Amkette FlashLink Suite Virtual Drive
User Manual

Introduction

The Flash Link Suite program is used to transfer data between two computers. It has several useful functions for you to view or manage files on two computers at the same time.
Connect with two PCs

(1) Connect the USB Flash Drive to your computer. You should see three removable disk drives: Flash Link Suite Virtual Drive , USB DISK Drive and Virtual Link.

(2) Connect the USB Flash Drive to the other computer through its mini-USB port with the USB cable, you should see Flash Link Virtual Drive and Virtual Link (without the USB DISK Drive).

Launch FlashLink Suite

Users only need to launch FlashLink Suite on your PC; the other PC will launch FlashLink Suite automatically when it connects to your PC via the USB cable. Firstly, connect the USB cable between two PCs.

Note: If two PCs are not connected, the warning as in the figure on the right will pop-up to remind users.

Please use USB cable to connect two computers.

If the USB transfer cable has been connected to both the computers and yet FlashLink Suite program hasn't been launched; please run FlashLink Suite from the disk drive

Remote Share

If your computer doesn't have Internet access nor CD Drive, how can you use these two essential features from other computers? Or you wish to share CD Drive or Internet access with other computers, what can you do about it? Remote Share is the best solution. Remote Share is a user-friendly application which allows you to share and use Internet or data on the CD Drive with the other computer via a simple high-speed USB transfer cable connecting both computers.
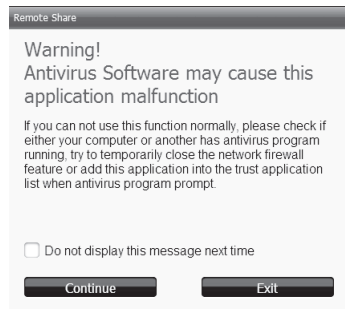

Note: The Remote Share function is not supported by Windows 2000 OS.

• How to use
After FlashLink Suite is connected successfully to both computers, you can simply click "Remote Share" on the operation panel of FlashLink Suite.

A warning window will pop up to remind you to close the antivirus program of your computer first and then execute "share and use Internet or data on the CD Drive with the other computer". Select "Do not display this message next time" if you don't want to see this message again. Press "Continue" to execute Remote Share. Press "Exit" to abort it.

The steps of executing Remote Share are as followings:
• Make the connection between two computers
Press "Remote Share" to start the communication with the other computer and wait for the response. Select "Cancel the connection", if you wish to abort it.

• Features of Remote Share
Once Remote Share is connected to both computers, you can press use/share CD Drive or share/use Internet of the other computer.

Powerful function of Remote Share
1. Use CD Drive:
Click "I will use CD Drive of the other computer" to open the data such as movies, music, photos, etc of the remote CD Drive by " Open Windows Explorer" which shows as "The other computer's CD Drive" in my computer. If the other computer doesn't have CD

---

the powerful function of "CD Drive Share" of "Remote Share" is to use the CD Drive of the computer which has CD Drive.

2. Share Internet :
If your computer is connected to the Internet, you can press "I will share my Internet" to share the Internet with the other computer which is disconnected from the Internet.
If your computer is not connected to the Internet & the other computer is connected to the Internet, and its OS is higher than Windows 2000, press "I will use remote Internet resource" to use Internet of the other PC which is connected to Internet.
If the computer which is connected to Internet is Windows 2000, it doesn't support Internet share, so that the other computer cannot use Internet share feature, either.
When Internet is being shared, the system tray will show the status of Internet sharing. Once Internet share is launched successfully, the selection of "Internet resource" will disappear.
E.g.: If you travel with your NB and wish to use Internet without wireless services nor LAN cable, Internet Resource Share of Remote Share can help you easily use the other computer's Internet resource via the connection between two PCs.
3. About Remote Share
Click on the top right corner of the main panel of Remote Share, the version of Remote Share is shown here.

• Minimize
Click on the top right corner of the main panel of Remote Share, to minimiseit to the systemtray. You can click its icon to launch it again.

• Exit Remote Share
Click "X" on the the top right corner of the main panel of Remote Share, a dialogue window will pop up" Do you want to exit Remote Share?". Click "Yes" to close Remote Share.

Then, both computers will switch to FlashLink Suite main panel; meanwhile, a dialogue window will pop up "You are ready to use FlashLink Suite now". If the main panel of FlashLink Suite does not open automatically, please re-plug in the cable or open "My Computer" and double click "GO Suite" drive to start it.

• Supplementary
1. If both computers are connected to each other, unplug USB transfer cable, Remote Share will close promptly.
2. If both computers are connected successfully, re-plug in the USB transfer cable, a pop-up window of "Try to recover the connection with the other computer" will remind you.
3. If it fails to connect to both PCs, Remote Share will ask you to re-plug in the USB transfer cable. Make sure the panel of Remote Share disappear first and then re-plug in the USB transfer cable to both PCs.
4. If either of or both computers are restarted or re-logged in, two conditions may occur:
    a. The USB transfer cable still connected to both computers; a warning window "resume connection" will pop up.
    b. If the transfer cable is disconnected from both computers, Remote Share will exit automatically.
