Interesting facilities

You can relax and listen to music and watch slideshow or watch the video.

Working with databases

In phpmyadmin there is a database with three tables.

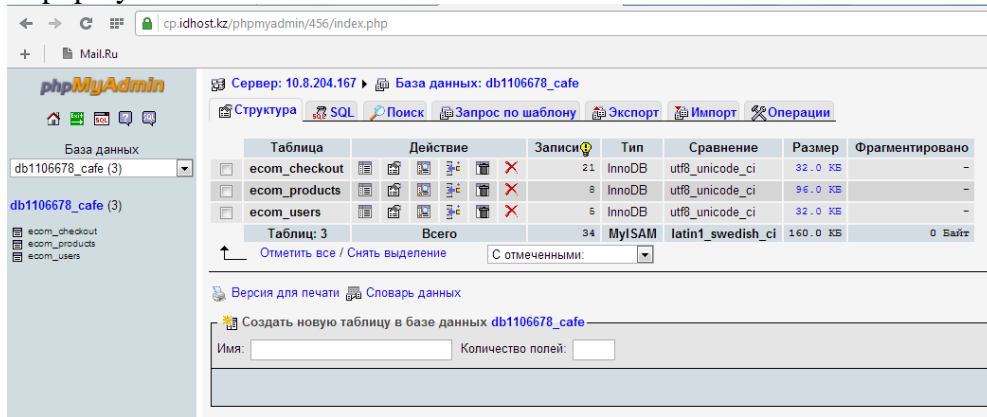

Table “products” consists of data about products, food which can be bought. Administrator can add new products or update/delete information about them

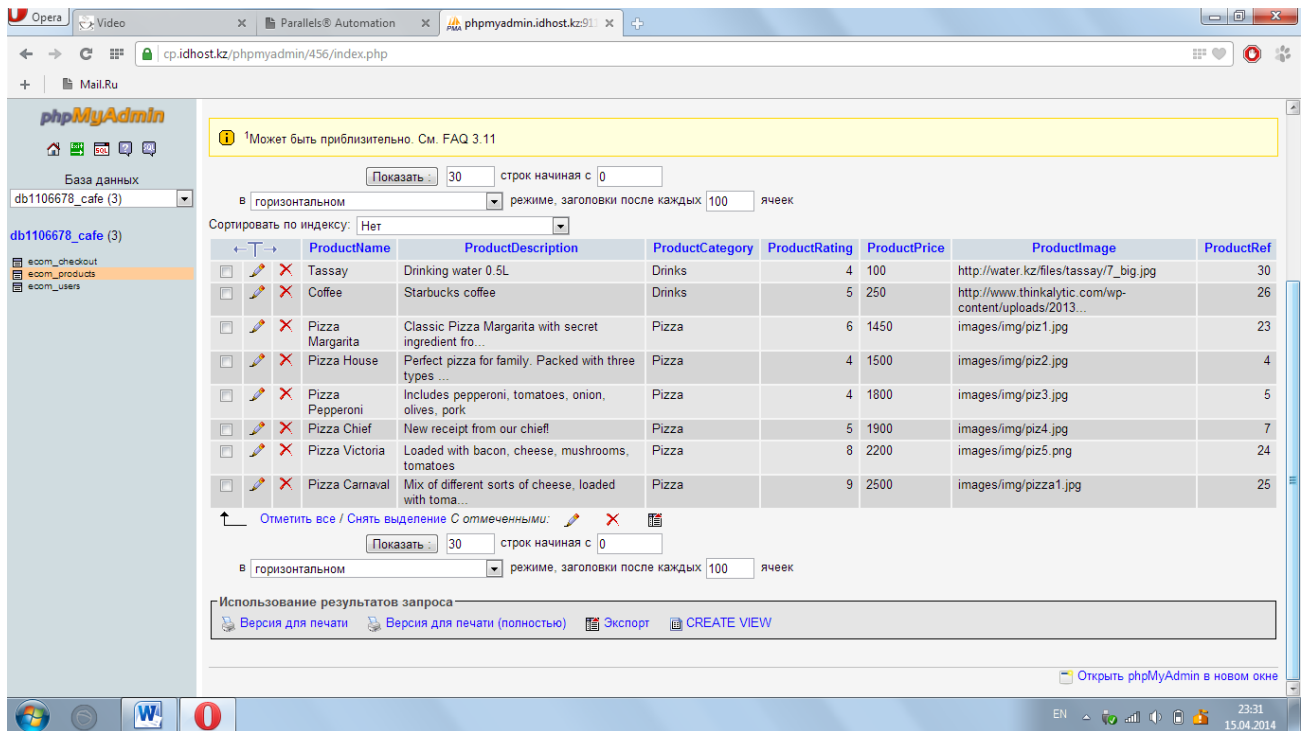

Table "Users" have information about registered people

Сервер: 10.8.204.167 | База данных: db1106678_cafe | Таблица: ecom_users "InnoDB free: 8192 kB"

Обзор | Структура | SQL | Поиск | Вставить | Экспорт | Импорт | Операции | Очистить | Удалить

Отображает строки 0 - 4 (-5¹ всего, запрос занял 0.0100 сек.)

SQL-запрос:

```
SELECT
FROM 'ecom_users'
LIMIT 0, 30
```

1 Может быть приблизительно. См. FAQ 3.11

Back-up Routine

The copy of the whole system is stored on server, but it is recommended for administrators to have another copy on their USB drives.

Glossary

Form: HTML forms are used to pass data to a server. An HTML form can contain input elements like text fields, checkboxes, radio-buttons, submit buttons and more. A form can also contain select lists, textarea, fieldset, legend, and label elements.

Query: a question or a request. We can **query** a database for specific information and have a recordset returned.

PhpMyAdmin: is a free software tool written in PHP, intended to handle the administration of MySQL over the Web.

SQL: SQL is a standard language for accessing databases.

Report: the formatted result of database queries and contain useful data for decision-making and analysis.
