test*
- [Auditing imported data](#)
Opening an episode for the first time will mark the audit as started
- [Complete an audit](#)
- [Merge audit results](#)
If there are completed audits from more than multiple locations
- [Reporting on an audit dataset](#)
*Report on the currently audited record
Report upon all records where the recoding has impacted upon the HRG
Produce a summary report of the error code breakdown by specialty*
- [Exporting an audited dataset](#)

Throughout this documentation, the following conventions are used:

[Underlined coloured](#) text is a clickable link to another section of the documentation.

Bold text refers to screen text or controls.

Italicised text is important or useful information.

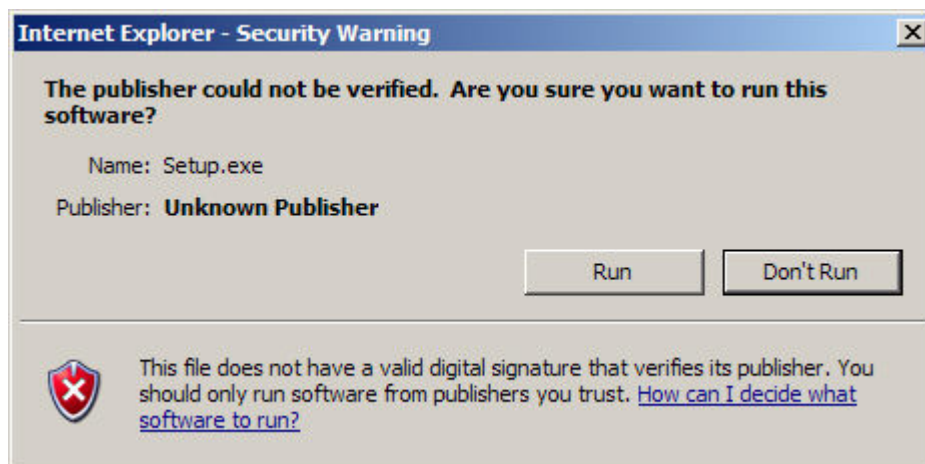

[Read the licence agreement](#)

Installation and Starting

Installation

1. Download the application from the Woodward Associates website.

If you are presented with the options to **Run** or **Save** the file, or to **Run** or **Don't Run** the application, select **Run** in each case.

2. Follow the on-screen instructions to install the application to the desired location and Program Group.

Start-up

1. Click upon the EasyAudit program icon installed within the Start Menu Program Group that was selected during installation, or the icon upon the desktop.

2. At the prompt enter the **Username** and if this is the first time you have logged on press the **Reset Password** button. In the **Registration Code** area that appears type the [key you have been supplied with](#) along with the details that you provided when registering in the accompanying boxes. Finally type a memorable **Password** and press the **Login** button.

*If you just wish to trial the software, you may login with the **Username** "Guest" and enter a blank password.*

Uninstallation

1. Click upon the Uninstall icon that will be present in the Start Menu Program Group that was selected during installation.

Obtaining A Registration Key

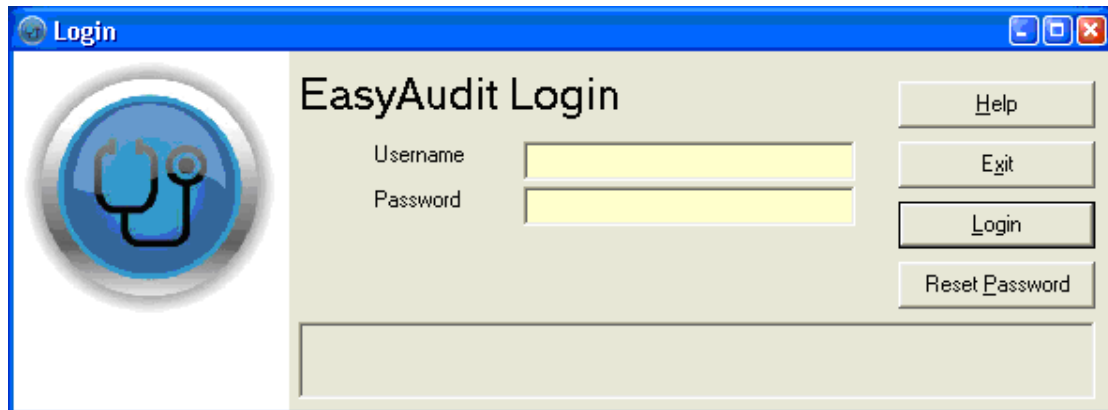

To obtain a registration key please contact the [support desk](#).

Please state your chosen user name:

- Submissions to another body such as the Audit Commission will contain your user name
- Your user name is case sensitive - so "John" is not the same as "john"
- Spaces are significant

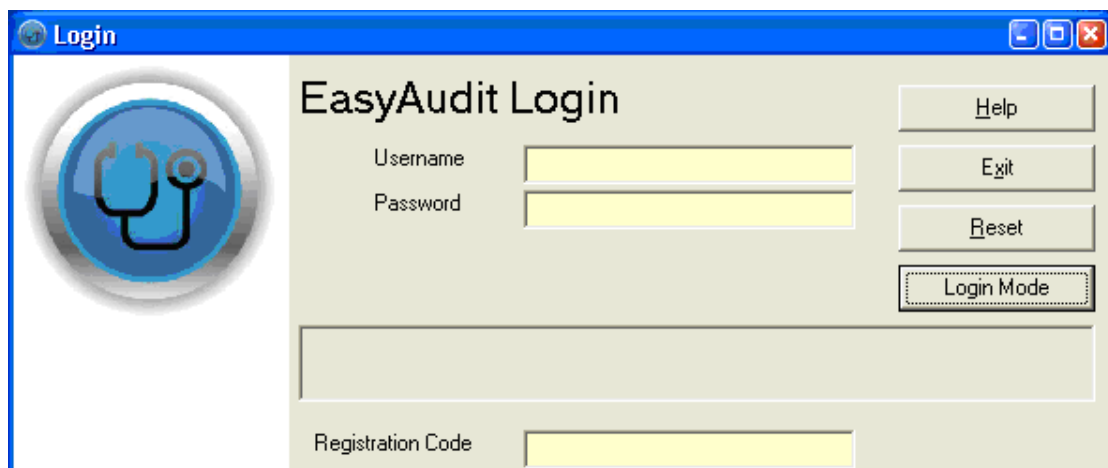

It is suggested that your capitalized first and last names like JohnSmith with no spaces is used.

Resetting your password

The screenshot shows the 'EasyAudit Login' window. On the left is a circular logo with a blue background and a white stethoscope. To the right of the logo, the title 'EasyAudit Login' is displayed. Below the title are two input fields: 'Username' and 'Password'. To the right of these fields are four buttons: 'Help', 'Exit', 'Login', and 'Reset Password'. The 'Reset Password' button is highlighted with a yellow background.

Click the **Reset Password** button.

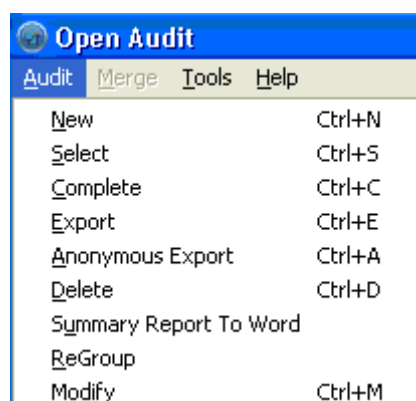

The screenshot shows the 'EasyAudit Login' window after clicking the 'Reset Password' button. The 'Username' and 'Password' fields remain. A new 'Registration Code' field has appeared at the bottom. The 'Reset' button is now highlighted with a yellow background, and the 'Login Mode' button is visible below it. The 'Help' and 'Exit' buttons remain at the top right.

Now type in your **Username**, **Registration Code** and your new **Password** and press **Reset**. If you don't have or can't remember your Registration key then obtain one as detailed in the [Obtaining A Registration Key section](#).

Importing

1. To import data that has been prepared to be in the [correct format](#), from the **Audit** menu on the [Open Audit screen](#), select **New**.

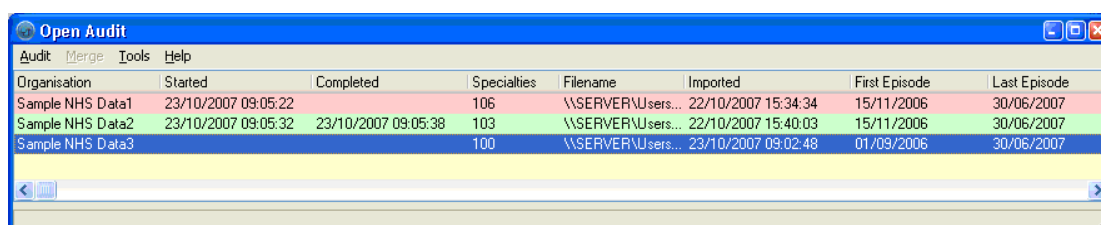

2. On the [New Audit screen](#) that appears, press the **Browse** button and select the pre-prepared input file.

3. If the first line in the input file lists the field names, click on the **File contains header row** checkbox.
4. If the data has been produced or modified in an application that may have produced an irregular number of fields across records (such as in Excel where empty fields at the end of a record are often lost during a save), make sure that the **Fill blank column** checkbox is ticked.
5. **Use PatientID** can be unchecked if it is known that there are absolutely no duplicate episode numbers across spells in the input file. If at all unsure leave this checkbox ticked.
6. Using the **Organisation** drop down box, select the organisation code appropriate for the Trust from which the data originates. The accompanying text box will display the associated name of the organisation.
7. In the **Source Documentation** drop down box, select the main form of documentation from which the re-coding will be performed from. This can be one of; Clinical Record, Pro-Forma, Discharge Summary, Discharge Letter, or Other. If Other is selected, the precise description must be entered in the **Other (please specify)** text box below.
8. Within the **Specialties** list, highlight the specialties that are to be audited within the import dataset by clicking upon them with the mouse. To select more than one, hold the CTRL key whilst clicking. You can also [change the specialty](#) selection later
9. Finally click upon the **Load** button to import the new audit dataset. Any problems encountered will be shown in the **Messages** area, whilst data issues will be shown in the **Validation** area.

Any error or validation messages can be copied to the clipboard by pressing on the relevant button, these can then be pasted into another application such as Microsoft Word or Outlook.

Auditing Records

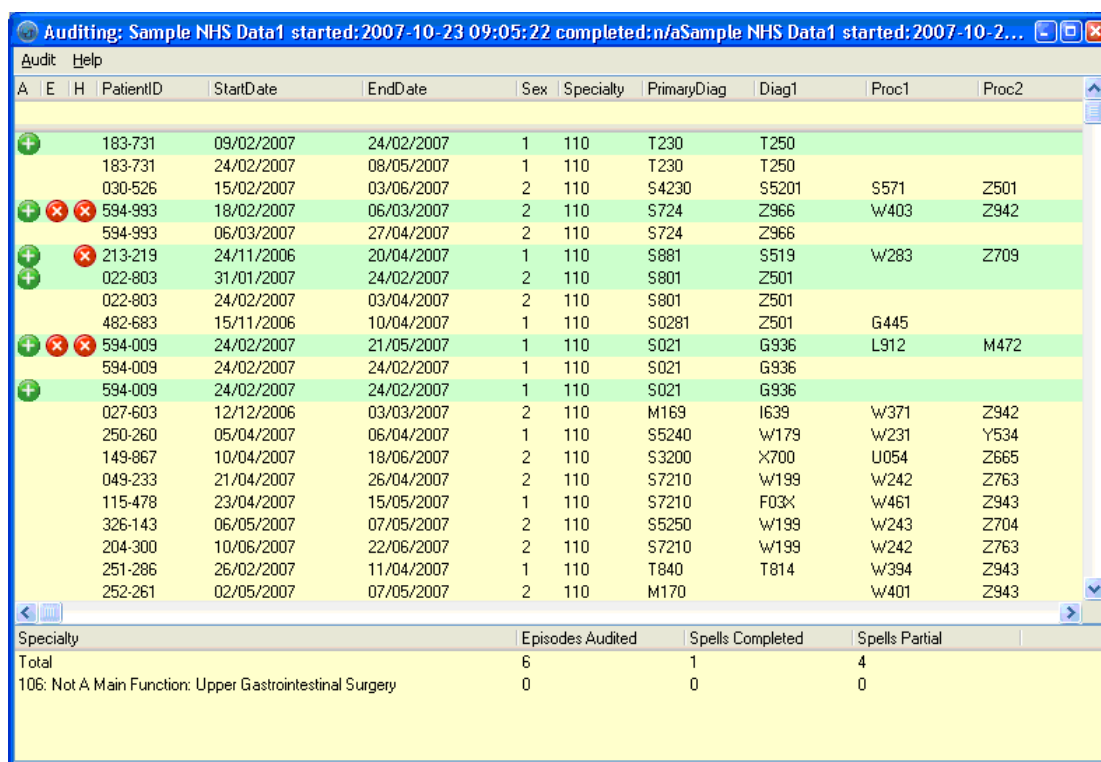

1. On the [Open Audit screen](#), double-click the audit that you wish to work upon.

Organisation	Started	Completed	Specialties	Filename	Imported	First Episode	Last Episode
Sample NHS Data1	23/10/2007 09:05:22		106	\\SERVER\Users...	22/10/2007 15:34:34	15/11/2006	30/06/2007
Sample NHS Data2	23/10/2007 09:05:32	23/10/2007 09:05:38	103	\\SERVER\Users...	22/10/2007 15:40:03	15/11/2006	30/06/2007
Sample NHS Data3			100	\\SERVER\Users...	23/10/2007 09:02:48	01/09/2006	30/06/2007

2. From the resulting [Select Record screen](#), double-click upon a record to open it within the [Worksheet screen](#) for auditing.

The columns within the header bar at the top of the record display can be clicked upon to order the data to assist in locating the corresponding record to the documentation you are re-coding from. Values can also be entered in the space below the header to filter the display of records.

Comments

You will then be returned to the [Select Record screen](#), with the record that has just been saved now highlighted in green to indicate that it has been audited. If errors were found during the re-coding there will also be a red icon with a cross in the **E** column as an indication. If these led to a difference in HRG assignment, there will be a similar red icon in the **H** column against that record.

Reporting

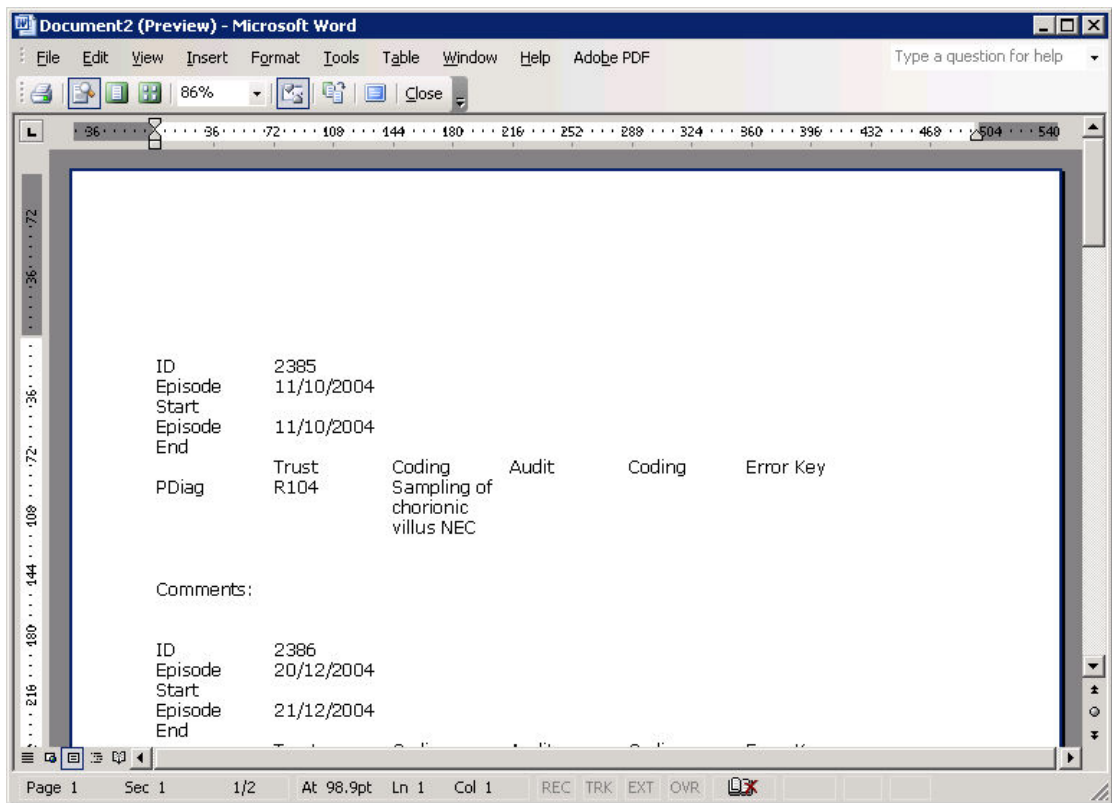

Audit Error Report

Selecting the Summary Report To Word option from the [Open Audit screen](#) will produce an Audit Error report in MS Word for the currently selected audit. All counts and calculations will have been pre-calculated and completed in the report.

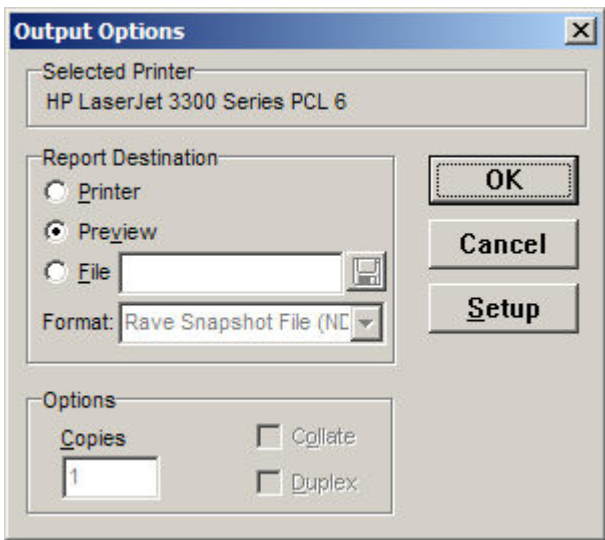

Record Summary Report

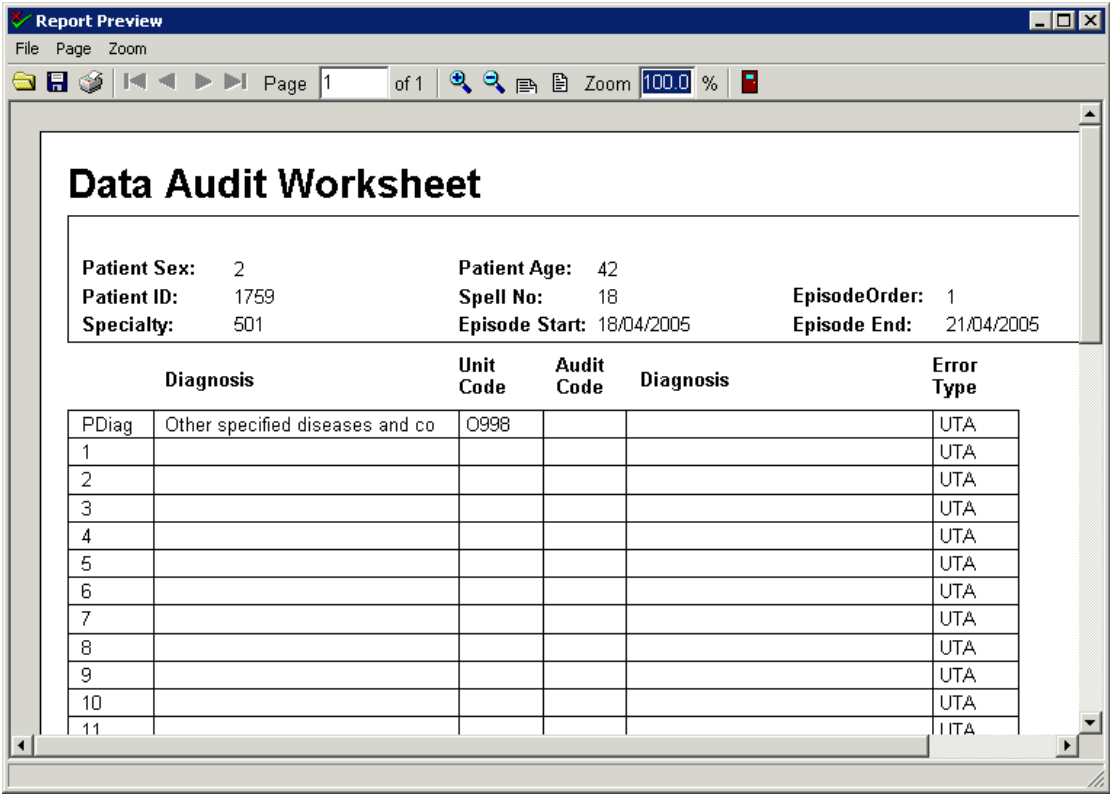

Selecting the Export Selected Episodes to Word option from the [Select Record screen](#) will create a summary report for the selected records within MS Word.

Worksheet Report

Pressing the Report button on the [Worksheet screen](#) will display a small dialog box that will allow selection of whether the Worksheet Report is sent to the printer, a file or to a preview that can subsequently be printed.

Exporting

Either the entire audit can be exported to a CSV file suitable for import into a spreadsheet such as MS Excel or a database such as MS Access, or select records can be exported directly into MS Word.

To Export the Entire Audit

1. On the [Open Audit screen](#), select the audit that you wish to export.

2. If the data must retain patient identifiers then select **Export** from the **Audit** menu, otherwise select **Anonymous Export** which will blank out the [Patient ID](#) field on all exported records.

3. In the **Filename** box that appears, either enter a valid export filename or press the **Browse** button and select an export file.

4. Press the **Export** button - this will produce a CSV file with the filename you specified that is suited to being opened within other spreadsheet or database applications.

To Export Select Records

1. Open the [Select Record screen](#) for the desired audit.

Total	6	1	4
106: Not A Main Function: Upper Gastrointestinal Surgery	0	0	0

2. From the **Audit** menu, select the option that corresponds to the subset of data you wish to export:

- **Select Errors** will automatically highlight all the records that have been audited and marked as having an error.
- **Select Audited** will automatically highlight all the records that have been audited, regardless of whether they have an error or not.

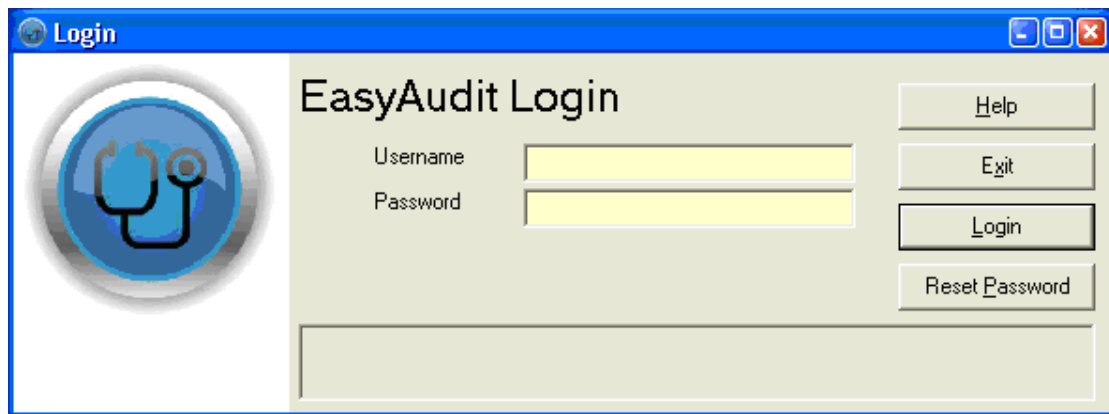

Alternatively the specific records that are wanted in the export can be manually highlighted using the mouse.

3. From the **Audit** menu, select **Export Selected Episodes to Word** to produce a document containing the coding summary and commentary for each record currently selected.

EasyAudit User Guide

Logging In

If this is the first time the application has been run it will need to be [registered](#), otherwise enter your **Username** and **Password** and then press the **Login** button.

After a successful login, the [Open Audit screen](#) will initially be displayed.

Pressing the **Exit** button will close the EasyAudit application.

Pressing the **Help** button will launch the help system.

Pressing the **Reset password** button will allow you to [reset your password](#) .

New Audit Screen

In the **Filename** area either type the name and location of the audit data file that is to be imported, or press the **Browse** button and select the file from the file browser.

If the first row of the audit data file is a list of field names, click on the **File contains header row** checkbox. This will prevent the first row from being loaded as a record of data and will use the data item field names to validate that columns are correct when loading.

If the input file contains varying numbers of fields, ticking the **Fill blank column** checkbox will fill missing fields with blanks, allowing the import to proceed.

Prior to loading a dataset the originating organisation must be identified by selecting it within the **Organisation** drop-down list. The associated Trust name will be displayed in the adjacent text area.

Selecting a document type from which the coding will be performed from the **Source Documentation** drop-down list will use this as a default throughout

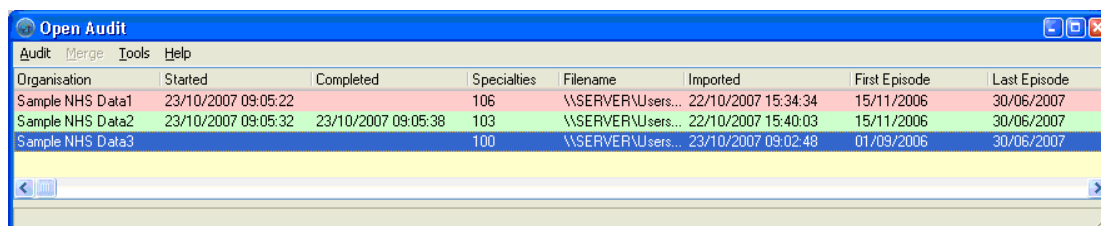

the audit. The available options are; Clinical Record, Pro-Forma, Discharge Summary, Discharge Letter, and Other. If Other is specified, a more precise description must be entered in the **Other (please specify)** text area.

Within the **Specialties** list box, select the specialty codes that are to be audited. To select multiple specialties, hold the CTRL key whilst clicking, or hold the SHIFT key and click to select contiguous ranges.

Finally click upon the **Load** button to import the data and create a new audit. Any errors will be listed in the **Messages** area.

Press **Cancel** to close this screen and return to the [Open Audit screen](#).

Open Audit Screen

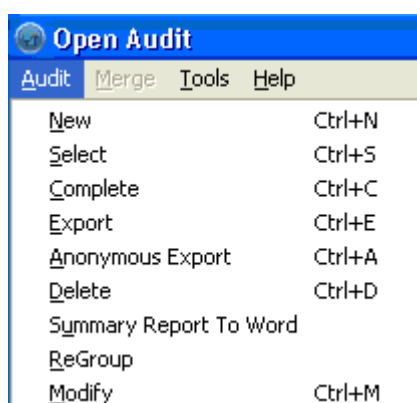

Organisation	Started	Completed	Specialties	Filename	Imported	First Episode	Last Episode

Modify Audit Screen

This screen allows the specialties included within a particular audit to be altered. Selecting specialties in the **Specialties not included in audit** or the **Specialties Included In Audit** areas and then pressing the >> or << buttons will move the selection from in or out of the currently loaded audit.

You will not be able to remove specialties that already have audit information against them, to do so you will need to clear that audit information first.

When changes have been made, pressing the **Save** button will make the appropriate changes to the specialties within the audit and close this screen. Pressing **Cancel** will abandon any unsaved changes and will close the screen.

The episode display list at the foot of the [Select Record Screen](#) will reflect any changes made to the specialties included within an audit.

Specialty	Episodes Audited	Spells Completed	Spells Partial
Total	6	1	4
106: Not A Main Function: Upper Gastrointestinal Surgery	0	0	0

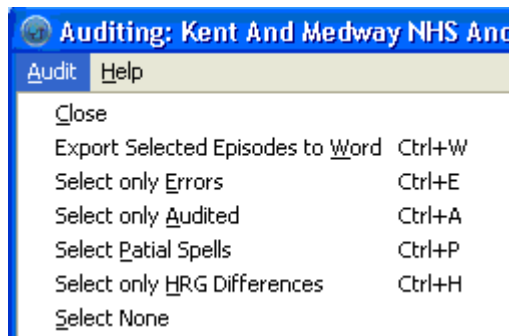

This screen displays the records within the currently selected audit. Records that have already been audited are highlighted in green and additionally have a green plus icon in the **A** column. Those that have been audited and have errors recorded additionally have a red cross icon in the **E** column. Where there are differences in the original HRG and that derived from the audited record, a red cross icon will be displayed within the **H** column.

Double-clicking upon a record will open it within the [Worksheet screen](#) for auditing.

The list can be sorted by any of the items displayed by clicking upon the header bar. Values can also be entered in the space below the header to filter the display of records.

Towards the bottom of the screen is an area that displays a summary of the number of records within each specialty that have been audited.

Audit Menu

Close	Closes this screen
Export Selected Episodes to Word	Produces a summary report of the currently selected records in MS Word
Select only Errors	Selects only the records that are marked as having a coding error
Select only Audited	Selects only the records that are marked as audited
Select Partial Spells	Selects the records that seem to have partial spells
Select only HRG Differences	Selects only the records that have HRG differences
Select none	resets any previous select menu view

Comments

The Worksheet screen displays the coding information for a selected record and provides space in which to provide audited re-coding.

Upon the left hand side of the screen is summary information covering the administration information from the record for reference purposes.

If the reference material differs to that displayed within the **Source Documentation** drop-down box, the appropriate source can be altered for this record. Doing this not affect the default that was selected when the audit was created.

If the record cannot be audited, the **Unsafe To Audit** checkbox can be checked to automatically fill in the [Unsafe to Audit error code](#) in all coding fields.

Towards the right hand side of the screen are the areas where re-coding can be entered along with the appropriate [error code](#) where differences have been found. The **Copy Trust Codes** button can be pressed to duplicate all the original coding for the re-coding fields, and pressing **Clear Audit** will blank them out. As re-coding is entered, the HRG groups within the **HRG Analysis** section will be updated accordingly.

Clicking in the space provided for **Error Key** will display a drop-down list of valid [error codes](#) for quick selection.

Additional supporting notes can be typed within the **Comments** text area.

Once a record has been completely audited, press the **Save** button to record the re-coding and to close this screen. Alternatively press **Cancel** to close this screen without saving any re-coding.

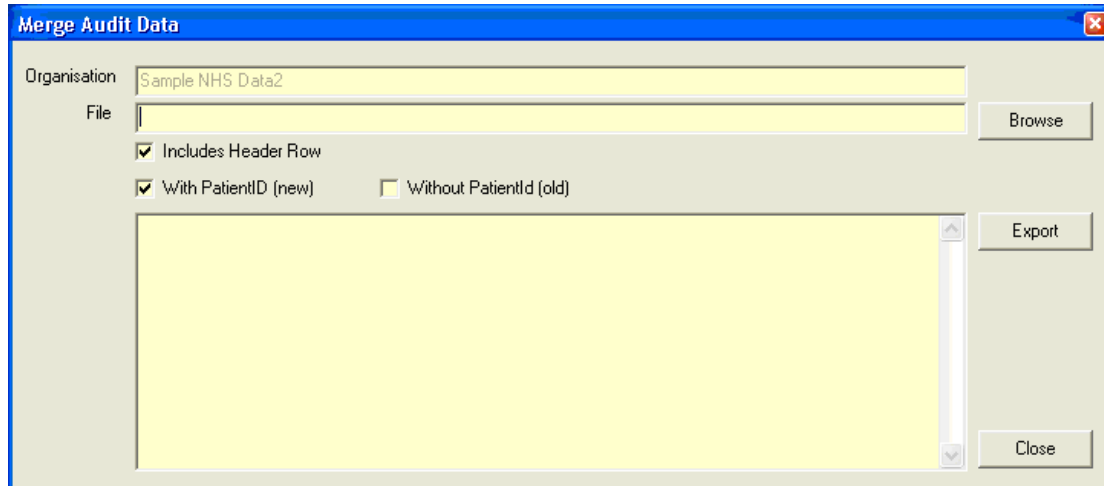

Pressing **Report** will produce the [Worksheet Report](#) for the currently selected audit.

Pressing the **Help** button will display the online version of this help documentation.

Merge Audit Data Screen

This screen is displayed when exporting or importing a completed audit for merging within EasyAudit.

Exporting

The screenshot shows a Windows-style dialog box titled "Merge Audit Data". It has a blue title bar with a close button (X) in the top right corner. The main area is light gray. At the top, there's a label "Organisation" followed by a text box containing "Sample NHS Data2". Below this is a label "File" followed by an empty text box. To the right of the "File" text box is a "Browse" button. Below the "File" text box are two checkboxes: "Includes Header Row" (checked) and "With PatientID (new)" (checked). To the right of "With PatientID (new)" is an unchecked checkbox labeled "Without PatientID (old)". Below these checkboxes is a large, empty text box with a vertical scrollbar on the right. To the right of this large text box are two buttons: "Export" and "Close".

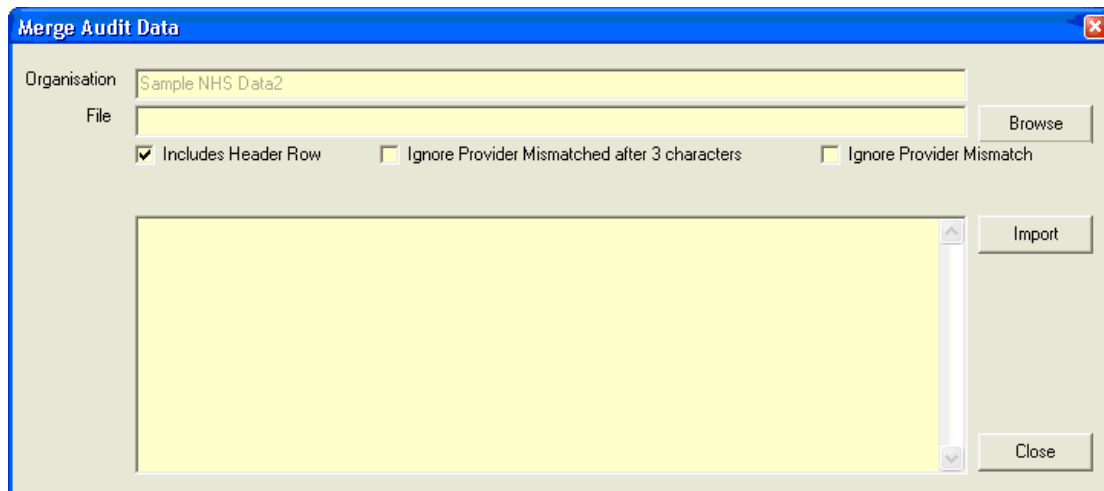

When exporting a completed audit, the name of the selected provider will be displayed in the **Organisation** area. Pressing the **Browse** button and selecting a file, or typing a valid output name and location in the adjacent **File** area will specify where the exported audit will be written to.

Ticking the **Includes Header Row** checkbox will create an additional record at the top of the output file that contains the names of the fields.

The **With PatientID (new)** or **Without PatientID (old)** checkboxes control whether the export merge dataset will be created with or without the PatientID being included for use as part of the spell identifier.

Finally, pressing **Export** will write the audit to the specified file. Any problems will be reported in the adjacent area.

Importing

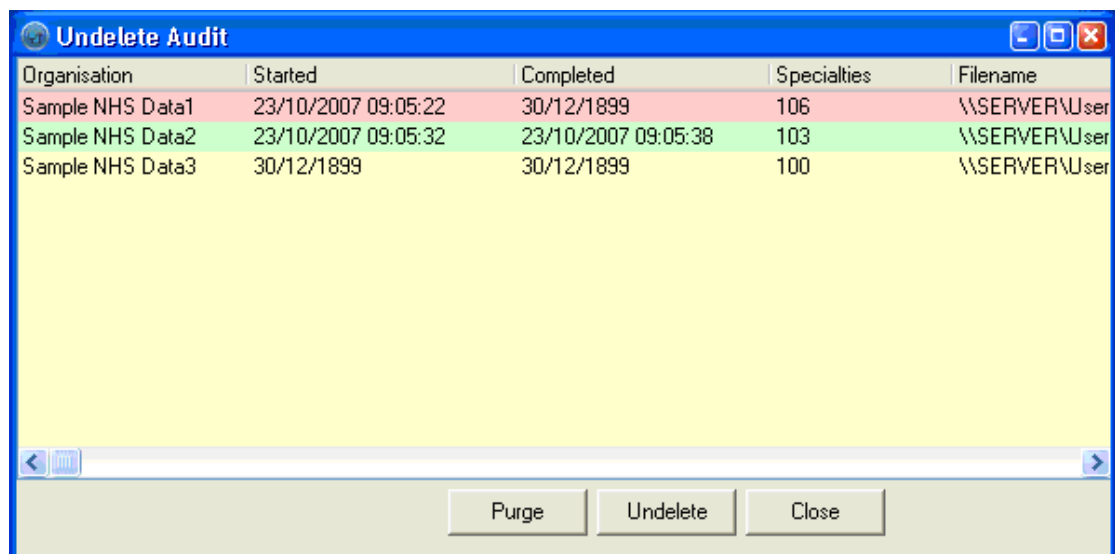

When importing and merging a completed audit, the name of the selected provider will be displayed in the **Organisation** area. Pressing the **Browse** button and selecting a file, or typing a valid output name and location in the adjacent **File** area will specify which file contains the data to be merged with the currently selected audit.

Ticking the **Includes Header Row** checkbox will use the field names in the first record in the input file to be used for validation that field positions are correct. **Ignore Provider Mismatched after 3 characters** will cause the import to ignore the site portion of the organisation code, minimising the number of errors that would be reported if multi-site provider data is being imported. **Ignore Provider Mismatch** will perform the import merge regardless of the precise provider code in the dataset.

Pressing **Import** will read in the data from the specified file, merging the records with the currently selected audit. Any problems will be reported in the adjacent area.

Undelete Audit Screen

This screen allows the restoration of previously deleted audits. Selecting one within the list and then pressing the **Undelete** button will return that audit into the active list on the [Open Audit screen](#). Pressing the **Purge** button will completely remove the selected audit - it will no longer be available for undeletion.

Purging an audit is an irreversible action.

EasyAudit Reference

Error Key Descriptions

Unsafe to Audit Error Key

UTA	UNSAFE TO AUDIT The auditor is unable to audit the coded clinical data against the source documentation. For example: <ul style="list-style-type: none"> • There is no clinical information regarding the episode in the auditor's source documentation to support the auditors code assignment.
------------	--

Primary Diagnosis Error Keys

Coder Error	
PD3	PRIMARY DIAGNOSIS INCORRECT AT THREE CHARACTER LEVEL The primary diagnosis code has been allocated to an incorrect three character code. Or, where it is clear the code allocated to classify the disease or health related problem is incorrect at third character level and incorrectly sequenced within a secondary field.
PD4	PRIMARY DIAGNOSIS INCORRECT AT FOUR CHARACTER LEVEL The primary diagnosis code has been allocated to an incorrect fourth character. Or, where it is clear the code allocated to classify the disease or health related problem is incorrect at fourth character level and incorrectly sequenced within a secondary field.
PD5	PRIMARY DIAGNOSIS INCORRECT AT FIVE CHARACTER LEVEL The primary diagnosis code has been allocated to an incorrect fifth character. Or, where it is clear the code allocated to classify the disease or health related problem is incorrect at fifth character level and incorrectly sequenced within a secondary field.
PDIS	PRIMARY DIAGNOSIS INCORRECTLY SEQUENCED The primary diagnosis code recorded by the auditor has been accurately coded but not sequenced as the primary diagnosis by the coder.
PDO	PRIMARY DIAGNOSIS OMITTED The primary diagnosis recorded by the auditor has not been recorded by the coder in any diagnosis field.
Non-Coder Error	
PDI	INFORMATION AVAILABLE AT THE TIME OF AUDIT NOT AVAILABLE AT THE TIME OF CODING

	<p>Information available to the auditors was not available at the time of coding. This is where information regarding the episode became available after the episode was coded. This error key is not to be used if the information was not accessed by the clinical coder at the point of coding, for example, with histopathology reports.</p> <p>This error key would also be assigned by the auditor when the source documentation used at the time of coding did not contain all pertinent information required for accurate and complete coding and the coder did not have access to this information, for example, coding from proforma with no access to the casenotes.</p>
PDD	<p>PRIMARY DIAGNOSIS DOCUMENTATION ISSUE</p> <p>The auditor's code allocated from the source documentation differs from that of the Trusts due to unclear or inconsistent information.</p> <p>For example:</p> <ul style="list-style-type: none"> • Inconsistency between information recorded by clinical staff contained on source documentation and it is not clear which is correct • The source documentation is illegible.
PDM	<p>PRIMARY DIAGNOSIS CODED TO MANAGEMENT SPECIFICATION</p> <p>There is a clear and documented directive from management to contravene coding to national standards.</p> <p>For example:</p> <ul style="list-style-type: none"> • by unbundling diagnoses or procedures into component parts • by adding or optimising the coded clinical data to alter the derived HRG .
PDC	<p>PRIMARY DIAGNOSIS CODED TO CLINICIAN SPECIFICATION</p> <p>There is a clear and documented directive from clinicians to contravene coding to national standards or capture those instances where a clinician has requested that coding be done in a particular way as it more accurately captures the diagnosis.</p> <p>For example:</p> <ul style="list-style-type: none"> • by unbundling diagnoses or procedures into component parts.
PDSC	<p>PRIMARY DIAGNOSIS CODED DUE TO SYSTEM CONSTRAINT</p> <p>Due to the system that the Organisation uses the primary diagnosis codes is technically incorrect at some level, omitted or sequenced incorrectly.</p>

Secondary diagnosis error key descriptions

Coder Error	
SD3	<p>SECONDARY DIAGNOSIS INCORRECT AT THREE CHARACTER LEVEL</p> <p>The secondary diagnosis code has been allocated to an incorrect three character code.</p> <p>Or, where it is clear the code allocated to classify the disease or health related problem is incorrect at third character level and incorrectly sequenced.</p>

SD4	SECONDARY DIAGNOSIS INCORRECT AT FOUR CHARACTER LEVEL The secondary diagnosis code has been allocated to an incorrect four character code. Or, where it is clear the code allocated to classify the disease or health related problem is incorrect at fourth character level and incorrectly sequenced.
SD5	SECONDARY DIAGNOSIS INCORRECT AT FIVE CHARACTER LEVEL The secondary diagnosis code has been allocated to an incorrect five character code. Or, where it is clear the code allocated to classify the disease or health related problem is incorrect at fifth character level and incorrectly sequenced.
SDNR	SECONDARY DIAGNOSIS NOT RELEVANT The secondary diagnosis code recorded by the coder is not relevant to the episode of care.
SDO	SECONDARY DIAGNOSIS OMITTED Diagnosis that has been recorded by the auditor as relevant but is missing from the Organisation's recorded episode.
SDIS	SECONDARY DIAGNOSIS INCORRECT SEQUENCING The sequencing of the secondary codes contravenes national standards. This error key can only be assigned for error in the following national standards: 1. Outcome of delivery (Z37 and Z38 if not well baby) 2. Asterisk codes must be preceded by a dagger code 3. Specific coding conventions in ICD-10 i.e. use additional code 4. Extent of body surface in burns (T31, T32)
ECI	EXTERNAL CAUSE CODE INCORRECT The external cause code recorded by the Organisation is incorrect at any character level.
ECO	EXTERNAL CAUSE CODE OMITTED The external cause code has been omitted from the Organisation's recorded episode.
ECNR	EXTERNAL CAUSE CODE NOT RELEVANT The external cause code recorded by the coder is not relevant to the episode of care.
Non-Coder Error	
SDI	INFORMATION AVAILABLE AT THE TIME OF AUDIT NOT AVAILABLE AT THE TIME OF CODING See PDI.
SDD	SECONDARY DIAGNOSIS DOCUMENTATION ISSUE The auditor's code allocated from the source documentation differs from that of the Trusts due to unclear or inconsistent information. For example: <ul style="list-style-type: none"> • Inconsistency between information recorded by clinical staff contained on source documentation and it is not clear which is correct • The source documentation is illegible.

SDM	SECONDARY DIAGNOSIS CODED TO MANAGEMENT SPECIFICATION There is a clear and documented directive from management to contravene coding to national standards. For example: <ul style="list-style-type: none"> • by unbundling diagnoses or procedures into component parts • by adding or optimising the coded clinical data to alter the derived HRG.
SDC	SECONDARY DIAGNOSIS CODED TO CLINICIAN SPECIFICATION There is a clear and documented directive from clinicians to contravene coding to national standards or capture those instances where a clinician has requested that coding be done in a particular way as it more accurately captures the diagnosis. For example: <ul style="list-style-type: none"> • by unbundling diagnoses or procedures into component parts.
SDSC	SECONDARY DIAGNOSIS CODED DUE TO SYSTEM CONSTRAINT Due to the system that the Organisation uses, codes are technically incorrect at some level, omitted or sequenced incorrectly.

Primary procedure error key descriptions

Coder Error	
PP3	PRIMARY PROCEDURE INCORRECT AT THREE CHARACTER LEVEL The primary procedure code has been allocated to an incorrect three character code. Or, where it is clear the code allocated to classify the procedure or intervention is incorrect at third character level and incorrectly sequenced within a secondary field.
PP4	PRIMARY PROCEDURE INCORRECT AT FOUR CHARACTER LEVEL The primary procedure code has been allocated to an incorrect four character code. Or, where it is clear the code allocated to classify the procedure or intervention is incorrect at fourth character level and incorrectly sequenced within a secondary field.
PPIS	PRIMARY PROCEDURE INCORRECTLY SEQUENCED The primary procedure or intervention code recorded by the auditor has been accurately coded but not sequenced as the primary procedure by the coder.
PPO	PRIMARY PROCEDURE OMITTED The primary procedure recorded by the auditor has not been recorded by the coder in any procedure field.
PPNR	PRIMARY PROCEDURE NOT RELEVANT The primary procedure recorded by the coder is not relevant to the episode of care.
Non-Coder Error	
PPI	INFORMATION AVAILABLE AT THE TIME OF AUDIT NOT

	AVAILABLE AT THE TIME OF CODING See PDI.
PPD	PRIMARY PROCEDURE DOCUMENTATION ISSUE The auditor is unable to code the clinical data from the source documentation and compare against that of the Trusts due to unclear or inconsistent information. For example: <ul style="list-style-type: none"> • Inconsistency between information recorded by clinical staff contained on the source documentation and it is not clear which is correct • The source documentation is illegible.
PPM	PRIMARY PROCEDURE CODED TO MANAGEMENT SPECIFICATION There is a clear and documented directive from management to contravene coding to national standards. For example: <ul style="list-style-type: none"> • by unbundling diagnoses or procedures into component parts • by adding or optimising the coded clinical data to alter the derived HRG.
PPC	PRIMARY PROCEDURE CODED TO CLINICIAN SPECIFICATION There is a clear and documented directive from clinicians to contravene coding to national standards or capture those instances where a clinician has requested that coding be done in a particular way as it more accurately captures the intervention that occurred. For example: <ul style="list-style-type: none"> • by unbundling diagnoses or procedures into component parts.
PPSC	PRIMARY PROCEDURE CODED DUE TO SYSTEM CONSTRAINT Due to the system that the Organisation uses codes are technically incorrect at any level, omitted or sequenced incorrectly.

Secondary Procedure error key descriptions

Coder Error	
SP3	SECONDARY PROCEDURE INCORRECT AT THREE CHARACTER LEVEL The secondary procedure code has been allocated to an incorrect three character code. Or, where it is clear the code allocated to classify the procedure or intervention is incorrect at third character level and incorrectly sequenced.
SP4	SECONDARY PROCEDURE INCORRECT AT FOUR CHARACTER LEVEL The secondary procedure code has been allocated to an incorrect four character code. Or, where it is clear the code allocated to classify the procedure or intervention is incorrect at fourth character level and incorrectly sequenced.
SPIS	SECONDARY PROCEDURE INCORRECTLY SEQUENCED The Organisation has not sequenced the procedure coding

	<p>according to the rules and conventions of the classification. For example:</p> <ul style="list-style-type: none"> • See use as secondary code when associated with...
SPO	<p>SECONDARY PROCEDURE OMITTED Secondary procedure that has been recorded by the auditor as relevant but is missing from the Organisation's recorded episode.</p>
SPNR	<p>SECONDARY PROCEDURE NOT RELEVANT The secondary procedure code recorded by the coder is not relevant to the episode of care.</p>
Non-Coder Error	
SPI	<p>INFORMATION AVAILABLE AT THE TIME OF AUDIT NOT AVAILABLE AT THE TIME OF CODING See PDI.</p>
SPD	<p>SECONDARY PROCEDURE DOCUMENTATION ISSUE The auditor is unable to code the clinical data from the source documentation and compare against that of the Trusts due to unclear or inconsistent information. For example:</p> <ul style="list-style-type: none"> • Inconsistency between information recorded by clinical staff contained on the source documentation and it is not clear which is correct • The source documentation is illegible.
SPM	<p>SECONDARY PROCEDURE CODED TO MANAGEMENT SPECIFICATION There is a clear and documented directive from management to contravene coding to national standards. For example:</p> <ul style="list-style-type: none"> • by unbundling diagnoses or procedures into component parts • by adding or optimising the coded clinical data to alter the derived HRG.
SPC	<p>SECONDARY PROCEDURE CODED TO CLINICIAN SPECIFICATION There is a clear and documented directive from clinicians to contravene coding to national standards or capture those instances where a clinician has requested that coding be done in a particular way as it more accurately captures the intervention that occurred. For example:</p> <ul style="list-style-type: none"> • by unbundling diagnoses or procedures into component parts.

Import Dataset Format

General requirements

The data supplied for audit must be standard ASCII .

You should have been notified which Specialties are to be audited.

The data must consist of defined data values supplied in a fixed CSV format:

- The columns in which data fields should be provided are fixed
- The values in those columns must conform to Data Dictionary definitions.

If necessary reference can be made to:

<http://www.connectingforhealth.nhs.uk/datadictionary/index.asp>

and

<http://www.hesonline.nhs.uk/>

Data requirements

If any of the following data fields cannot be provided then please notify your auditor immediately (note that if you do not have FCE or Spell HRG these can be left off).

Dates should be formatted as YYYYMMDD.

The data should be provided in the following columns:

Start Column	End Column	Field contents
1		Provider Code (PROCDET)
2		Purchaser (PCT) code
3		Hospital Provider Spell Number (PROVSPNO)
4		Episode Order (EPIORDER)
5		Admission Start Date (ADMIDATE)
6		Admission End Date (DISDATE)
7		Episode Start Date (EPISTART)
8		Episode End Date (EPIEND)
9		Age at start of episode (STARTAGE)
10		Sex (SEX)
11		Patient Classification (CLASSPAT)
12		Admission Source (ADMISORC)
13		Admission Method (ADMIMETH)
14		Discharge Destination (DISDEST)

15		Discharge Method (DISMETH)
16		Episode Duration (EPIDUR)
17		Main Specialty (MAINSPEF)
18		Neonatal level of care (NEOCARE)
19		Treatment Function Code (TRETSPPEF)
20		Legal Status (LEGLSTAT)
21		Consultant Code (CONSULT)
22		Primary diagnosis (DIAG_01)
23	35	13 secondary diagnoses (DIAG_NN)
36	47	12 procedure codes (OPER_NN)
48		Patient ID (to allow Auditor to reference casenotes)
49		FCE HRG (as derived onsite)
50		Spell HRG (as derived onsite)

Licence Agreement

WOODWARD ASSOCIATES EasyAudit SOFTWARE LICENCE AGREEMENT AND PROOF OF LICENCE

This is a legal and non-exclusive agreement between you, the end user and Woodward Associates (UK) Limited ("Woodward Associates ") with regard to your rights to use the accompanying Woodward Associates software product and associated materials and documentation (together referred to as "Licensed Products"). Please carefully read all terms and conditions of this licence agreement ("Licence") before using the software package. Your consent during installation constitutes your acceptance of the terms and conditions of this Licence. If you do not agree with the terms of this Licence, promptly return the Licensed Products to Woodward Associates who will refund in full the price you paid.

1. Licensed Products and Grant of Rights

- i. The Licensed Products comprise the software applications known as the "Woodward Associates EasyAudit" and associated tables and files for the computer hardware specified on the media label.
- ii. The software components of the Licensed Products shall be supplied in the form of binary executable code on appropriate magnetic, digital or optical media.
- iii. In consideration of the Licence Fee, Woodward Associates grants to you a personal, non-exclusive and non-transferable licence to use the Licensed Products and any enhancements or modifications thereto.
- iv. You may use one copy of the Licensed Products on a single computer only.
- v. You may not sublicense the rights granted in this agreement to any third party.
- vi. You may make one copy of the Licensed Products (excluding documentation) for the sole purpose of back-up.
- vii. This Licence is effective from the date on which you receive the Licensed Products and shall remain in force unless terminated. You may terminate it at any time by destroying the Licensed Products together with all copies thereof. This Licence shall also be terminated if you fail to comply with any of the terms and

conditions herein. You agree, upon such termination, to destroy the Licensed Products and any copies thereof.

2. Warranty and Conditional Support

- i. All conditions and warranties, whether express or implied by statute, common law, trade practice or otherwise, shall be construed subject to the terms and conditions of this Agreement and insofar as they are inconsistent with said terms and conditions shall be excluded.
- ii. Woodward Associates warrants that the Licensed Products shall perform substantially in accordance with the written specifications thereof but does not warrant that any software supplied shall be free from error or operate without interruption. There are no other warranties either express or implied at law or otherwise with regard to description or fitness for purpose or merchantable quality for the Licensed Products.
- iii. For a period of one year from the effective date of this Licence and conditional upon you having paid to Woodward Associates the licence fee, Woodward Associates shall :
 - a. correct any defects or errors in the Licensed Products notified to Woodward Associates – remedies for any such defects or errors shall be supplied to you through temporary software patches or new releases of the Licensed Products;
 - b. provide telephone support for the Licensed Products during the hours of 10.00 AM to 5.00 PM, Mondays to Fridays excluding public holidays – such telephone support is limited to advice and consultation on problems or operational difficulties experienced by you in regard to the normal execution of the Licensed Products;
 - c. provide you with a copy of any upgrade or new release of the Licensed Products .

3. Intellectual Property and Copyright

- .You hereby acknowledge that the copyright and other rights in certain components of the Licensed Products supplied to you under this Licence are vested in HM Government (the “Crown”).
- i. All rights (including intellectual property rights and copyright) to any Licensed Products, program materials or documentation and any amendments or enhancements thereto supplied by Woodward Associates to you under this Licence shall remain the property of Woodward Associates or its licensors and no title to, copyright in or ownership of any part of the Licensed Products is hereby transferred to you.
 - ii. The Licensed Products contain proprietary, confidential and trade secret information of Woodward Associates or its licensors. In no event shall you endeavour to discover through reverse engineering or reverse compiling or other techniques or processes the trade secrets contained in the Licensed Products or derive any source code or algorithms therefrom or use any such trade secrets except as expressly provided in this Agreement.

4. Limitations

.In no event will Woodward Associates be liable for any loss or damages including, without limitation, any lost profits, lost savings or other indirect, incidental special or consequential damages arising out of the use or inability to use the Licensed Products even if Woodward Associates has been advised of the possibility of such damages, or for any claim by any other party.

Woodward Associates' total liability for damages hereunder shall in no event exceed the amount paid for the Licensed Products under the terms and conditions of this Agreement.

5. Other Provisions

.You may not use, copy, modify sublicense or transfer this Licence or the Licensed Products except as expressly provided in this Agreement. You acknowledge that you have read this Agreement, understand it and agree to be bound by its terms and conditions.

- i.No waiver of any term or condition of this Agreement shall constitute a continuing waiver.
- ii.The validity, construction and performance of this Agreement shall be governed by the Laws and subject to the Courts of England.
- iii.These terms and conditions shall constitute the entire understanding and agreement between the parties and supersede all prior and contemporaneous proposals, representations, negotiations and communications relating to this Agreement.
- iv.No modification to this Agreement or any of its terms may be made except by express written agreement with Woodward Associates.
- v.If any provision of this Agreement is or becomes unenforceable, that provision shall be deemed to be removed and all other provisions shall continue in full force and effect.

www.woodwardassoc.co.uk

Database Validation Checks

The current database validation checks are:

- Procedure1 lower case "h" removal
Any records with a "h" in the Procedure1 field will be reported, and the option of deleting that character will be given.
- Duplicate record removal
Prior to version 1.0.12 it was possible to introduce duplicate records into the database due to the handling of the comments field. This option will attempt to identify the duplicates and the option of deleting them will be given, if a problem with the identification arises instructions to contact [technical support](#) may be given instead.

Support and Troubleshooting

Release History

Version 1.2.0 (current)

- added support for larger file sets of over 15,000 records
- new grouper HRG handling for erroneous spells with over 77 episodes
- added check for PatientID in spells
- added Ignore Provider Code checkbox to cope with changing identifiers during an audit
- added check for changed codes - but no error key in worksheet saves
- added scroll bars for Merge/Import and re-located to top of message list
- added option (default=on) to separate key values by "_" for a load
- changed load message box to log problems to errors window
- added option (default=on) to add PatientID to key - too many systems have duplicate episode numbers

Version 1.1.0

- added validation on import
- added copy to clipboard buttons for loading errors and validation
- added tariff on worksheet display & report
- added splash screen
- added password reset
- added Guest user
- updated help system
- fixed column alignment on HRG (Trust) on export
- blanked out null dates on audit selection window

Version 1.0.21

- added export fields for completeness
- updated select only errors, select only HRG, select only audited now to only select those episodes

Version 1.0.20

- added export fields for grouper
 - PatClass
 - UTA
- fixed quote handling for organisation name

Version 1.0.19

- updated organisation name to allow longer names
- added preferences turn off formatting for word report
- changed comments to memo type to allow more content

- added select HRG differences - though can already click on the filter for hrg to sort and select.

Version 1.0.18

- added basic formatting to the worksheet word report

Version 1.0.17

- fixed merge comments with quotes both ' on import and " on export
- updated set max 250 chars on comments
- added compact DB
- added backup before validate
- added backup before compact

Version 1.0.16

- added spell HRG calculations

Version 1.0.15

- updated code validation to allows dot codes i.e. J60.9
- added validation for age and epidur to not allow non numeric values
- fixed some spellings
- fixed missing rows in worksheet word export when code and audit code were blank but error code exists - i.e. SDNR
- fixed some minor sizing behaviour - some non-sizeable , others restricted, other anchored
- fixed some titles
- updated so merge only allowed for completed audits - status bar added for hint text
- disable load for user DA
- added function to select episodes part of partial spells

Version 1.0.14

- changed totals to ignore *NR - now % add up without *NR

Version 1.0.13

- added missing ECNR to summary reports for secondary diag
- added error message for non coded error keys
- changed totals to take account of *NR keys with black codes

Version 1.0.12

- update - sort order for specialties on load screen
- fixed transaction issue in worksheet save
- added check DB function for problems in this case - looks for duplicate dpcodes caused by comments bug in worksheet save

- added AuditInputID hint for started column
- added proc1=h validation and removal
- added help button to login screen

Version 1.0.11

- fixed a quote in the comments in worksheet
- added ability to add specialties to the audit
- added ability to compare only to 3rd character on provider for merge/import

Version 1.0.10

- changed grouper interface slightly & rdf files to be in sync

Version 1.0.9

- changed the patient id filter to trim both sides
- added a ErrKey filter
- fixed an OPCS lookup issue (PrimDiag ...) in word export

Version 1.0.8

- limit view to 500 records
- fixed login bug

Version 1.0.7

- added tools: delete, undelete, purge
- added backup mechanism
- changed limit audit display to 100 episodes
- fixed strange focus issue on dialogs
- fixed quotes in the comments export
- updated merge window to be wider
- updated merge window to list all duplicate episodes so they can be fixed in one go
- fixed grouper ini file issue

Known Issues

Installation

1. On start-up one of the following error messages occur

Problem

The "Program Files" default installation location has locally been set to be read-only, either as permissions on the folder or by security policy.

Resolution

Either remove the read-only restriction, or uninstall EasyAudit and re-install it to a completely different location such as "C:\EasyAudit".

Support and Troubleshooting

A helpdesk is available for support issues with this application between 0900 and 1700 Monday to Friday.
