1. Overview

The Netphone-KU1120 is an exquisite and portable VoIP phone which is used just like a regular telephone. It connects with your computer using the USB interface and transmits voice over the Internet. The KU1120 will greatly reduce your international long distance costs.

2. Package Contents

The following items are included in the box:

- Netphone-KU1120 phone set
- USB Cable
- User's Manual

3. Installation and Configuration

3.1 Setup Requirements

You must supply:

- 233MHz Intel Pentium II or above, 32MB of RAM (Recommend 64MB or more), 10MB Hard drive
- Computer must have USB 1.1 interface or above
- Microsoft Windows 98 SE/ME/2000/XP
- Internet access with a connection speed above 28.8kbps

NOTE: If your system has a firewall (e.g. Windows XP's Internet firewall), or you are using a proxy to provide Internet access then you may experience difficulties getting the Netphone to connect to our server. If so, please contact your network administrator or our technical support.

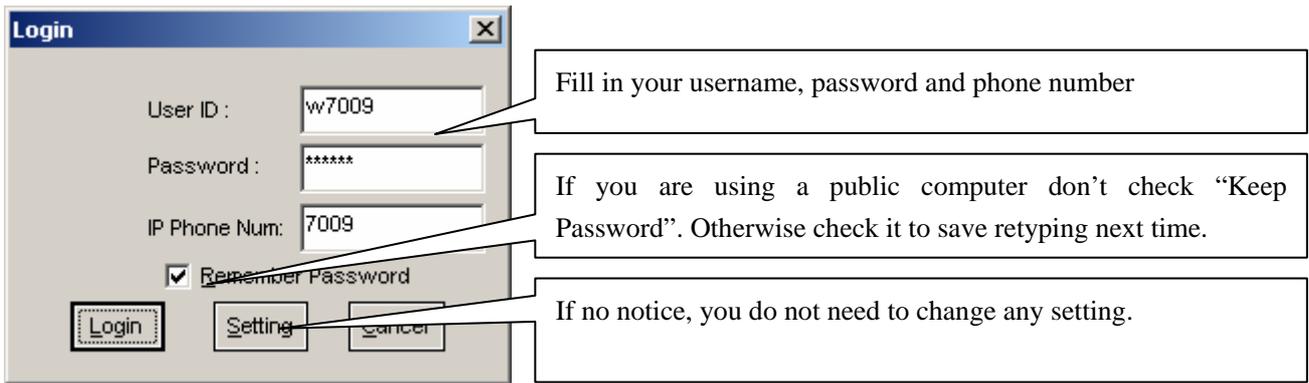

Here we make our announcement formally. If you use SIS chipset on the main board, you might hear distorted voice and noise. In this kind of situation, we suggest installing our SIS patch, however, our SIS patch can not take effect on Windows 98 SE and some type of SIS chipset.

3.2 Installation

- A. Download the Netphone-KU1120 from service carrier's website or insert the Netphone-KU1120 installation CD. (If your CD-ROM does not run it automatically, you can run the exe. File manually).
- B. Select language version and start installation.
- C. If you have ever installed Netphone-KU1120 on your computer, you should first shut down the client software by the indication during installation and uninstall it, then run the installation software once again.
- D. Please follow the instructions in the pop up windows to install Netphone-KU1120's installation software.
- E. Restart your computer.
- F. Connect the Netphone-KU1120 USB cable to the USB interface on your computer.
- G. Windows will automatically detect Netphone. Your computer would recognize Netphone, if you are asked to confirm the new device, please accept it.

3.3 Configuration

- (1) Double click the white icon, which will now be on your desktop and complete your name, password and Netphone-KU1120 number.

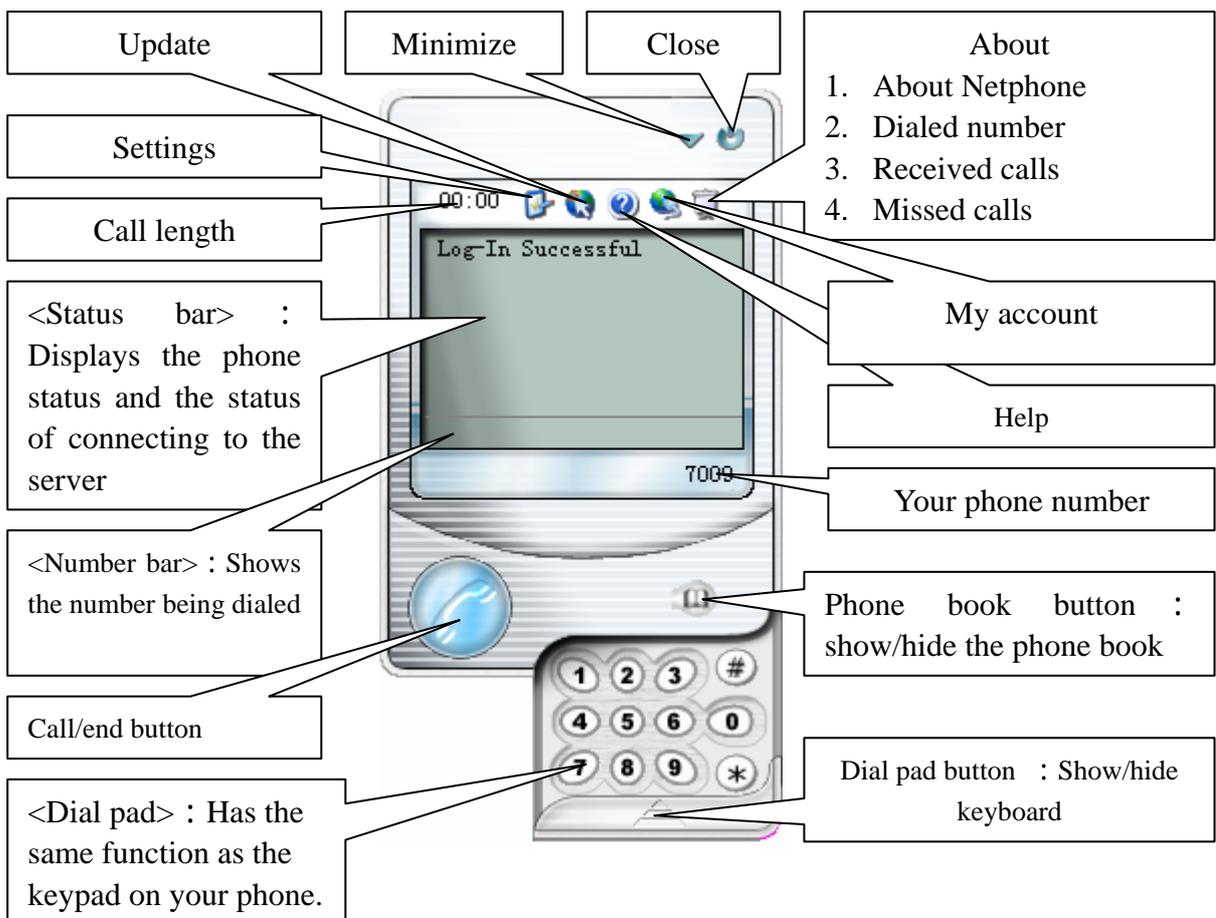

(2) Click 

4. Phone Function

Press C key to clear what you have input.

4.2.9 Caller ID display

You can see the incoming caller's number in the on-screen status bar.

4.2.10 Use * to correct a number

If you make an error while dialing a phone number you can use the * key to back up one number. For example, if you dialed 620, but you meant to dial 621, just hit the "*" key to backspace then correct and continue.

5. Service Features

- Netphone calling Netphone
- Netphone calling Regular Phone
- Call Forwarding
- Regular Phone Calling Netphone (As for Access Number, please refer to the service carrier's website)
- Conferencing

5.1 Netphone Calling Netphone

Every Netphone will be assigned a Netphone number. Netphone users can directly call each other's number.

Example: A user with the number 6667777 calling another user with the number 7778888.

The 6667777 simply press  to enter dialing state and dial 7778888 .

5.2 Netphone Calling Regular Phone

Every Netphone user can call any land or mobile phone anywhere in the world. Please dial with the service carrier's dialing rule. Press  or # key after inputting the telephone number.

Example 1: If a U.S service carrier's dialing rule: To call a U.S or Canada number, please first dial 1, then the telephone number.

Netphone calling a U.S/Canada regular number 213-666-8888.

Press  to enter dialing state and dial 1-213-666-8888 .

Example 2: If a U.S service carrier's dialing rule: To call other countries' regular numbers, please first dial 011, then the country code (no '0' as prefix), and dial the telephone number at last.

Netphone user calling a China regular number 0755-88889999.

Press  to enter dialing state and dial 0118675588889999 .

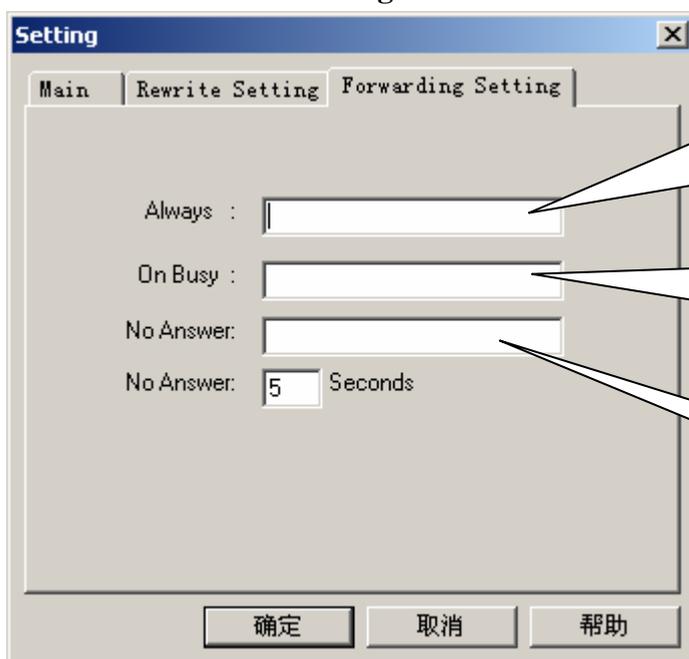

Example 3: If a China service carrier's dialing rule: To call other countries' regular numbers, please dial the district code, and dial the telephone at last.

Netphone user calling a China regular number 0755-88889999.

Press  to enter dialing state and dial 075588889999 .

5.3 Call Forwarding

➤ Online Call Forwarding

The incoming call will unconditional /always forward to the number you have set here
If this "always" function is effective, the below two don't work

When the phone is busy, the incoming call will automatically forward to the number you have set here before

If the no answer time exceeds the time value you have set, the incoming call will automatically forward to the number you set here before

NOTE: Call forwarding target number must be a PSTN number, with more than 7 digits.

➤ Offline Call Forwarding

Netphone also has call forwarding feature, when the user is not online, the incoming call can be forwarded to a preset telephone number.

Settings:

Enter my account page on service website to set the forwarded number. The number must accord with service carrier's dialing rule.

User Information

User ID	lyc77
IP Phone Number	7777777
Balance(US\$)	222.00
Status	Normal
Payment Option	Prepay

Company	<input type="text" value="234"/>
Contact Telephone Number	<input type="text" value="132132132"/>
Email	<input type="text" value="65465@ncuid.com"/>
Call forwarding number	<input type="text" value="16664747"/>
<input type="button" value="Submit"/> <input type="button" value="Reset"/>	

Please type in the target number, which will be forwarded to.

NOTE: Call forwarding target number must be a PSTN number, with more than 7 digits.

Example 3: If a China service carrier's dialing rule: To call other countries' regular numbers, please dial the district code, and dial the telephone at last.

Netphone user want to make a call forward to 0755-88889999. Netphone user can fill in 075588889999.

5.4 Regular Phone calling Netphone

This is an optional service. Only areas that provides Netphone access numbers allow calls from a regular phone to Netphone, for detail please refer to 'Access Number List' on the Carrier Service page.

5.5 Conferencing

How it Works

Once the conferencing call feature has been set-up on your account, you can initiate a conference and have a conference with different parties simultaneously. You will act as a 'Host' and invite 'Participants' into the conference that you initiated.

Setting yourself up for conference calling now

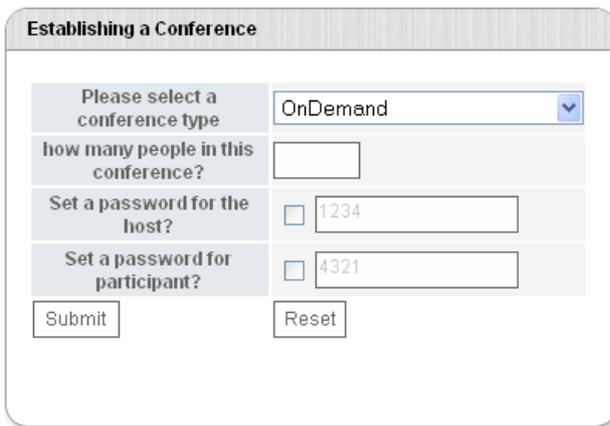

- Go to “My Account” interface

- Enter your IP Phone Number, Password and the digits displayed then click Submit.

My Home | My Rates | My Bill | My Call Record | My Payment | My Password | My Language | My Conference Call | Log Out

- Click “My Conference Call” in the grey menu bar to view the Conference Call Setup:

- Enter the maximum number of people you will likely be conferencing with at one time.
- In some circumstances a password will be required for the Host and Participant to be involved in the conference.
- Click on the check boxes to select the defaults of 1234 and 4321 to be the password or change them to something else you will remember easily. (If you do not click on the check boxes a random password will be chosen and advised to you.)
- Click Submit and your conference feature will be established.

How to initiate a conference call and invite others.

You, as the Host, enter the conference and bring the other participants into the call:

Steps in Detail:

- A. Dial access number, followed by # from your Phone.
- B. You will hear a beep tone confirming that you have entered the conference room. Now press # to invite a Participant to the conference room. After hearing the voice prompt ‘Please enter the destination phone number followed by the pound key’, dial the phone number of the person you want to bring into the conference and then press #. After the Participant answers, press # to add this participant to the conference. Alternatively if you dialed the wrong number or the Participant does not answer just press the “*” key and you will be returned to the conference without the Participant.

- C. To invite another participant, press #, wait for prompt, dial next participant's phone number followed by #, wait for answer and then press # to join them into conference. Repeat this process to invite more participants into the conference. Remember you can use * if you want to return to the conference without the Participant.

Note: You can conference other users by simply dialing their Phone number followed by #. For Participants with regular phone just dial the international dialing prefix followed by their regular telephone number and then press #.

How to have participants to enter the conference room themselves

Any participant that has a Netphone can dial our participant access number to enter an active conference himself or herself. However the conference call needs to have already been initiated by the Host before the participant can join.

Steps in Detail:

- A. The Host must setup the Participant Password on the "My Account" web site. The Host must then tell the Participants the conference ID and the Participant password.
- B. Host initiates the Conference by dialing, host access number + #.
- C. Participant dials participant access number + #. Participant will hear the prompt 'To join a conference, press 1. To listen to a conference recording, press 2. To access your messages, press 3. To leave a voice mail, press the star key'. Participant should then press 1 and will hear the prompt "Please enter conference ID". Participant should then enter the conference ID (Host's Phone number) followed by #. Finally Participant will hear the prompt "Please enter the conference password followed by the # key" and should then enter the Participant password followed by # to enter the conference.
- D. Other participants can follow the same process as mentioned in C. to join the conference.

Note: Participants who only have a regular phone and are located in USA, Hong Kong or Taiwan can enter the conference from their regular phone by dialing the local access number (contact us for details) and once connected can dial participant access number + # as above. Otherwise the participant can only be invited into the conference by host

6. Frequent Problems and Answer

Problem	Possible Cause	Solution
The account is being used	Somebody else is using your account or you did not log out properly last time you used it.	Please make sure your account number is not being used by anyone else. Restart your computer and log in again.
