The MADI 16 Plus card (9000-7896-000) expands the ADAM system configuration capabilities by utilizing **MADI** (Multi-channel Audio Digital Interface) technology to connect any AES-10 compliant device over coaxial or fiber connections at sampling rates of 44.1kHz and 48kHz. The MADI is a point-to-point configuration which provides for little or no delay in the transmission of audio across lines.

The MADI 16 Plus is fully scalable, allowing 16 to 64 channels of audio in and out. It supports all standard, hot-swappable and configurable features through RTS' AZedit configuration software.

The MADI 16 Plus card allows audio connections between intercom frames and has an RS-232/-485 serial connection for serial pass-thru port connections. It also offers a fiber connection that provides a single mode option with a range up to 9.32 miles (15km) between ADAM frames.

Features

Installation -	The MADI 16 Plus is hot-swappable and installs in any available slot in an ADAM Intercom System. It has an RJ-45 connection for an RS-232 or RS-485 pass-thru serial port.
Scalability -	Provides 16 to 64 individually addressable audio channels. Each initial MADI card has 16 channels, with additional channels available for purchase in increments of 16.
Word Clock and TV Interface -	An external reference for the MADI 16 Plus, the word clock interface allows seamless synchronization of many different audio sources.
Fiber Optic Mode -	The MADI 16 Plus provides a single mode of operation providing up to 9.32 miles or 15km between ADAM systems.
Trunk Capable -	The MADI 16 Plus supports supplemental data control for use with the RTS' Intelligent Trunking.
AZedit Configuration -	Users are able to configure the audio parameters of each MADI channel in AZedit.
Pass-Thru Serial Port -	Provides a virtual serial connection over a MADI connection using an RJ-45 connection.

NOTE:

The fiber optic transceivers provide Class 1 eye safety by design and do not emit accessible laser radiation levels in excess of the acceptable emission limit (AEL) within the inherent design or intended use of the laser. Exempt, do not pose a hazard under normal operating conditions. These low powered lasers are incapable of producing injury when used as designed and intended and are exempt from engineering and administrative controls. A Class 1 laser could potentially have an embedded higher class inside of it. During service procedures with service panels removed and interlocks bypassed, it might be necessary to comply with higher class laser control measures during the service / repair procedure. Class 1 includes lasers that were formerly classified as Class 2a.

a. Use RG59/U 75 Ohm cable type for best results

Requirements

You must have the following:

- AZedit v3.9.0 or later
- Master Controller v2.2.0 or later
- MADI 16 Plus v2.0.0 or later
- If using a multi frame system, with DBX:
 - DBX v1.23.0 or later
 - PeriphII-e v 1.23.0 or later

How to Install

Use the following instructions for your initial setup of a MADI 16 Plus Card.

CAUTION: If you do not follow these instructions, the MADI card may not work properly.

Card Installation

To **install the MADI 16 Plus front and back card**, do the following:

1. Gently insert the **MADI 16 Plus front card** into the front of the ADAM frame.
2. Tighten the **MADI 16 Plus** front card.

CAUTION: Do not fully tighten the front card into the frame.

3. From the back of the ADAM frame, insert the **back card**, aligning it with the front card.
4. Ensure the **back card** is properly seated against the MADI 16 Plus front card and is sitting firmly in the frame.
5. Tighten the **back card** to the frame.
6. Fully tighten the **MADI 16 Plus front card**.

IMPORTANT: If you remove the MADI 16 Plus back card after installing it, and then replace it. You must reboot the MADI 16 Plus front card.

Cable the System

Using the information in “System Configuration Schemes” on page 10, determine what type of configuration you are going to use for your system.

Configure your MADI 16 Plus Card

To **configure your MADI 16 Plus Card**, do the following:

- Step 1** Select your **Channel Allocation Scheme**, see “Channel Allocation Scheme” on page 25.
- Step 2** Set the **Reference Clock for the MADI 16 Plus**, see “Reference Clock” on page 28.
- Step 3** Set the **Sampling Rate for the MADI 16 Plus**, see “Sample Rate” on page 29.
- Step 4** Set the **Channel Size for the MADI 16 Plus**, see “Channel Size” on page 30.
- Step 5** Map the **channels** of your MADI 16 Plus, see “Channel Mapping” on page 31.

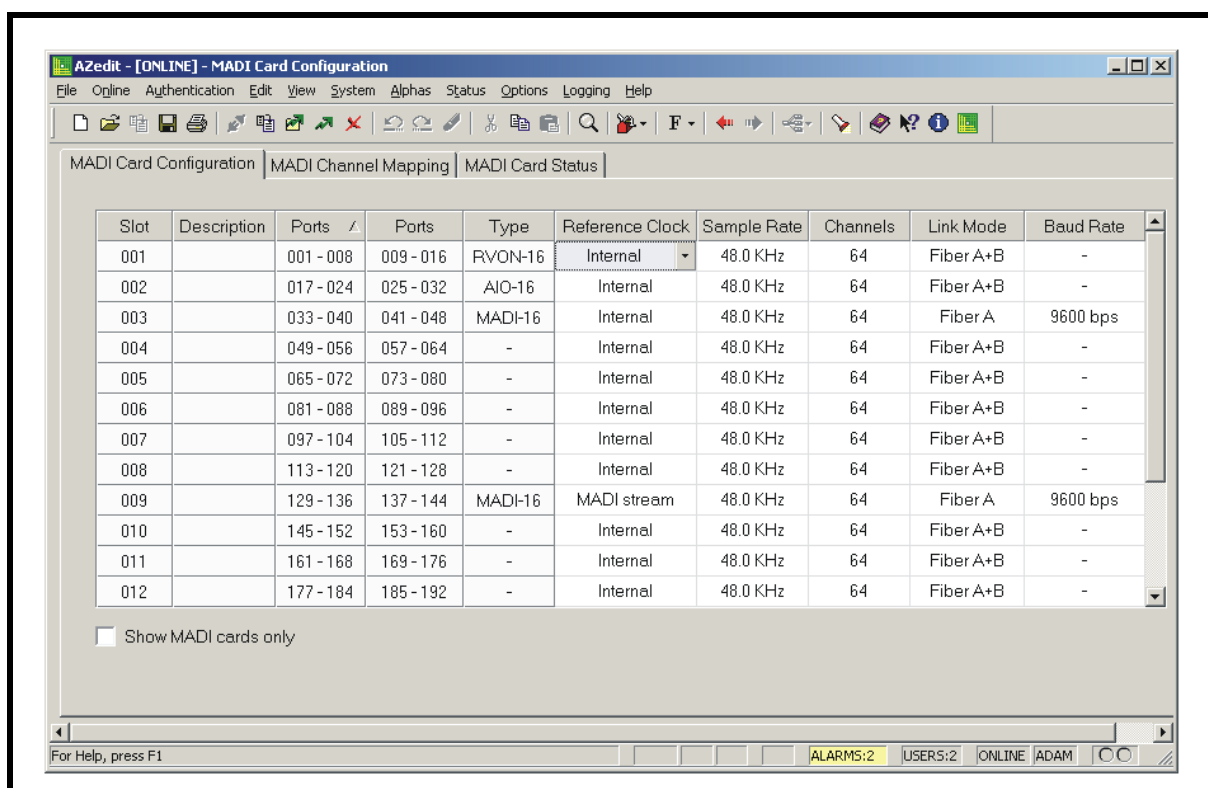

MADI Card Configuration Window

FIGURE 11. MADI Card Configuration Page

Slot Display Column

The **Slot** display column shows the location of the card in relation to the frame the card resides and its position in the frame. For example, 2:017 indicates the card is in frame two (2) and slot 17 of the card in the frame. The MADI 16 Plus can be put in any slot in the frame.

Description Display Column

The **Description** display column shows the unique description of the card. This description can be created or modified in the I/O Status Description window.

To **create or modify the description**, do the following:

1. From the Alpha menu in AZedit, select **I/O Card**.
The I/O Card Description window appears.
2. Double-click the **slot entry** where the card resides.
The Edit Alpha/Description window appears.

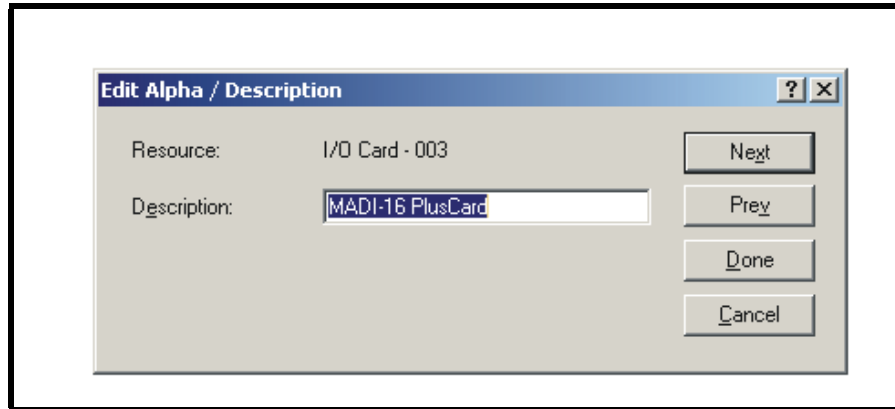

FIGURE 12. Edit Alpha/Description Window

3. In the Description field, enter a **description** for the card.
4. Press **Done**.
The Edit Alpha/Description window closes.

Ports Display Column (1)

The **Ports** display column shows the ports assigned to the card.

Ports Display Column (2)

The **Ports** display column shows the ports assigned to the card.

Type Display Column

The **Type** display column shows the type of card in the slot (for example, MADI-16, AIO-16, etc.).

Reference Clock Drop Down Column

The **Reference Clock** drop down column is used to select the type of clock the MADI card uses to synchronize its transmissions.

Available selections for this field are:

<i>Internal -</i>	The MADI card generates its own clock which is used to synchronize transmissions
<i>MADI Stream -</i>	The clock is retrieved from the MADI stream.
<i>NTSC/PAL -</i>	The clock is sent from the NTSC (National Television System Committee)/ PAL (Phase Altering Line) connection.
<i>Word -</i>	The clock from a Word Clock driver is used to synchronize the MADI transmissions.

Sample Rate Drop Down Column

The **Sample Rate** drop down column is used to select the speed the MADI card references for transmission.

IMPORTANT:

- When Word Clock is selected as the type of clock, the sample rate must match the Word Clock driver.
- When Internal or NTSC/PAL is selected as the type of clock, the sample rate must match the device at the other end of the connection.

Available selections for this field are: *44.1KHz* and *48.0KHz*

of Channels Drop Down Column

The **# of Channels** drop down column is used to select the number of channels on the MADI card. The MADI card can have up to 64 channels assigned to each card.

Available selections for this field are: *56* and *64*

Link Mode Drop Down Column

The **Link Mode** drop down column is used to select the connector you want use. For connector locations, see Figure 1 on page 5.

NOTE: Redundancy is only supported between singular point-to-point connections.

Available selections for this field are:

<i>Fiber A -</i>	The signal is sent over the Fiber A connection.
<i>Fiber B -</i>	The signal is sent over the Fiber B connection.
<i>Fiber A and B -</i>	The signal is sent over the Fiber A connection, however, if Fiber A fails or is damaged, the Fiber B connection takes over sending the MADI stream.
<i>Coax -</i>	The signal is sent over the coaxial connection.

Baud Rate Drop Down Column

The **Baud Rate** drop down column is used to select the baud rate for the serial port.

Available selections for this field are:

None
9600bps
19.2Kbps
38.4Kbps

Show MADI Cards Only Check Box

The **Show MADI Cards Only** check box indicates only MADI cards are displayed in the window.

MADI Channel Mapping Window

The **MADI Channel Mapping** window, shown in Figure 13, is used to map the available MADI channels to available intercom ports in the system.

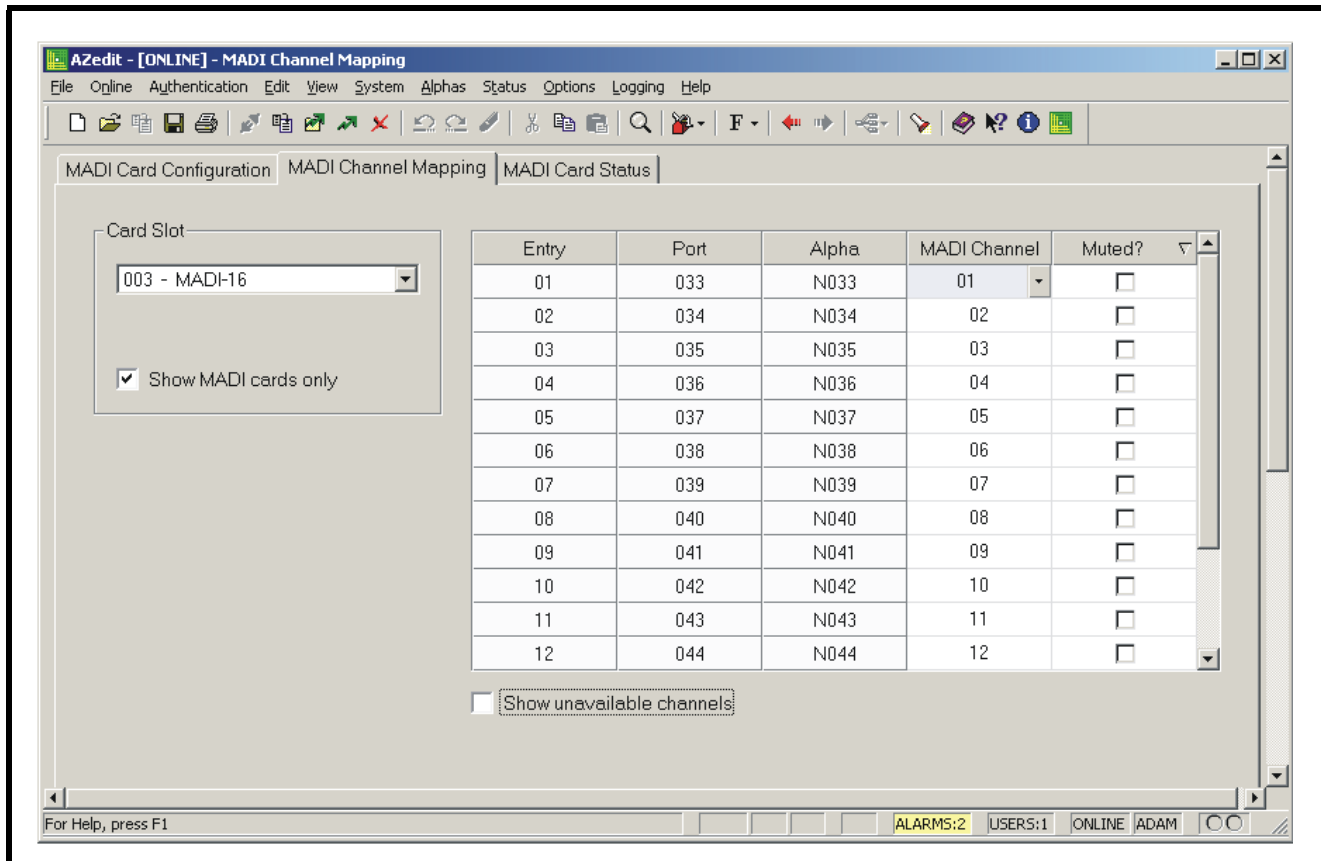

FIGURE 13. MADI Channel Mapping Window

Card Slot Group Box

Card Slot Drop Down List

The **Card Slot** drop down list is used to select the card you want to configure.

Show MADI Cards Only Check Box

The **Show MADI Cards Only** check box indicates to only show MADI cards in the Card Slot drop down list.

The default is to display all cards in the system.

Entry Display Column

The **Entry** display column displays the number of audio channels you have available to use for the selected MADI card.

Port Display Column

The **Port** display column shows the port number associated with the entry.

Alpha Display Column

The **Alpha** display column shows the alpha of the selected port. Alphas can be 4-, 6-, or 8-character names depending on the configuration of AZedit.

REFERENCE: For more information on configuring AZedit, see the AZedit User Manual (P/N 93507769000).

MADI Channel Drop Down Column

The **MADI Channel** drop down column is used to select the MADI channel associated with the intercom port. You can have up to 64 channels to choose from.

Available selections for this field are:

– (*hyphen*) No channels are assigned

Channels 1-64

Muted? Check Box Column

The **Muted?** check box column is used to mute the transmit and receive channel audio.

By default, *Muted?* is not selected.

Show Unavailable Channels Check Box

The **Show Unavailable Channels** check box is used to display all channels in the system whether they are available for assignment or not.

The default is to show only available channels.

MADI Card Status Window

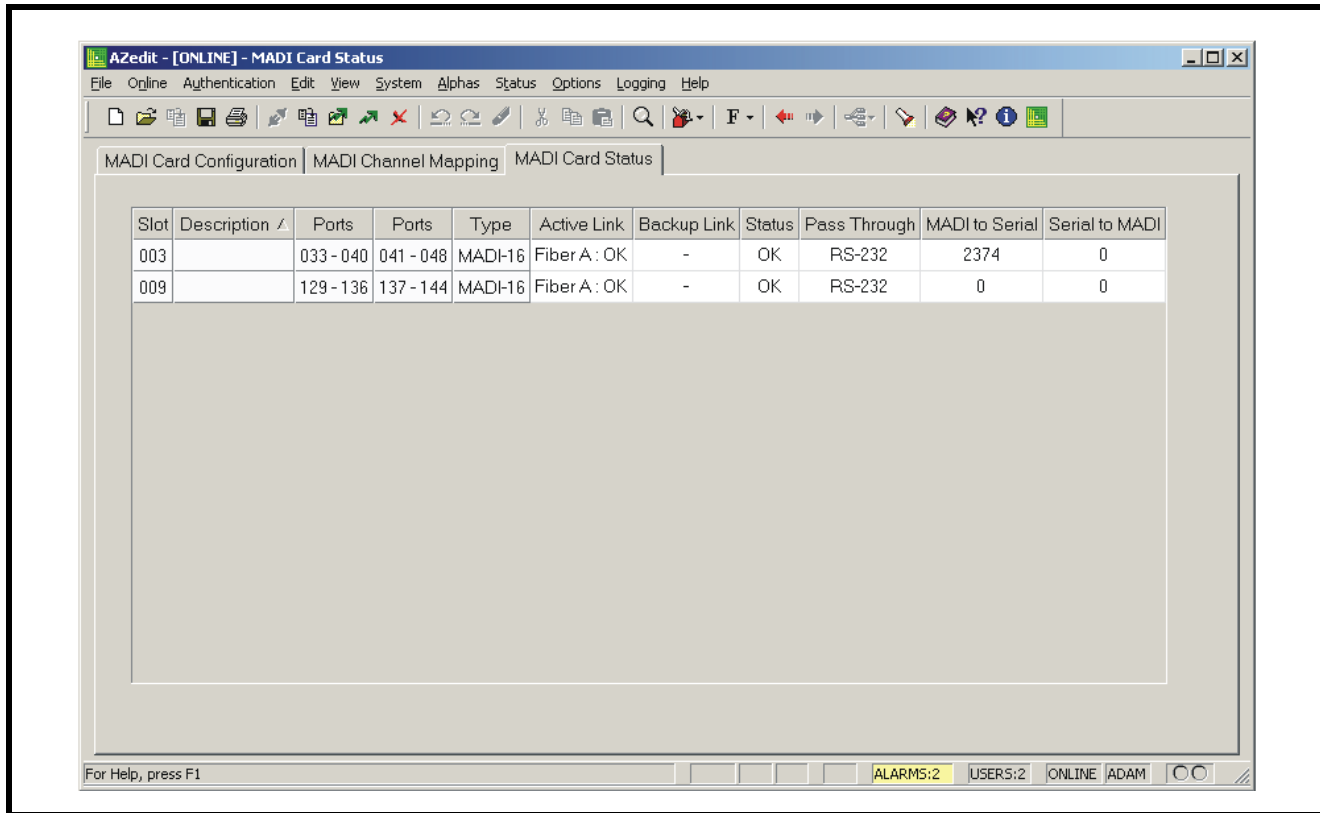

FIGURE 14. MADI Card Status Window

Slot Display Column

The **Slot** display column shows the slot location of the card in the intercom system.

Description Display Column

The **Description** display column shows the description assigned to the slot.

Ports Display Column (1)

The **Ports** display column shows the first eight (8) channels assigned to the slot.

REFERENCE: For more information on channel numbering schemes, see “Channel Allocation Scheme” on page 25.

Ports Display Column (2)

The **Ports** display column shows the second eight (8) channels assigned to the slot.

REFERENCE: For more information on channel numbering schemes, see “Channel Allocation Scheme” on page 25.

Type Display Column

The **Type** display column shows the type of card in the slot (i.e., MADI-16, AIO-16, etc.).

Active Link Display Column

The **Active Link** display column shows the status of the active link (Fiber A, Fiber B, or Coax).

There are two (2) status message possibilities: *OK* and *Bad*

Backup Link Display Column

The **Backup Link** display column shows the status of the backup link, if configured. This column is blank if the card is not configured for redundant fiber, link mode set to Fiber A+B. See “Link Mode Drop Down Column” on page 19.

NOTE: The backup link can never be Coax.

There are two (2) status message possibilities: *OK* and *Bad*

Status Display Column

The **Status** display column shows status of the MADI card in the slot.

There are four (4) status message possibilities:

OK

Wrong Back Card - The wrong back card is installed.

FPGA Boot Failure -

PLL Unlocked -

Pass-Through Display Column

The **Pass-Through** display column shows type pass-through connection being used.

Available selections for this field are: *RS-232* and *RS-485*

MADI to Serial Display Column

The **MADI to Serial** display column shows the number of bytes received on the MADI link and transmitted out on the serial connection.

Serial to MADI Display Column

The **Serial to MADI** display column shows the number of bytes received on the Serial connection and transmitted out on the MADI link.

The MADI-16 Plus is almost entirely configured using RTS' AZedit configuration software. You can set the channel allocation scheme, set the speed, set the synchronization source, select the channel size, map channels, configure a redundant fiber connection, set the volume, and upgrade MADI firmware.

IMPORTANT: A maximum of four (4) MADI 16 Plus cards can be used in a single frame.

Channel Allocation Scheme

Each ADAM frame slot, 17 in total, is capable of supporting 16 channels of audio. Depending on your frame construction, there are two (2) configuration options that are supported by the MADI-16 Plus—Base 8 (standard density) and Base 16 (high density).

By default, the channel allocation scheme is set to *Base 8*.

Base 8

The **Base 8** channel numbering system splits 16 channels between a top and bottom group. The bottom group starts with channels 1–136, the top group consists of channels 137–272 (see Figure 15).

EXAMPLE: If you have an AIO-16 in slot one, channels 1–8 and 137–144 are used by the AIO-16 card. Alternatively, if you have AIO-16s in slots 1 and 3, and an AIO-8 in slot 2, the following channel mapping applies:

AIO-16 channels 1–8 and 137–144
AIO-8 channels 9–16, Channels 145–161 are not used when an AIO-8 is in the slot.
AIO-16 channels 17–33 and 162–178

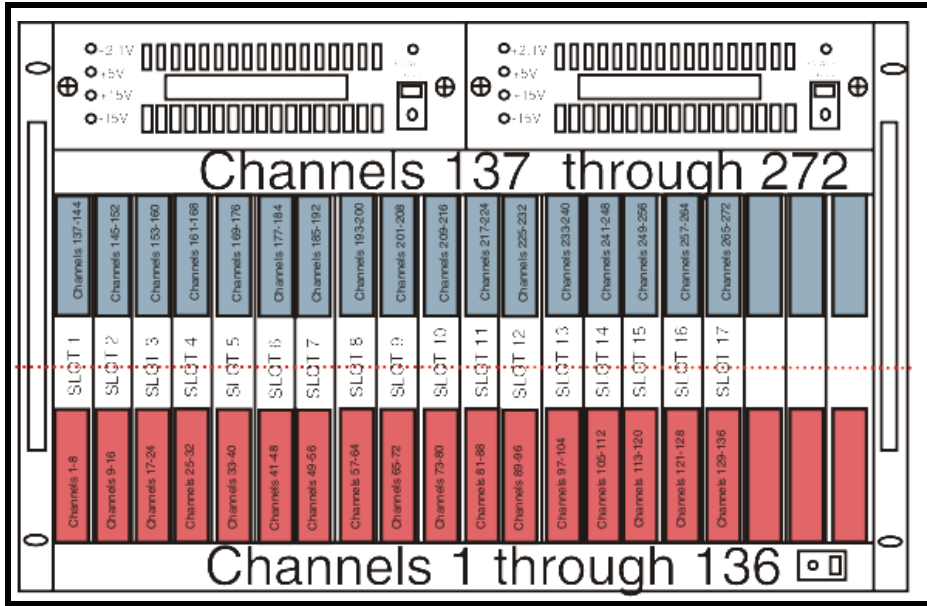

FIGURE 15. Base 8 Channel Number Scheme Example

Base 16

Unlike the Base 8 channel numbering scheme, where the channels are split into an upper and lower set of eight (8), the Base 16 channel numbering scheme puts all 16 channels in one (1) slot. This means, when you configure your intercom system to support Base 16, slot 1 in the ADAM holds channels 1–16, slot 2 holds channels 17–32, slot 3 holds 33 through 48, and so on.

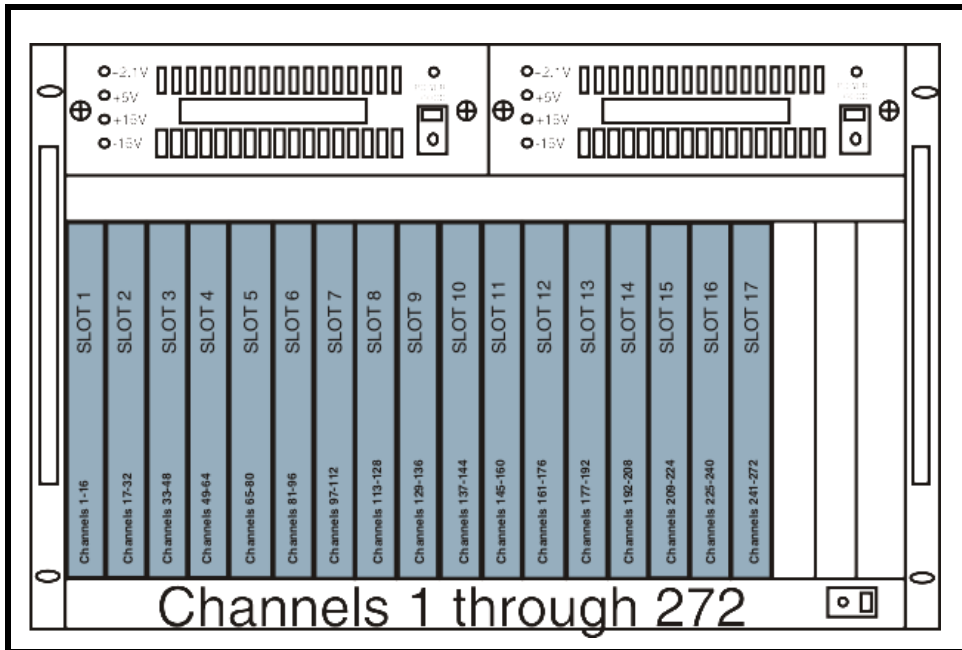

FIGURE 16. Base 16 Port Numbering Scheme Example

To set the port configuration scheme, do the following:

1. From the Options menu in AZedit, select **Frame Mapping Table...**
The Frame Mapping Table window appears.

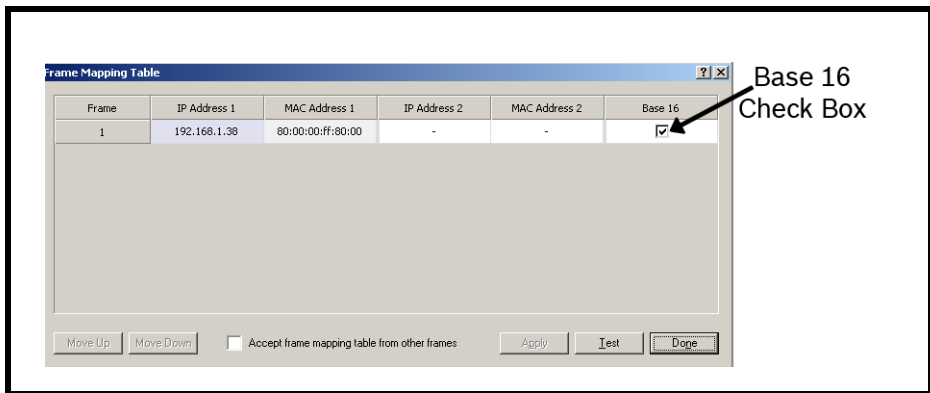

FIGURE 17. Base Sixteen Check Box

2. Clear the **Base 16 check box** for the frame you want Base 8 channel configuration.
OR
Select the **Base 16 check box** for the frame you want Base 16 channel configuration.

Reference Clock

The Reference Clock for the MADI stream can come from one (1) of four (4) different sources:

- Internal* - The MADI stream is set by the internal clock on the MADI card.
- MADI Stream* - The MADI stream is set by the incoming MADI stream.
- NTSC/PAL* - The MADI stream is set by the NTSC/PAL (TV Sync) source.
- Word Clock* - The MADI stream is set by the Word Clock.

To set the reference clock, do the following:

1. From the System menu in AZedit, select **Miscellaneous|MADI Configuration**.
The MADI Configuration window appears.
2. On the MADI configuration tab, find the **MADI card** you are configuring.

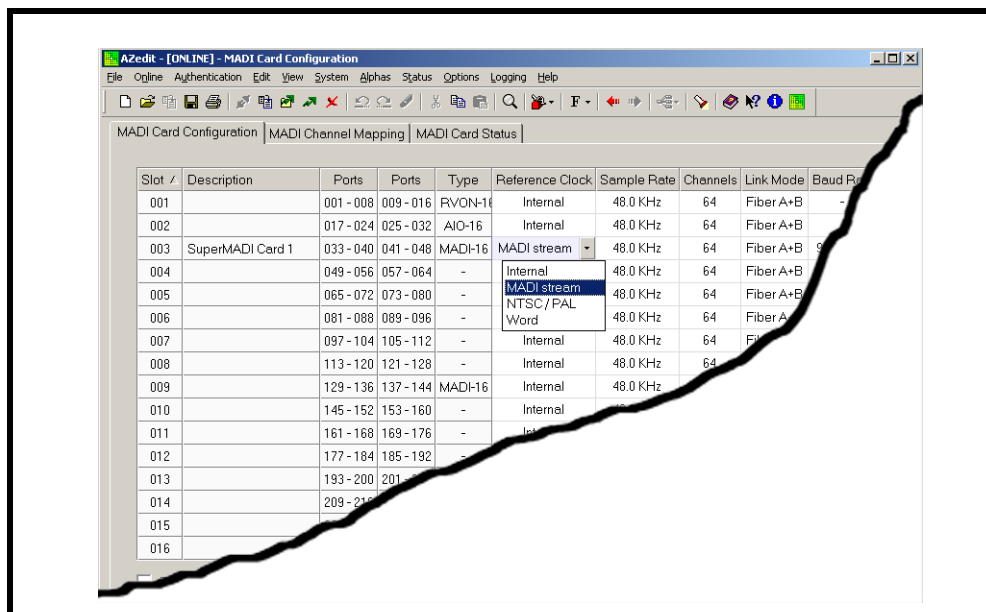

FIGURE 18. Reference Drop Down Menu

3. From the Reference Clock column drop down menu, select the **Reference Clock Source** you want to use.
4. Send the **changes** to the Matrix.

Sample Rate

The MADI-16 Plus has two (2) sampling speeds it can run—44.1kHz and 48.0kHz.

To **set the sample rate**, do the following:

1. From the System menu in AZedit, select **Miscellaneous|MADI Configuration**.
The MADI Configuration window appears.
2. On the MADI configuration tab, find the **MADI card** you are configuring.

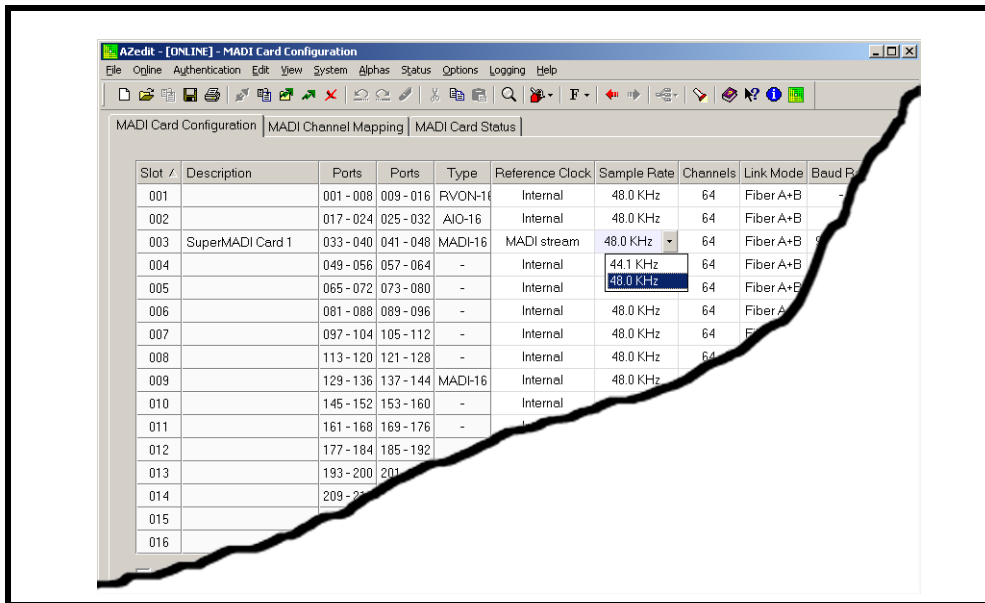

FIGURE 19. Sample Rate Drop Down Menu

3. From the Sample Rate column drop down menu, select the **sample rate** you want to use.
4. Send the **changes** to the Matrix.

Channel Size

MADI devices support either 56 or 64 channels. When connecting a MADI device to the ADAM frame, you must configure AZedit with the channel size of the MADI device. This is so you can map the MADI channels correctly.

To **set the channel size**, do the following:

1. From the System menu in AZedit, select **Miscellaneous|MADI Configuration**.
The MADI Configuration window appears.
2. On the MADI configuration tab, find the **MADI card** you are configuring.

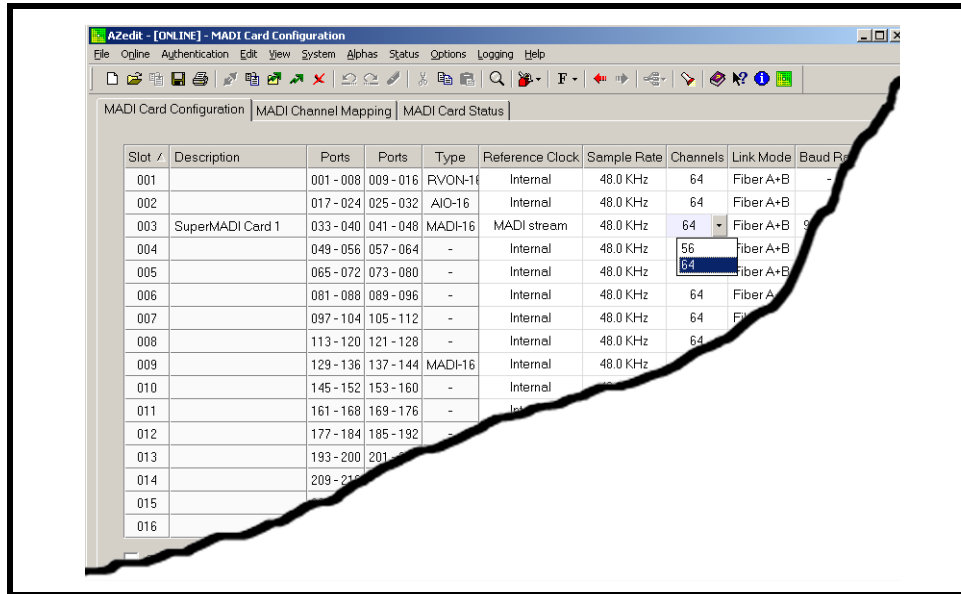

FIGURE 20. Channels Drop Down Menu

3. From the Channels column drop down menu, select the **channel size** of the MADI device you are using.
4. Send the **changes** to the Matrix.

Channel Mapping

Channel Mapping allows you to assign specific MADI channels to particular ports. For example, if your MADI device has 56 channels of audio and each ADAM slot supports 16 channels, you may need to assign channels on the same MADI device to different ports.

To **map an individual MADI 16 Plus Channel**, do the following:

1. From the System menu in AZedit, select **Miscellaneous | MADI Configuration**.
The MADI Configuration window appears.
2. Click the **MADI Channel Mapping** tab.
The MADI Channel Mapping page appears.

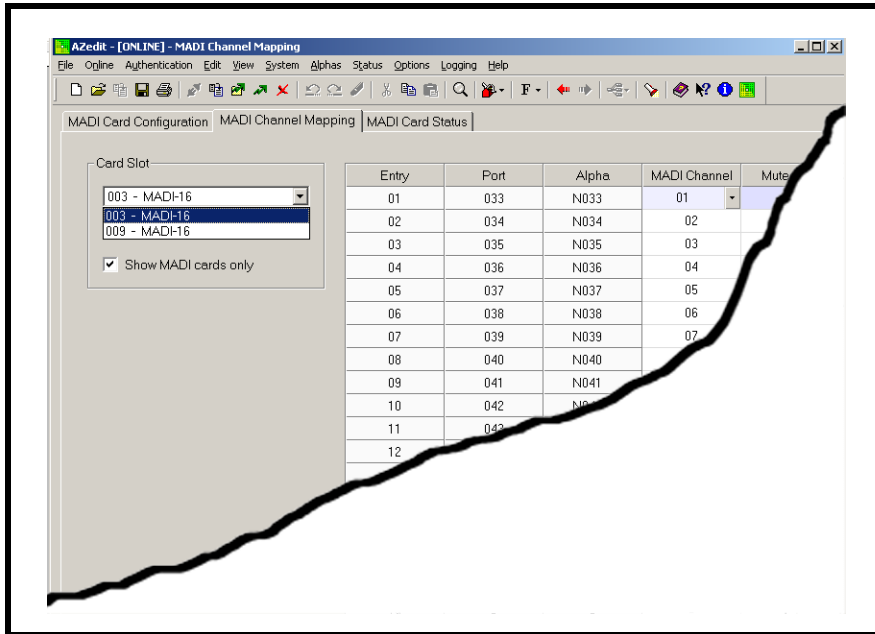

FIGURE 21. Channel Mapping Page

3. From the Card Slot drop down menu, select the **MADI 16 Plus card** you want to assign a MADI device channel.

NOTE: If you are using multiple types of cards (i.e., RVON-16, AIO-16, etc.) in your frame, select the Show MADI cards only check box to only show MADI cards. This makes it easier for you to select the card you want to assign channels to.

4. From the MADI Channel column, select the **MADI device channel** you want to assign to the MADI 16 Card.

- Click the **Channel** drop down menu.
A list of available MADI device channels appear.

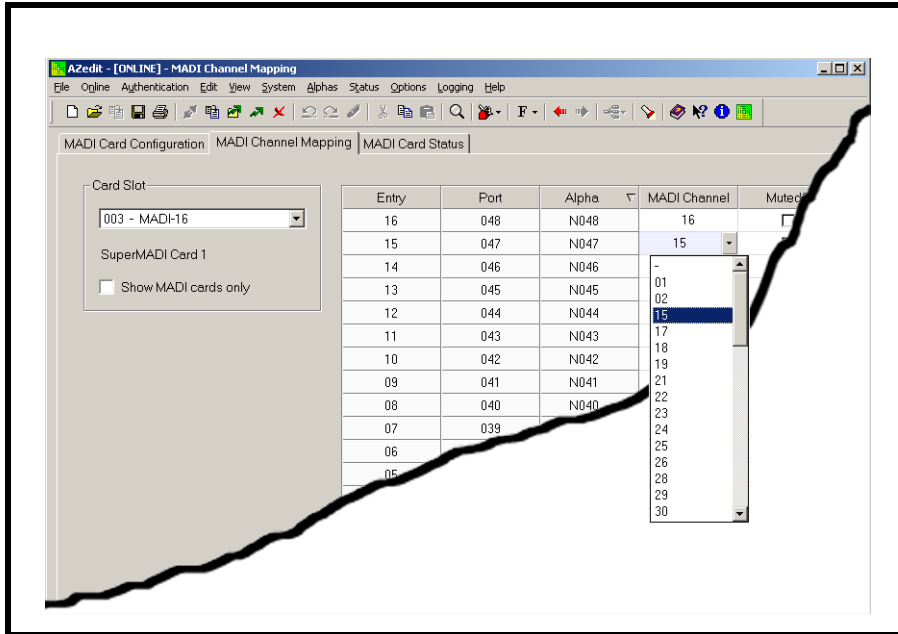

FIGURE 22. MADI Device Channel Menu

- Select the **MADI device channel** you want to assign.
- Click the **activate icon**  to send the assignment to the matrix.

To **map multiple MADI device channels at the same time**, do the following:

1. From the System menu in AZedit, select **Miscellaneous | MADI Configuration**.
The MADI Configuration window appears.
2. Click the **MADI Channel Mapping** tab.
The MADI Channel Mapping page appears.

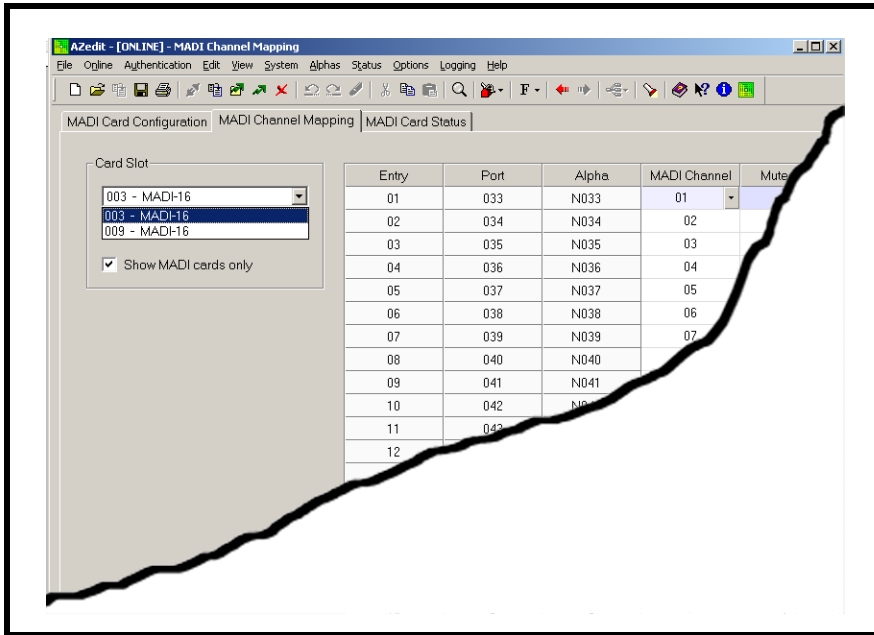

FIGURE 23. Channel Mapping Page

3. From the Card Slot drop down menu, select the **MADI 16 Plus card** you want to assign MADI device channels.

NOTE: If you are using multiple types of cards (i.e., RVON-16, AIO-16, etc.) in your frame, select the Show MADI cards only check box to only show MADI cards. This makes it easier for you to select the card you want to assign channels to.

4. From the MADI Channel column, select the **device channels** you want to assign to the MADI 16 Card.

NOTE: To select random channels, hold the **Ctrl** key down on the keyboard and click the **individual channels** you want to assign.

The channels you select are highlighted.

OR

To select a group of channels, hold the **Shift** key down on the keyboard, then click the **first channel and last channel** in the group.

All the channels between the first and last channel are highlighted.

- Click the **Channel** drop down menu.
A list of available channel ranges appear.

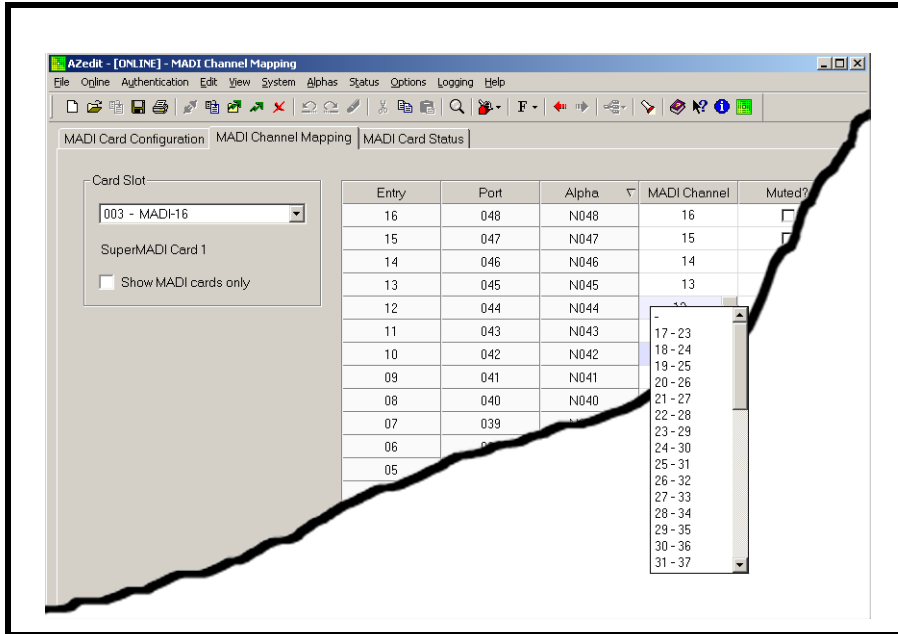

FIGURE 24. MADI Device Channel Ranges

- Select the **channel range** you want to assign.
- Click the **activate** icon  to send the assignment to the matrix.

Merge Channels

A **Merge** is where an certain amount of MADI channels from one (1) MADI device is combined with a certain amount of channels from another MADI device to build a total system of up to 64 channels. MADI channel mapping and merging associates ADAM channels to MADI channels.

ADAM Channels - the channels are located on the ADAM frame.

MADI Channels - the channels are located on the MADI stream.

A merge can work on a Fiber or Coaxial connection. Use Figure 6 or Figure 7 on page 11, to wire your cards appropriately.

FIGURE 25. MADI Merge Example

The example shown in Figure 25 shows two (2) MADI devices sending 8 channels each to one (1) MADI 16 Plus Card. The audio path for the channels is as follows:

EXAMPLE: Device 1 sends eight (8) channels (MADI channels 1–8) to the MADI card (2). The MADI card sends eight (8) more channels (MADI channels 9–16) to Device 3. Device 3 takes and replaces all 16 channels and sends those 16 channels to Device 1. When Device 1 receives the 16 MADI channels, it takes its eight (8) channels (1–8) and replaces them with new data and passes the 16 channels to the MADI card. When the MADI card receives the 16 channels from Device 1, it takes its channels (9–16) and replaces them and sends them on to Device 3 which takes and replaces all 16 channels and forwards it on. This continues as long as the data path is open.

IMPORTANT: It is critical to assign channels correctly in the MADI Channel Mapping window. For more information, see “MADI Channel Mapping Window” on page 20.

Download Firmware

To download new firmware to the MADI 16 Plus card, do the following:

1. From the Status menu in AZedit, select **Software Versions|I/O Cards**.
The I/O Card Versions window appears.

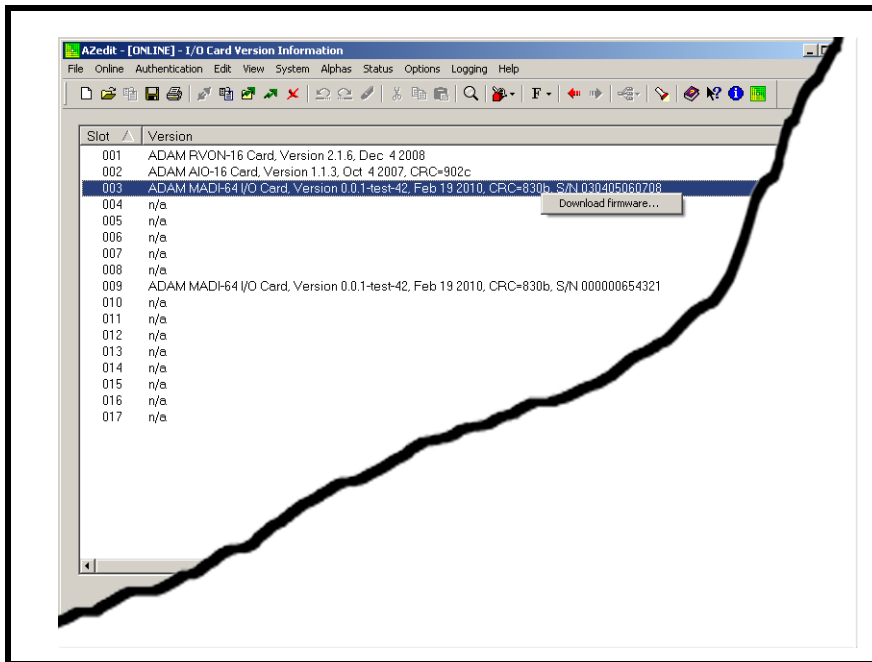

FIGURE 26. I/O Card Version Information Window

2. Right-click the **MADI card** you want download firmware to.
A Download Firmware menu option appears.

NOTE: To select multiple MADI 16 Plus cards, hold down the **Ctrl** key while you click the MADI cards.

3. Select **Download Firmware**.
The Download Firmware window appears.
4. Navigate to the **.hex file** you want to download.
5. Click **Open**.
The Download Device Firmware window appears.

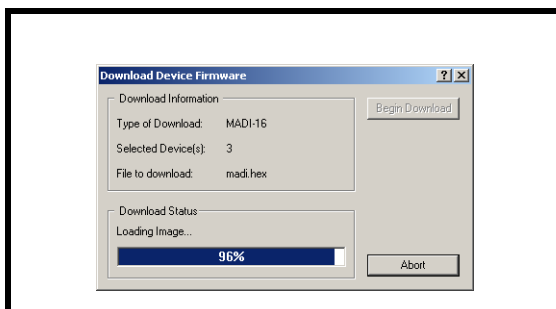

FIGURE 27. Download Device Firmware Window

6. Click **Begin Download**.
The download begins. This takes a minute or two to occur. A success message appears when the download is finished in AZedit.

7. Click **OK**.
The success message and the Download Device Firmware window close.

FIGURE 28. Success Message

8. From the Status menu, select **I/O Cards**.
The I/O Card Status window appears.
9. Verify the **MADI 16 Plus firmware** has been updated.

IMPORTANT: Do not power down the frame or remove the MADI 16 Plus card from the frame until you have verified the new version information from AZedit. If the card loses power during download, undesirable results may occur.

Download License File to MADI Card

To **download the license file**, do the following:

1. From the I/O Version window, right-click the **MADI card** you want to upgrade.
A popup menu appears.

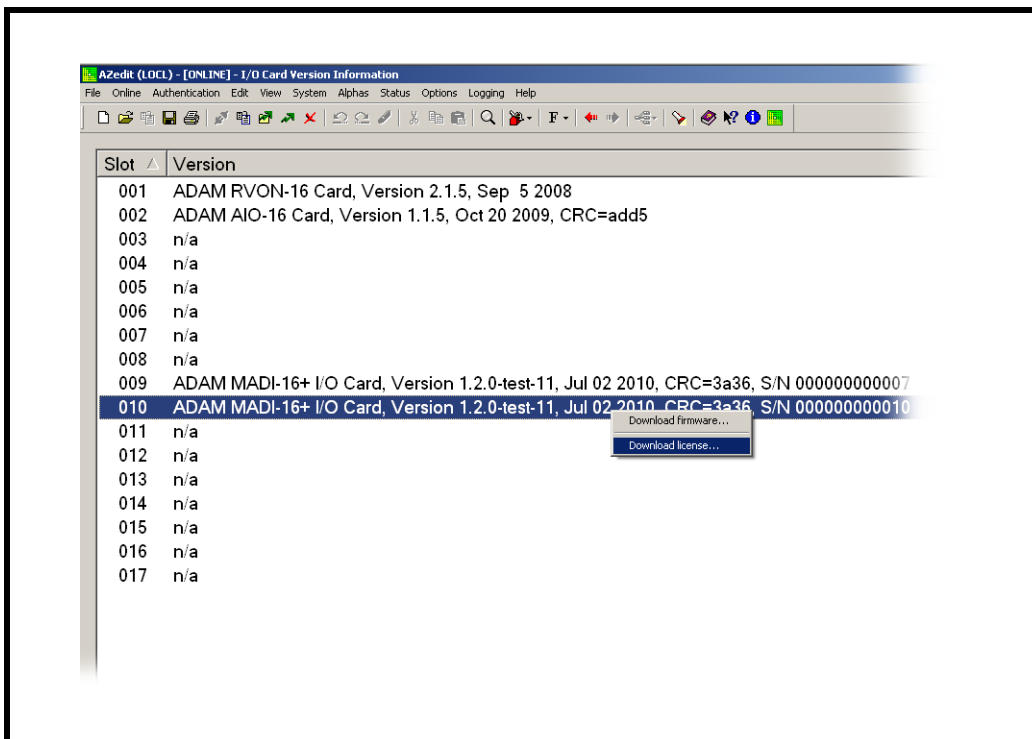

FIGURE 29. Download License Popup Menu

2. From the popup menu, select **Download license...**
The License Download window appears.

3. Navigate to the **license file**.
4. Click **Open**.
The Download License File window appears.

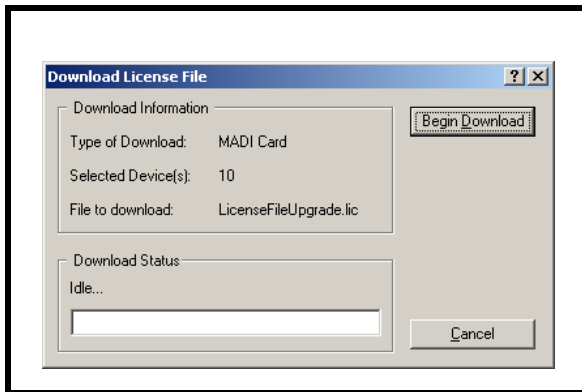

FIGURE 30. Download License File Window

5. Click **Begin**.
The license file is downloaded. A success message appears once the file is done downloading.
6. From the Status menu, select **I/O Card Status**.
The I/O Card Status window appears.
7. Verify the **download** was successful.

Port Allocation Table

Introduction

The **Port Allocation Table** is used to support I/O cards with more than 16 ports. It allows you to select which card types occupy which intercom slots and which ports are allocated to each card. Ports can be allocated in groups of four (4). Each group contains 16 ports. Each MADI card can have no more than 64 ports per card.

NOTE: If you are running a single frame system, the single frame can hold up to 880 ports; if you are running a multi-frame Tribus system, you are limited to 256 ports per frame.

IMPORTANT: Check power limitations of each frame before building large intercom systems.

Requirements:

The Port Allocation Table requires the following minimum firmware versions:

- AZedit V3.9.0
- MCII-e V2.3.0
- DBX V1.24.0, w/PCII-e V1.24.0

To **navigate to the port allocation table in AZedit**, do the following:

- > From the Options menu, select **Port Allocation Table**.
The Port Allocation Table window appears.

Port Allocation Table Window

Slot	Type	Allocated	Ports	Ports	Ports	Ports	Warning
001	RVON-16	16	001 - 016	-	-	-	
002	AIO-16	16	017 - 032	-	-	-

015	-	-	-	-	-	-	
016	-	-	-	-	-	-	
017	-	-	-	-	-	-	

Warning: Not all ports are allocated.

Buttons: Apply, Test, Cancel

FIGURE 31. Port Allocation Table Window

Slot Column

The **Slot** column displays the number of the slot where the card resides.

This field is not editable.

Type Column

The **Type** column is used to select the type of card in the slot. Use the drop down menu to select the type of card in the slot.

Available options are: *AIO-8*, *AIO-16*, *RVON-8*, *RVON-16*, *MADI-16*, *MADI-32*, *MADI-48*, *MADI-64*, and *AES-3*.

Slot	Type	Allocated	Ports	Ports	Ports	Ports	Warning
001	RVON-16	16	001 - 016	-	-	-	
002	AIO-16	16	017 - 032	-	-	-	
003	RVON-16	8 + 8	049 - 056	209 - 216	-	-	Card not detected
004	-	-	-	-	-	-	
005	-	-	-	-	-	-	
006	-	-	-	-	-	-	
007	-	-	-	-	-	-	
008	AIO-16	-	-	-	-	-	Card has unallocated ports
009	MADI-64	64	129 - 144	145 - 160	161 - 176	177 - 192	
010	MADI-64	64	801 - 816	817 - 832	833 - 848	849 - 864	
011	MADI-64	-	-	-	-	-	Card has unallocated ports
012	MADI-64	-	-	-	-	-	Card has unallocated ports
013	-	-	-	-	-	-	
014	-	-	-	-	-	-	
015	-	-	-	-	-	-	
016	-	-	-	-	-	-	
017	-	-	-	-	-	-	

Warning: Not all ports are allocated.

Buttons: Apply, Test, Cancel

FIGURE 32. Type Column Options

Allocated Column

The **Allocated** column is used to select the number of ports to allocate. Use the drop down menu to select the number of ports you want to allocate.

Available options are:

- 8 - Used to allocate 8 ports in a Base 8 system.
- 8+8 - Used to allocate 16 ports in a Base 8 system.
- 16 - Used to allocate 16 ports in a Base 16 system.
- 24 - Used to allocate 24 ports in a Base 16 system.
- 32 - Used to allocate 32 ports in a Base 16 system.
- 40 - Used to allocate 40 ports in a Base 16 system.
- 48 - Used to allocate 48 ports in a Base 16 system.
- 56 - Used to allocate 56 ports in a Base 16 system.
- 64 - Used to allocate 64 ports in a Base 16 system.

The screenshot shows a window titled "Port Allocation Table" with a table containing columns for Slot, Type, and Allocated. A dropdown menu is open over the "Allocated" column of row 001, displaying the following options: -, 8, 8 + 8, 16, 24, 32, 40, 48, 56, and 64. The "64" option is currently selected and highlighted in blue.

Slot	Type	Allocated
001	MADI-64	16
002	AIO-16	-
003	RVON-16	8 + 8
004	-	16
005	MADI-64	24
006	-	32
007	-	40
		48
		56
		64

FIGURE 33. Allocated Menu Options

Ports Columns (4)

The **Ports** column is used to assign ports in either groups of eight (8) or 16 ports, depending on what is selected in the Allocated column.

Up to four (4) groups of 16 ports are allowed.

TIP: To assist in setup and configuration debug, assign consecutive port numbers for multi-group port columns.

NOTE: The Ports column only becomes active for the number of ports you are allocating. For example, if you have 32 ports, only the first two (2) Ports columns are enabled.

The screenshot shows a window titled "Port Allocation Table" with a table containing columns for Slot, Type, Allocated, Ports, and Port Range. A dropdown menu is open for the Ports column of slot 003, showing options like "001 - 016", "033 - 048", "057 - 072", etc. Slots 001, 005, and 009 are highlighted in yellow.

Slot	Type	Allocated	Ports	Port Range
001	MADI-64	16	001 - 016	
002	AID-16	16	-	
003	RVON-16	8 + 8	001 - 016	209
004	-	-	033 - 048	
005	MADI-64	64	057 - 072	
006	-	-	065 - 080	
007	-	-	073 - 088	
008	AID-16	-	081 - 096	
009	MADI-64	64	089 - 104	145
010	MADI-64	64	097 - 112	81
	MADI-64	-	105 - 120	
			113 - 128	
			193 - 208	
			217 - 232	
			225 - 240	
			233 - 248	
			241 - 256	

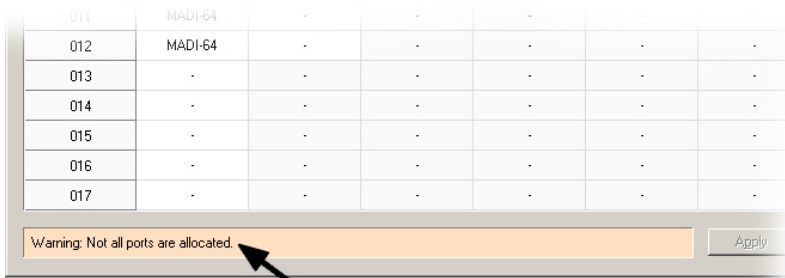

FIGURE 34. Ports Column Options

Warning Column

The **Warning** column displays a warning when configured card types do not match detected card types and when not all ports are allocated (for a given card, or for the intercom as a whole).

Warning Field

The **Warning** field displays warnings pertaining to the intercom system as a whole.

The screenshot shows a window titled 'Port Allocation Table Window'. It contains a table with 7 columns and 7 rows. The first row has '011' in the first column and 'MADI-64' in the second column. The second row has '012' in the first column and 'MADI-64' in the second column. The remaining rows (013-017) have dashes in the first column and dashes in the second column. Below the table is a warning field with an orange background and the text 'Warning: Not all ports are allocated.' To the right of the warning field is an 'Apply' button. An arrow points from the text 'Warning Field' below the screenshot to the warning field.

011	MADI-64	-	-	-	-	-
012	MADI-64	-	-	-	-	-
013	-	-	-	-	-	-
014	-	-	-	-	-	-
015	-	-	-	-	-	-
016	-	-	-	-	-	-
017	-	-	-	-	-	-

Warning Field

FIGURE 35. Warning Field

Apply Button

The **Apply** button is used to apply any modifications made to the port allocation table to the intercom system while the window remains open.

Test Button

The **Test** button is used to test the modifications you made to the port allocation table before you apply it to the intercom system. A message displays when the test is finished notifying you if the port allocation table is valid or not.

Cancel Button

The **Cancel** button is used to close the window without implementing any of the modifications made to the port allocation window.
