Safety Instructions

Always read the safety instructions carefully

- Keep this User's Manual for future reference
- Keep this equipment away from humidity
- If any of the following situation arises, get the equipment checked by a service technician:
  - The equipment has been exposed to moisture.
  - The equipment has been dropped and damaged.
  - The equipment has obvious sign of breakage.
  - The equipment has not been working well or you cannot get it work according to User's Manual.

Table of Content

Introduction

Universal PCI (UPCI) multi-port serial cards can be installed in PCI or PCI-X slots, and support both 3.3V and 5V PCI/PCI-X. With a UPCI board, you can connect data acquisition equipment and other serial devices to your PC over RS-232, RS-422, or RS-485. Each board has on-chip hardware and software flow control, a built-in 128-byte Tx/Rx FIFO, and well-designed device drivers that have been fine-tuned. This allows UPCI boards to support data transfer rates of up to 921.6 Kb/s.

Hardware Specification

ID-P20011-S1 Specification

Ports	2xRS-232/422/485
Connector	8-pin RJ-45
FIFO	128 bytes
ESD Protection	15KV ESD
Serial Communication Speed	300 bps ~ 921.6 Kbps
Bus Interface	Universal PCI
Operating Temperature	0~55 ℃
Operating Humidity	5~95% RH
Dimensions (LxH)	120x64mm
Regulatory Approvals	FCC/CE

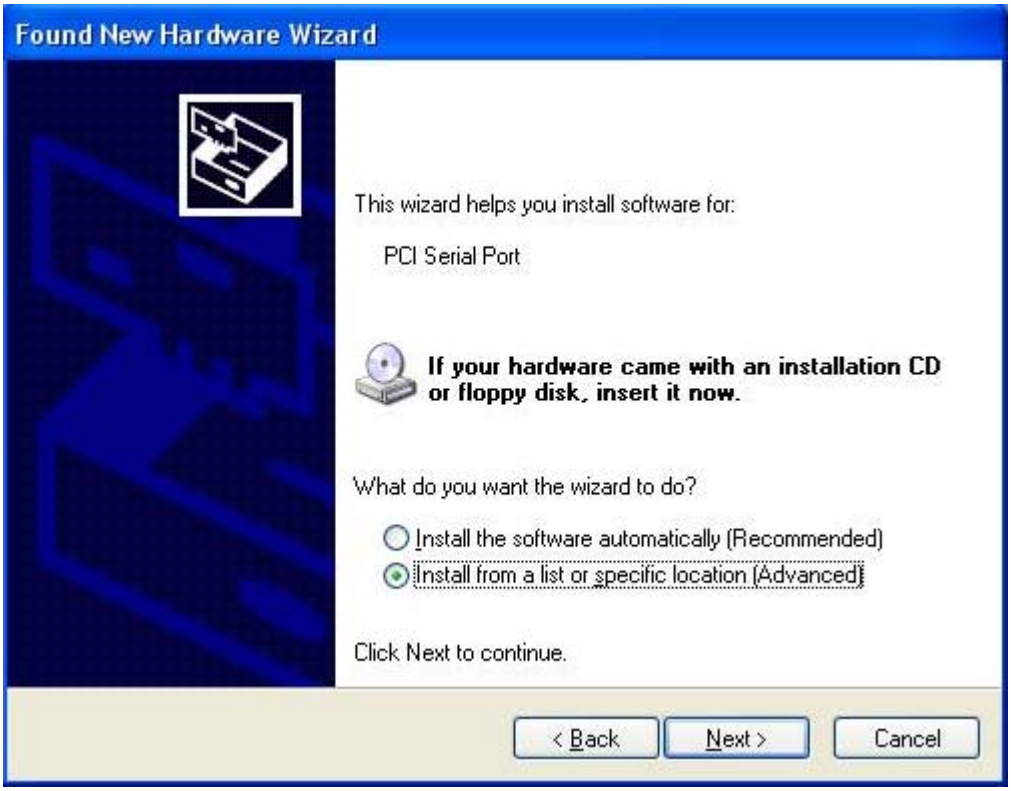
Software Installation

The board MUST be plugged in before installing the driver software.

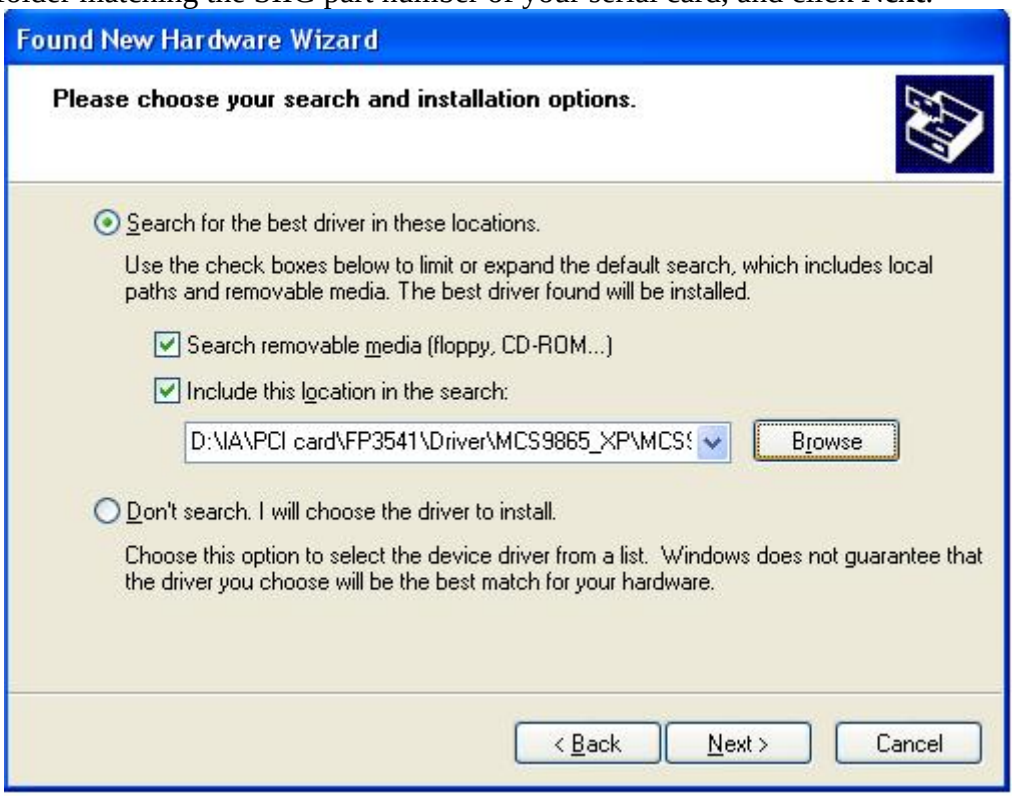
Windows XP and Windows 7 driver installations are given below. The software installation for all other Windows versions will be similar.

Windows XP Driver Installation

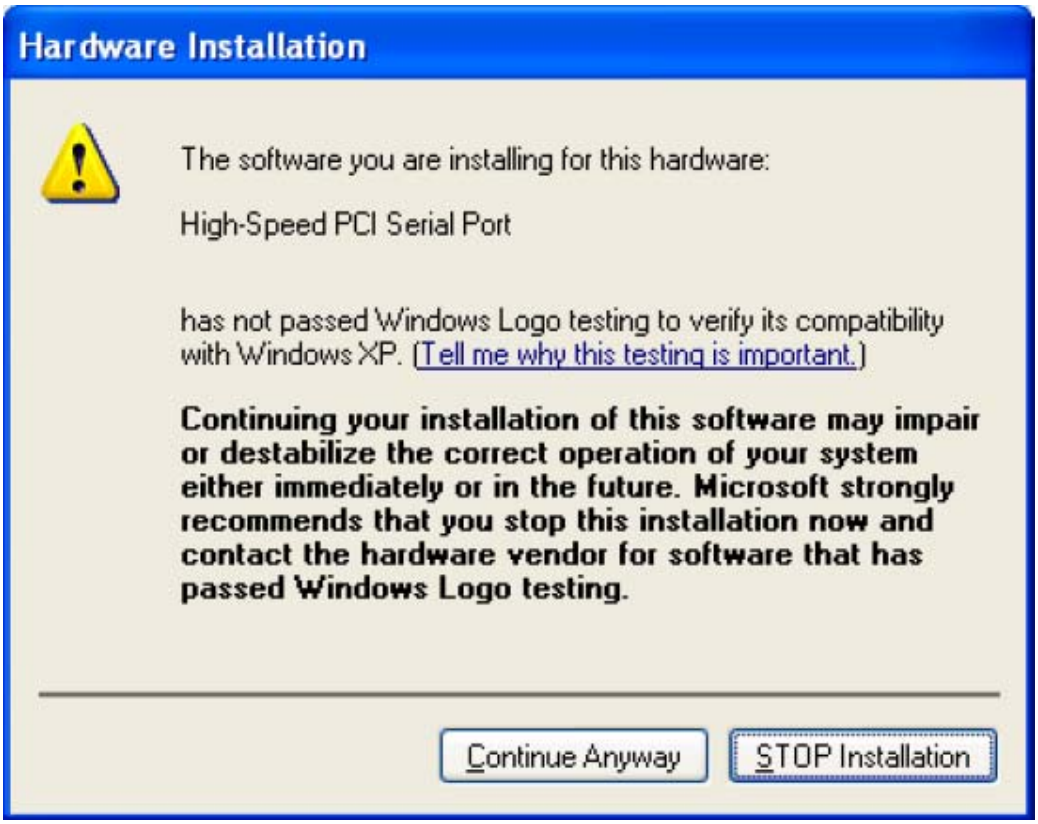
1. After powering on your PC, Windows will detect the board automatically.
2. Insert the Driver CD in your CD-ROM drive.
3. Select **Install from a list or specific location (Advanced)**. Select **Yes, this time only**, then click **Next**.



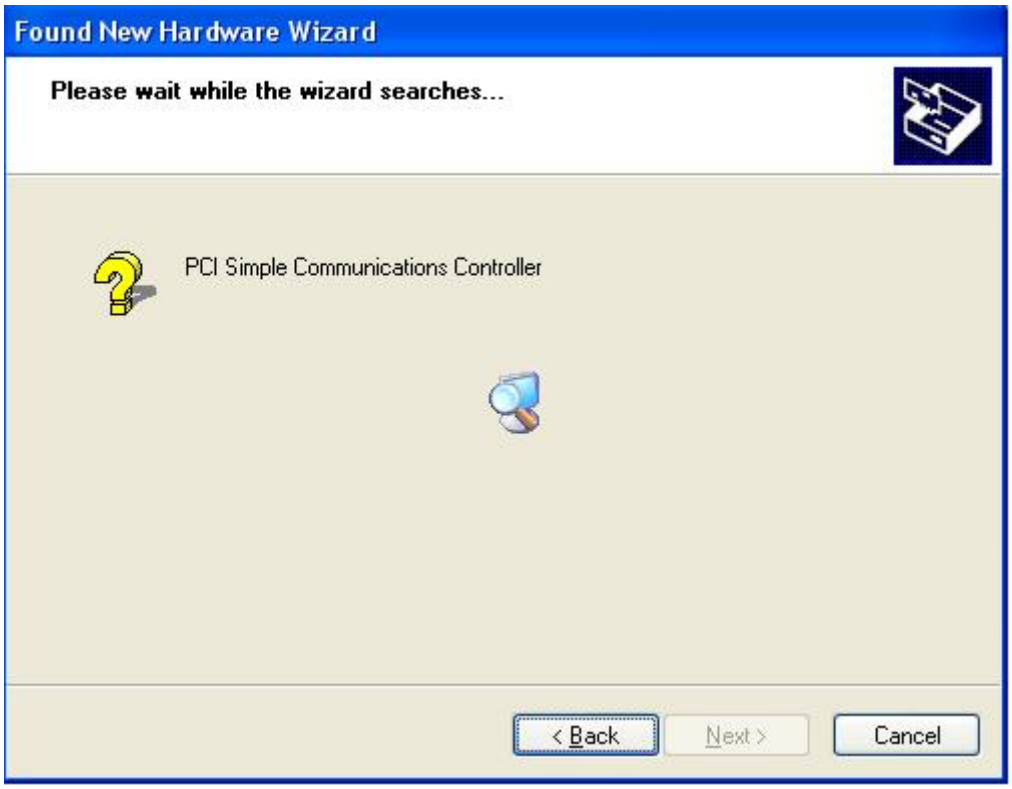
4. After selecting **Search for the best driver in these locations**, check the **Include this location in the search** checkbox, and then use the browse button to navigate the CD to find the folder matching the SIIG part number of your serial card, and click **Next**.

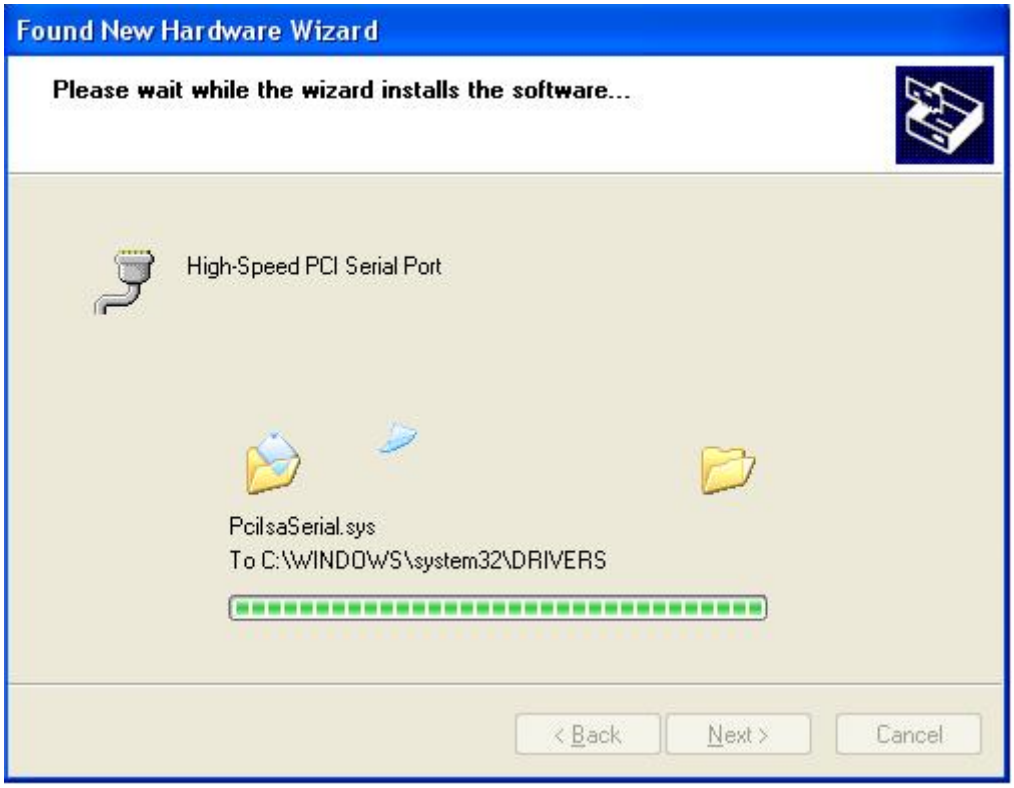


5. Click **Continue Anyway** in response to any warnings that the software hasn't passed Windows Logo testing.



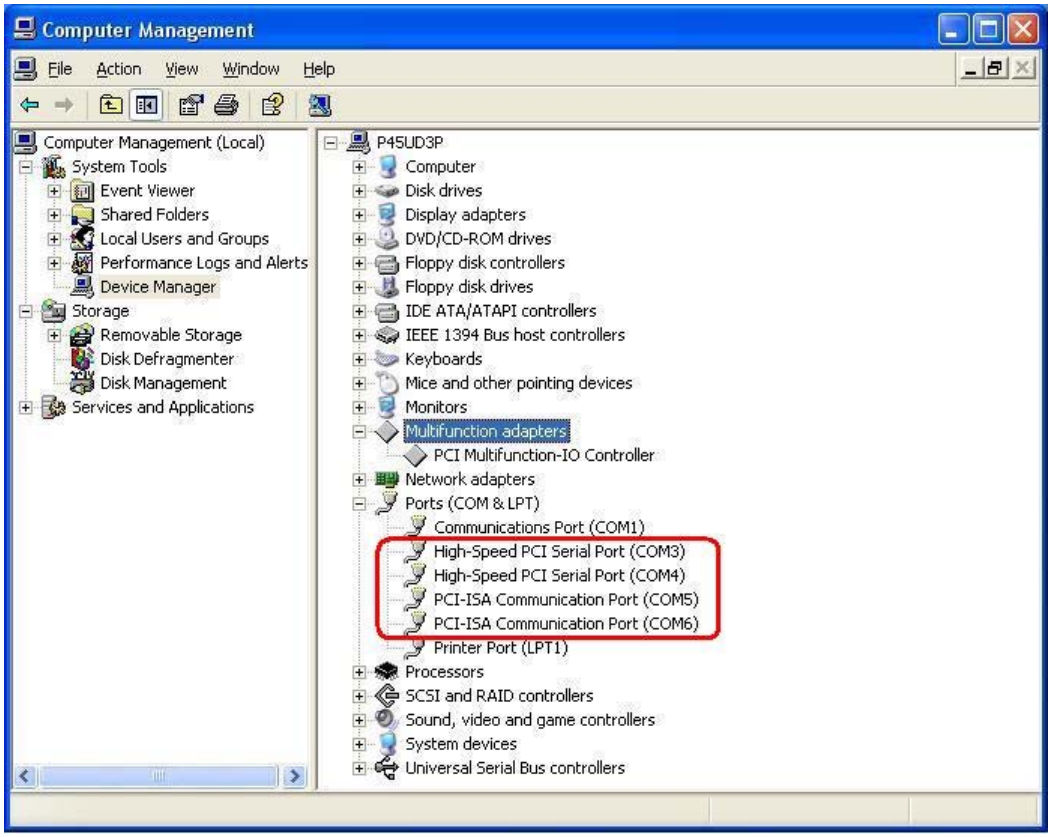
6. After the driver has been installed, the installation wizard will guide you through the port installation procedure, start with port0.





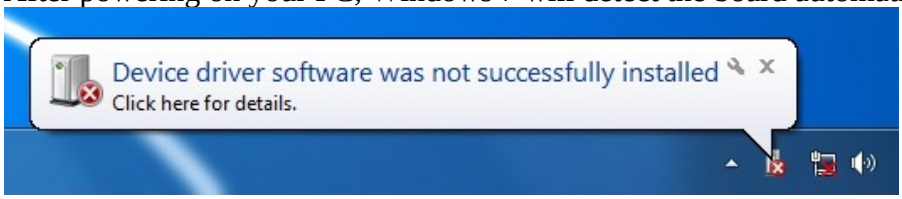
Found New Hardware Wizard
Please wait while the wizard installs the software...
High-Speed PCI Serial Port
PcilsaSerial.sys
To C:\WINDOWS\system32\DRIVERS
< Back
Next >
Cancel

7. Use the **Device Manager** to check if the installation of the board and ports was successful. Click on the + sign next to **Hardware**, and then check under **Multifunction adapters** and **Ports (COM & LPT)**. If there are any special marks, such as a question mark or exclamation point, in front of the board or port icons, please shutdown the system and make sure that the board is solidly installed into the PCI slot of the motherboard. At this time it is a good idea to remove the card and place it into a different PCI slot, if one is available. Otherwise, install it back into the same PCI slot.



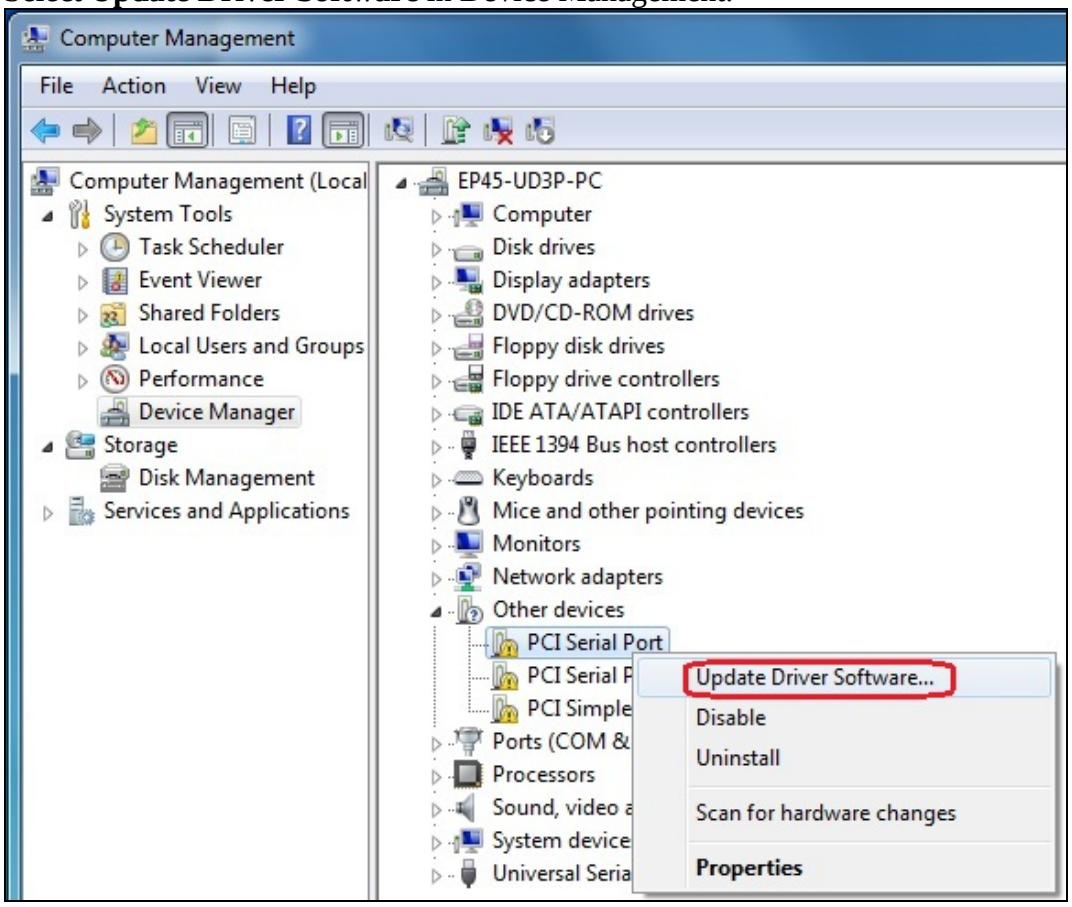
Windows 7 Driver Installation

1. After powering on your PC, Windows 7 will detect the board automatically.

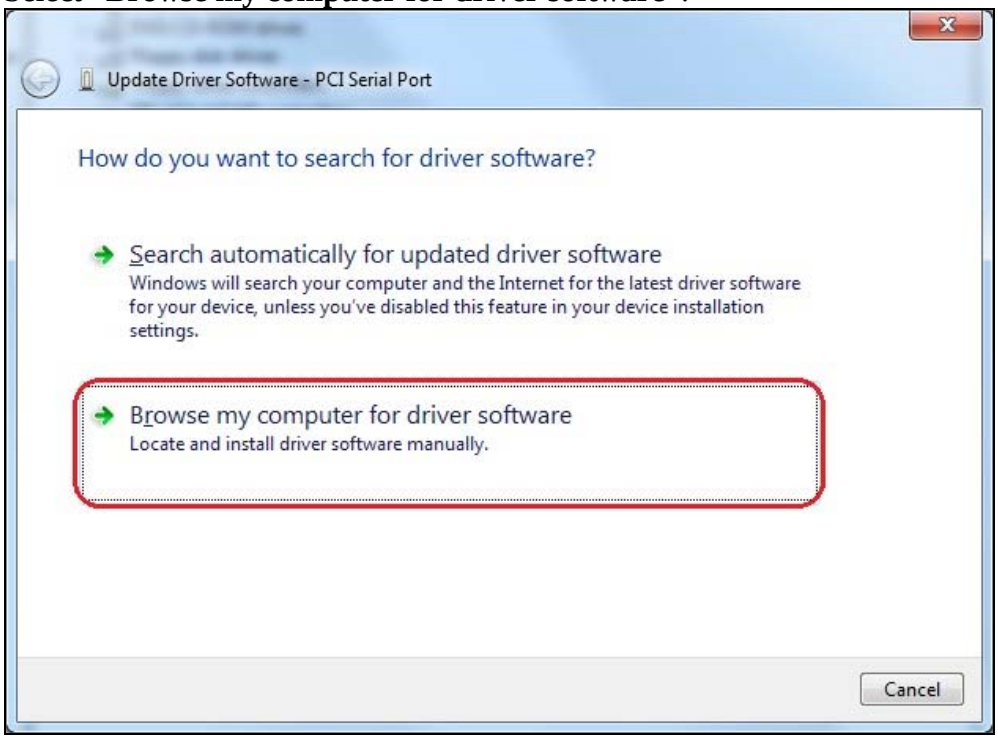


2. Insert the Driver CD into your CD-ROM drive.

3. Select **Update Driver Software** in Device Management.



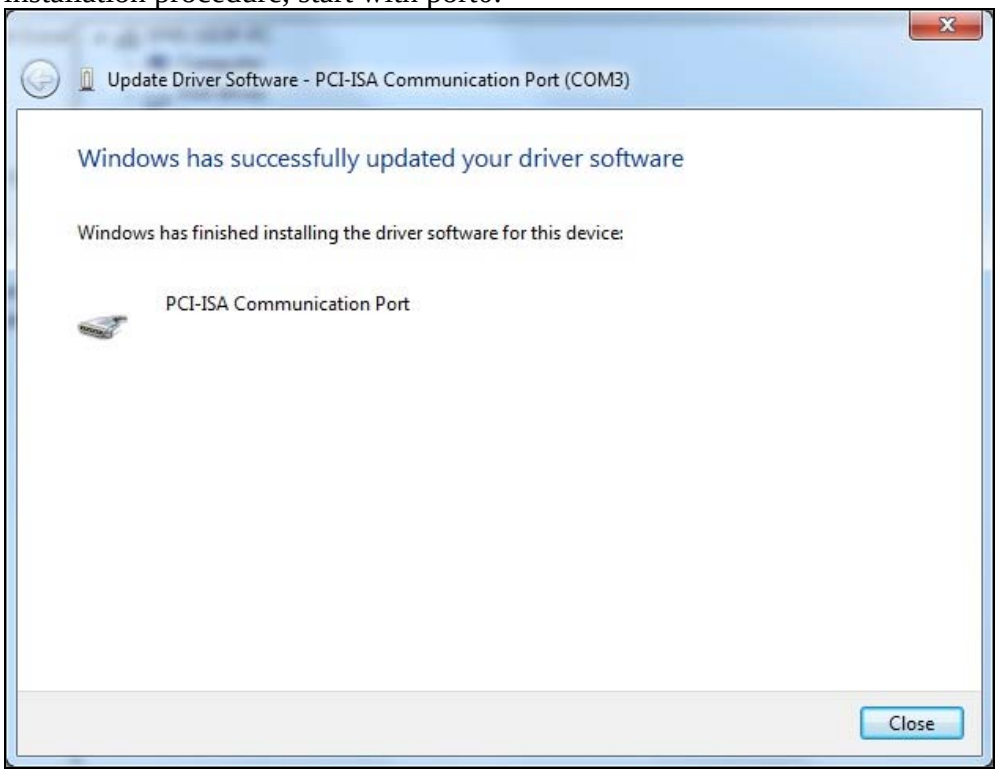
4. Select **"Browse my computer for driver software"**.



5. After selecting **Browse for driver software on your computer**, use the browse button to navigate the CD to find the folder matching the SIIG part number of your serial card. Then click **Next**.

6. Click **Install this driver software anyway** in response to any warnings that the software hasn't passed Windows Logo testing.

7. After the driver has been installed, the installation wizard will guide you through the port installation procedure, start with port0.



8. Use the **Device Manager** to check if the installation of the board and ports was successful. Click on the + sign next to **Hardware**, and then check under **Multifunction adapters** and **Ports (COM & LPT)**. If there are any special marks, such as a question mark or exclamation point, in front of the board or port icons, please shutdown the system and make sure that the board is solidly installed into the PCI slot of the motherboard. At this time it is a good idea to remove the card and place it into a different PCI slot, if one is available. Otherwise, install it back into the same PCI slot.

Technical Support and Warranty

QUESTIONS? SIIG's **Online Support** has answers! Simply visit our web site at ***www.siig.com*** and click **Support**. Our online support database is updated daily with new drivers and solutions. Answers to your questions could be just a few clicks away. You can also submit questions online and a technical support analyst will promptly respond.

SIIG offers a lifetime manufacturer warranty with this product. This warranty covers the original purchaser and guarantees the product to be free of any defects in materials or workmanship for the life of the product.

SIIG will, at our discretion, repair or replace (with an identical product or product having similar features and functionality) the product if defective in materials or workmanship. This warranty gives you specific legal rights, and you may also have other rights which vary from state to state. Please see our web site for more warranty details.

If you encounter any problems with this product, please follow the procedures below.

A) If it is within the store's return policy period, please return the product to the store where you purchased it.

B) If your purchase has passed the store's return policy period, please follow these steps to have the product repaired or replaced.

Step 1: Submit your RMA request. Go to **www.siig.com**, click **Support**, then **RMA** to submit a request to SIIG RMA or fax a request to 510-657-5962. Your RMA request will be processed, if the product is determined to be defective, an RMA number will be issued.

Step 2: After obtaining an RMA number, ship the product.

- Properly pack the product for shipping. All software, cable(s) and any other accessories that came with the original package must be included.

- Clearly write your RMA number on the top of the returned package. SIIG will refuse to accept any shipping package, and will not be responsible for a product returned without an RMA number posted on the outside of the shipping carton.

- You are responsible for the cost of shipping to SIIG. Ship the product to the following address:

  SIIG, Inc.
  6078 Stewart Avenue
  Fremont, CA 94538-3152, USA
  RMA #: _____

- SIIG will ship the repaired or replaced product via Ground in the U.S. and International Economy outside of the U.S. at no cost to the customer.

About SIIG, Inc.

Founded in 1985, SIIG, Inc. is a leading manufacturer of IT connectivity solutions (including Serial ATA and Ultra ATA Controllers, FireWire, USB, and legacy I/O adapters) that bridge the connection between Desktop/Notebook systems and external peripherals. SIIG continues to grow by adding A/V and Digital Signage connectivity solutions to our extensive portfolio. All centered around the distribution and switching of A/V signals over CAT5/6, these products include matrix switches, distribution amplifiers, extenders, converters, splitters, cabling, and more.

SIIG is the premier one-stop source of upgrades and is committed to providing high quality products while keeping economical and competitive prices. High-quality control standards are evident by one of the lowest defective return rates in the industry. Our products offer comprehensive user manuals, user-friendly features, and most products are backed by a lifetime warranty.

SIIG products can be found in many computer retail stores, mail order catalogs, and e-commerce sites in the Americas, as well as through major distributors, system integrators, and VARs.

PRODUCT NAME
Universal PCI Serial Cards

FCC RULES: TESTED TO COMPLY WITH FCC PART 15, CLASS B OPERATING ENVIRONMENT: FOR HOME OR OFFICE USE

FCC COMPLIANCE STATEMENT:

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.
