# Chapter 1: Introduction

## Overview

- Sienna ToolPak runs on Windows® NT 4.0 Platforms.
- ToolPak is an add-on, software program that requires Sienna Job Control to be fully operational and complete connectivity established with the printer in order to function.
- Users can control queuing, previewing, and printing of single or multiple copies. Users of ToolPak can also change page format, copy count, and color management.
- ToolPak makes printing intuitive and simple. It works seamlessly with Sienna Job Control by sharing a directory assessible to both Job Control and ToolPak.

The following diagram presents an overview of the hardware and software relationships between ToolPak and Job Control:

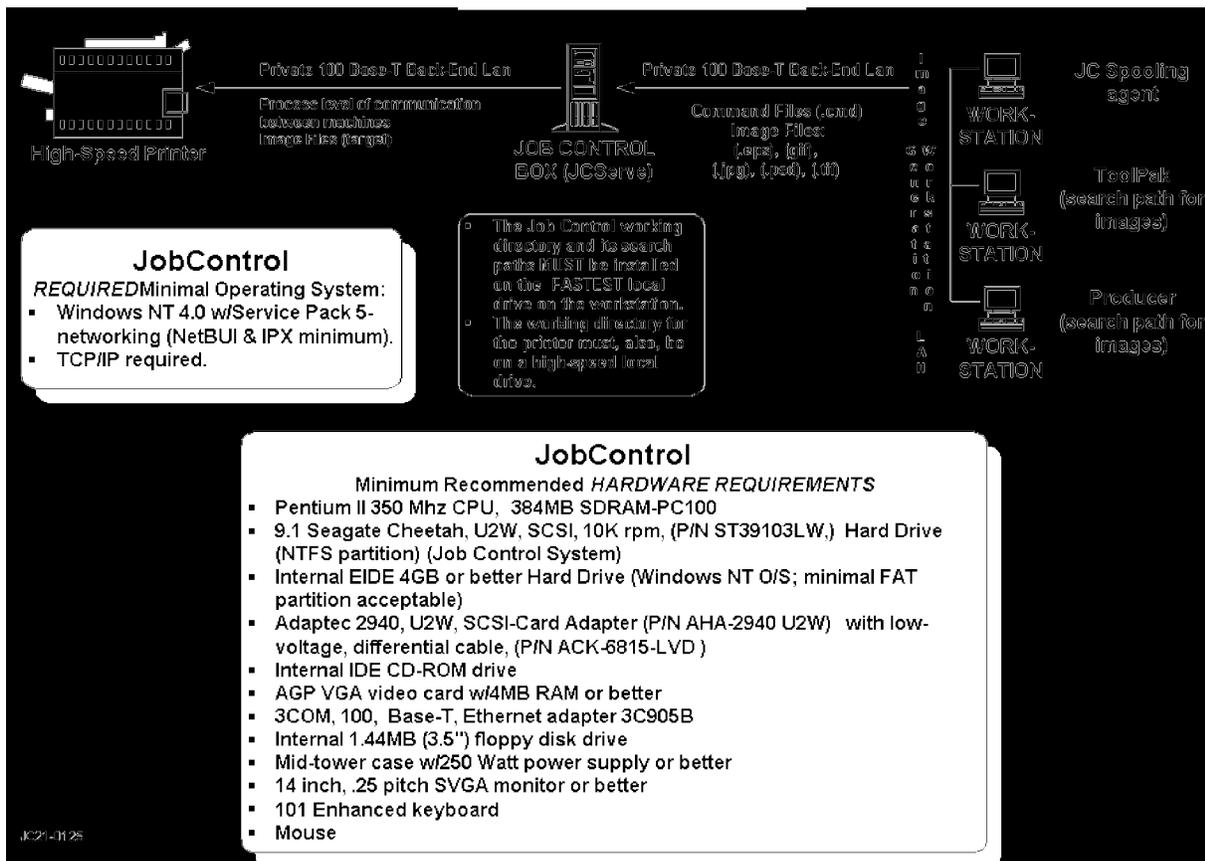

Figure 1: Sienna Product Overview

## *Features*

### *Queuing*

ToolPak provides queuing for different image files that allow for unattended print. Each individual file listed can reference color controls, page formats, and number of copies to print. You can process several files with different file and page formats by selecting and queuing them with a click.

### *File Formats*

ToolPak supports all of the formats utilized by Job Control. See **Appendix A - Image File Formats**.

### *Image Layout*

This feature allows the user to preview the layout on the page of an image before imaging. This ensures that the image is positioned as desired.

### *Preview*

This feature allows the user to preview a selected image file before printing. This verifies that the desired image is the correct one.

### *Sienna Server*

The user can print directly from ToolPak to Job Control. Selecting any number of images and clicking on the Printer icon prepares a batch job. The server then sends it to Job Control for processing.

### *Page Format*

The user can change page formats through ToolPak. Clicking on the appropriate icon and dialog box provides options for the changes desired.

## *General*

The files containing images to be printed may be located anywhere in the network. With ToolPak, each workstation is capable of submitting prints to the Job Control Server, which then performs the requested printing options and submits the image(s) to the Mileca printer.

### *ToolPak Version Check*

To check the version of ToolPak:

1. Click on the help button of the main ToolPak screen. The following window will appear:

Figure 2: *About ToolPak window*

2. Click "OK" to return to the main ToolPak screen.

## *System Software Requirements*

Sienna recommends the following minimal requirements to install and execute ToolPak for Windows software:

### *Customer Provided Operating Systems*

- Windows® NT 4.0 with Service Pack 5.

### *Sienna Imaging Software*

- Sienna ToolPak 1.2 on CD ROM.
- A Sienna Software Protection Key (HASP) is required for Windows platforms. This key is placed in the parallel port of the computer on which ToolPak is loaded.

### *Additional Required Applications Software*

- Sienna Job Control for Windows® NT 4.0 - version 2.2

**NOTE:** ToolPak cannot run without Job Control for Windows® NT 4.0 fully installed and completely operational.

## System Hardware Requirements

ToolPak will operate efficiently in a network environment on Windows® NT 4.0 workstations. The recommended hardware requirements are as follows:

**Table 1:**

Quantity	Item	Description
1	CPU:	Any Pentium
1	RAM:	32MB minimum
1	Hard Drive	2GB
	Minimum hard-drive free space for program installation	10MB
1	CD-ROM Drive:	For installation only
1	Floppy disk drive:	1.44MB, (3.5")
1	Video Card:	VGA with 2MB RAM or better-(AGP preferably)
1	Monitor	14", .25 pitch, VGA or better
1	Keyboard:	101-key, enhanced
1	Mouse	Windows Mouse

Before installing ToolPak, use the *Software Check List* below to ensure that you have all the necessary applications software.

**Table 2:**

	Software Application	Version	Nbr. of Disks
<input type="checkbox"/>	Windows® NT w/Service Pack 5	NT 4.0	N/A
<input type="checkbox"/>	Job Control 2.2 (install <b>before</b> ToolPak)	2.2	1 CD
<input type="checkbox"/>	Sienna ToolPak	1.0	1 CD

*Install the software in the order in which it appears in the following paragraphs for optimal setup.*

1. Install Windows® NT 4.0 with Service Pack 5. Make sure that this set of networking programs is installed (minimum or TCP/IP). Follow the Microsoft installation instructions.
2. Install Job Control - see the *Job Control for Windows® NT 4.0 User's Guide* for installation instructions.
3. Install ToolPak.

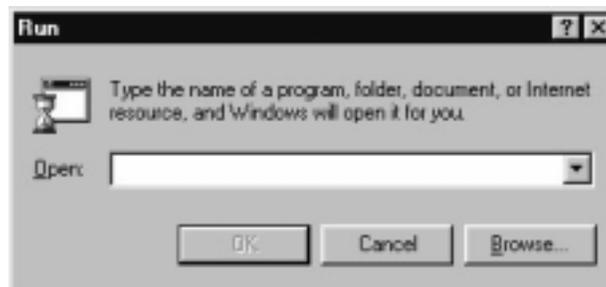

# Chapter 2: Installing ToolPak

## *ToolPak install procedure*

The following section details the ToolPak installation procedure.

### *Installing ToolPak*

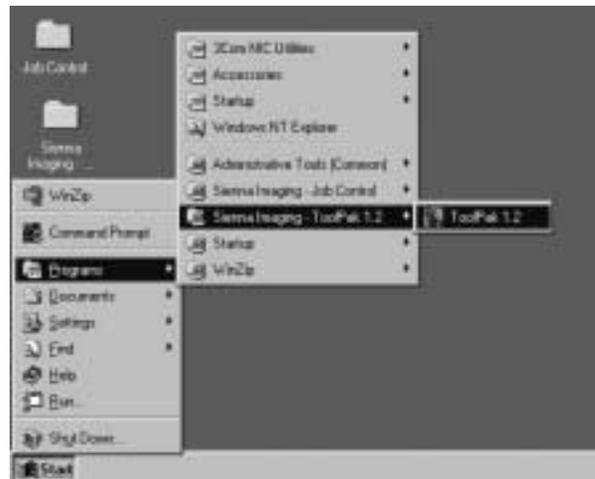

1. Insert the ToolPak CD into the CD drive.
2. Begin the installation one of *two* ways:
  - In Windows Explorer, navigate to the CD drive. Click on *setup.exe* to begin the installation.
  - Click the “Start” button. Scroll to “Run”. In the “Run” dialog box, either type the name of the ToolPak program (i.e. “D:/setup.exe”) in the “Open” text field, *or* click on “Browse” to search for *setup.exe* in the CD Drive. Click “OK”.

**Figure 2.1:** *Run Dialog Box*

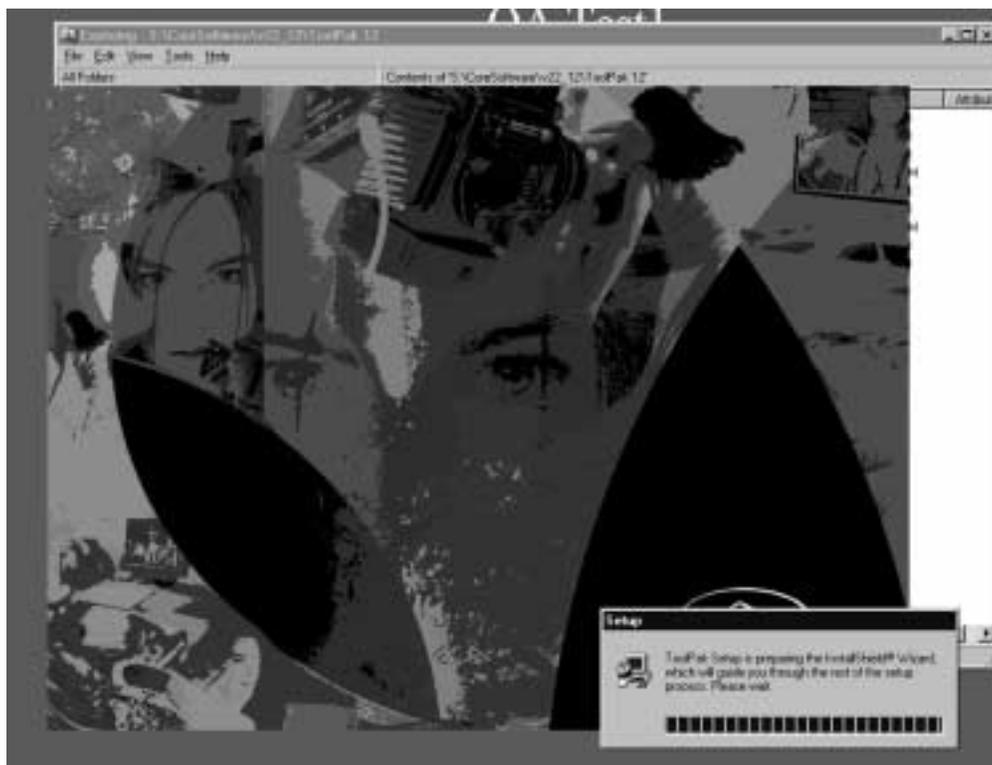

### *Configuring Tool Pak for use*

1. Click the “Start” button and scroll to “Programs”, “Sienna”, and “Job Control 2.2”.

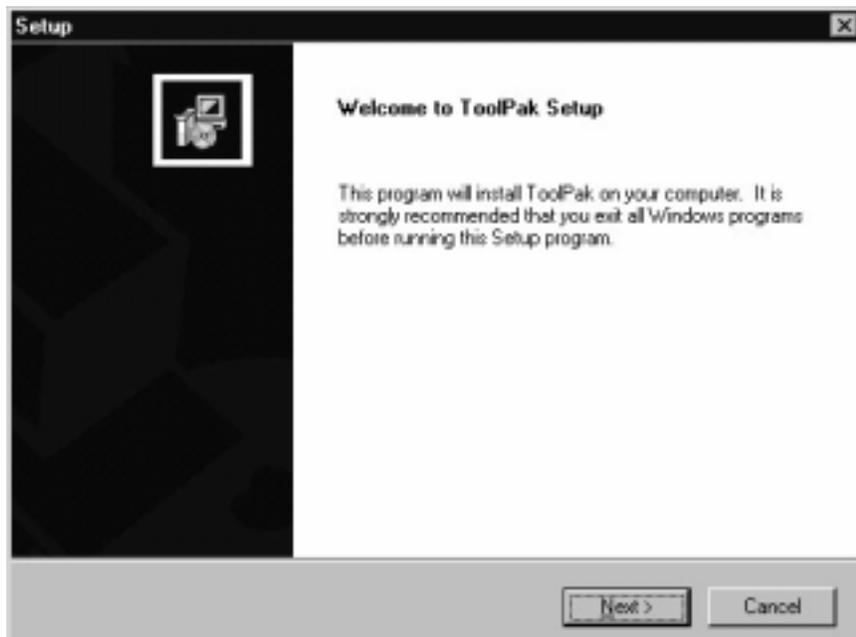

**Figure 2.2:** *Selecting Tool Pak 1.2 server*

2. The following screen will appear, indicating that Tool Pak is preparing the Install Wizard. This will assist you in the installation process.

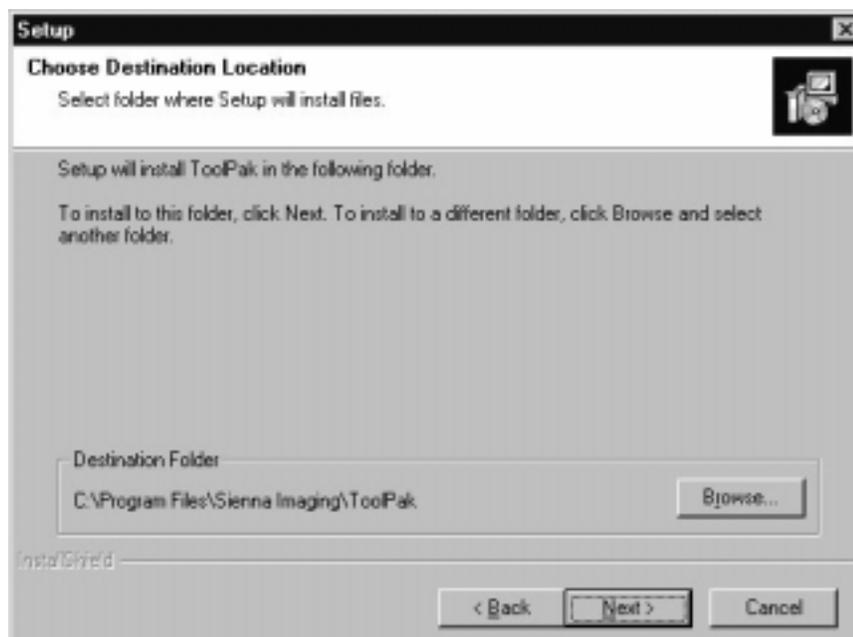

**Figure 2.3:** *InstallShield® Wizard setup screen*

3. The “Welcome to ToolPak Setup” screen will appear. We recommend that you exit all Windows programs before running the Setup program. Click “Next”.

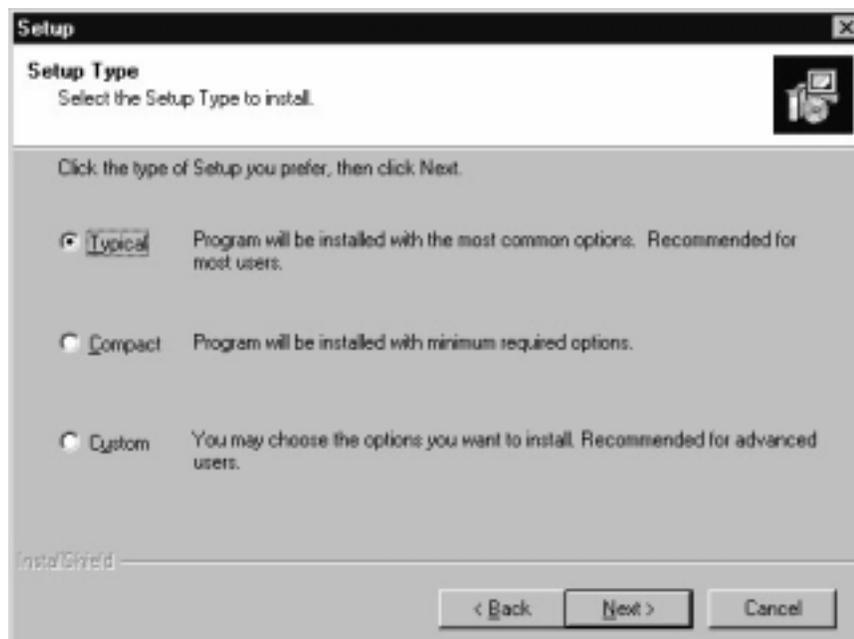

**Figure 2.4:** *Welcome to ToolPak Setup screen*

4. Select a destination folder for your files. ToolPak offers a default destination folder. If you wish to change this folder, click “Browse” to locate another folder. Click “Next”.

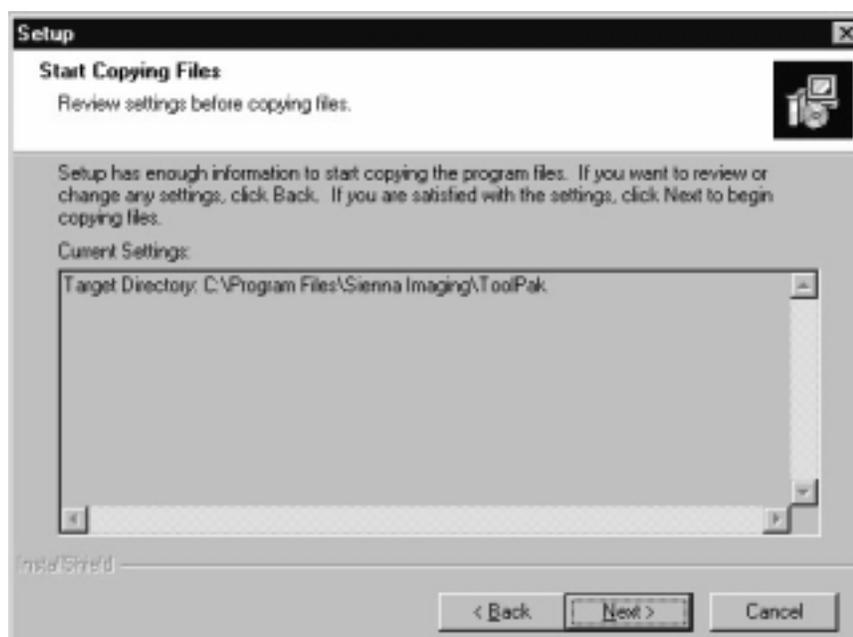

**Figure 2.5:** *Choose Destination Location screen*

5. Select the Setup Type you wish to install. Click either “Typical”, “Compact”, or “Custom”. Click “Next”.

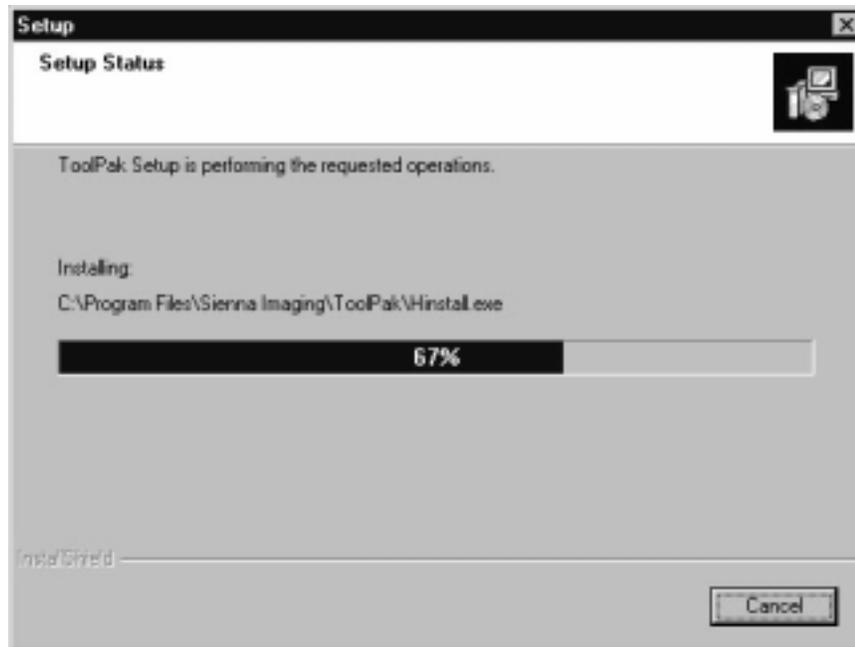

**Figure 2.6:** Setup Type screen

6. The “Start Copying Files” screen will appear. If you wish to change any settings, click “Back”; otherwise click “Next”.

**Figure 2.7:** Start Copying Files screen

- The “Setup Status” screen will appear. The blue status bar indicates the progress of the Tool Pak installation. The installation procedure will advance to the next screen upon reaching 100%.

**Figure 2.8:** *Setup Status screen*

8. Setup is now complete. Click “Finish” to exit the setup process. Click “Back” if you wish to change any settings.

**Figure 2.9:** *Setup Complete screen*

# Chapter 3: Using ToolPak

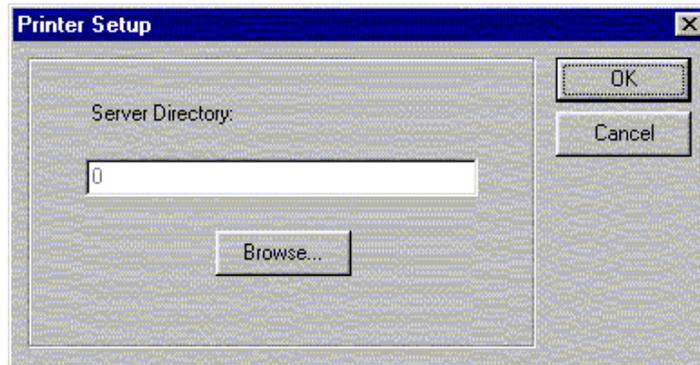

## *Before Using ToolPak*

1. Before ToolPak can be run, JobControl has to be operating and have connectivity established to the Mileca.
2. Before ToolPak can be run, JobControl has to be operating and have connectivity established to the Mileca. Create a directory using Windows Explorer on a machine that is accessible to both JobControl and ToolPak. This directory, known as the “Mileca Directory,” or as the search path, is used by ToolPak to communicate with JobControl. This is done by on the workstation where ToolPak resides.
3. Add this directory to JobControl Client’s and JCAgent’s search path. Please, see the JobControl for Windows NT 4.0 for User Manual on how to accomplish this.
4. After entering the Search Path in JobControl, JCAgent must be re-started. Do this by terminating JCAgent and then restarting it.

## *Executing ToolPak for the First Time*

1. Execute ToolPak by clicking on the Windows “Start” menu.
2. Select *Programs* or *Program Files*.
3. Click on the ToolPak folder.
4. Click on the  icon to run the program.

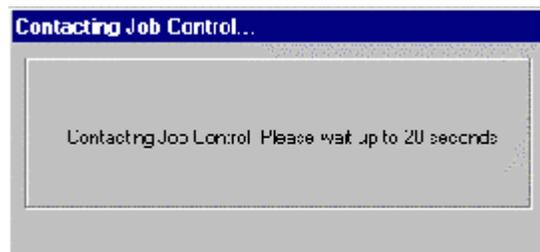

- The first time ToolPak executes, it prompts the user to enter the same Search Path that was added to Job Control, using the following dialog box:

**Figure 3.1:** *Printer Setup Dialog Box*

### ***Executing ToolPak***

- When running ToolPak, the following screen will appear:

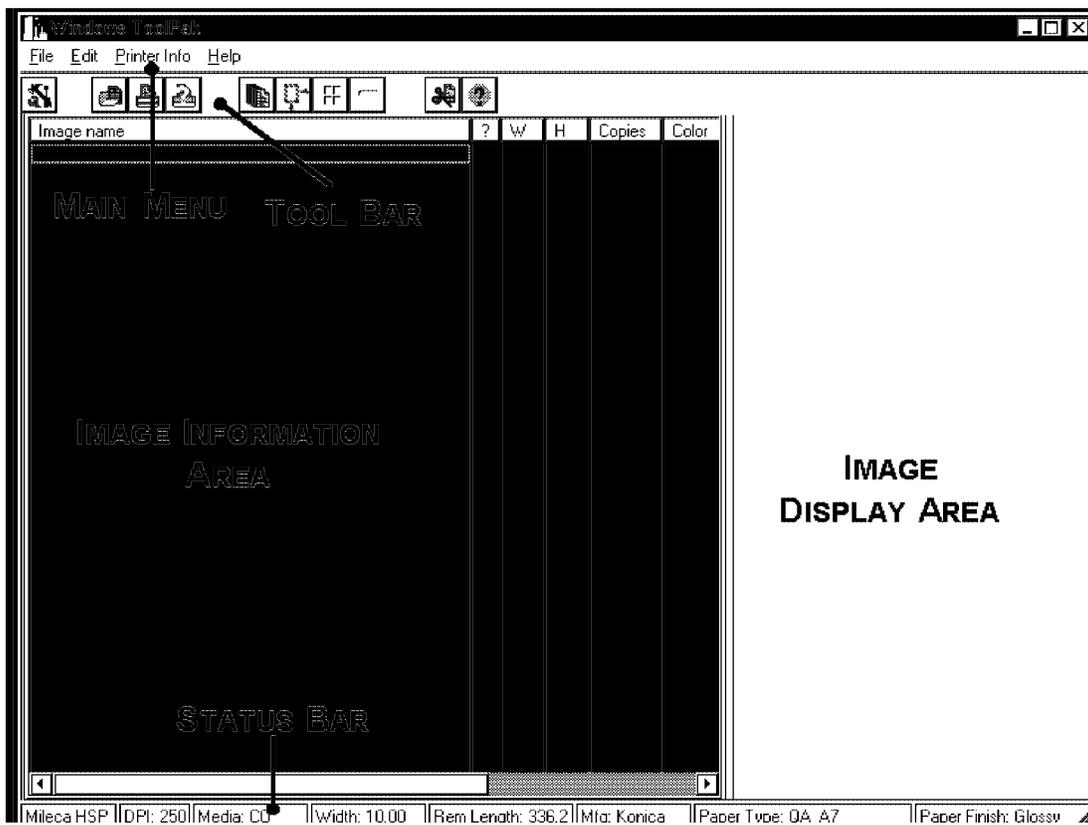

**Figure 3.2:** *Contacting Job Control... screen*

- Contact with Job Control can fail to establish a connection under the following conditions:
  - The Mileca printer was not on-line or was busy with a large batch job.
  - Job Control was not setup properly to read and write to the Search path.
  - The name of the Search path entered in Job Control is not the same as the one entered in ToolPak.

## The ToolPak Main Screen

### Screen Elements

- The ToolPak main screen contains the following elements:
- ToolPak Main Menu
- Image Information Area
- ToolPak Tool Bar
- Image Display Area
- Status Bar

**Figure 3.3:** ToolPak Main Screen

**NOTE:** In the figure above, some of the buttons on the Tool Bar are not available (they are gray). These buttons are automatically activated once when one or images is selected.

## Image Information

This area displays the names and paths of the images that are open as well as their current properties as described below. The image Information area allows the user to scroll right or left to display different columns containing image information.

### Image Name Column

This list column (Image name) displays the names and paths of the images that are open. The user selects one or more images, from this list, and assigns them for printing, formatting, color management, or the number of copies to be processed for one or more images.

See the *Printing and Formatting Images with ToolPak* chapter for instructions on how to select images for printing or formatting.

### Error Status Indicator

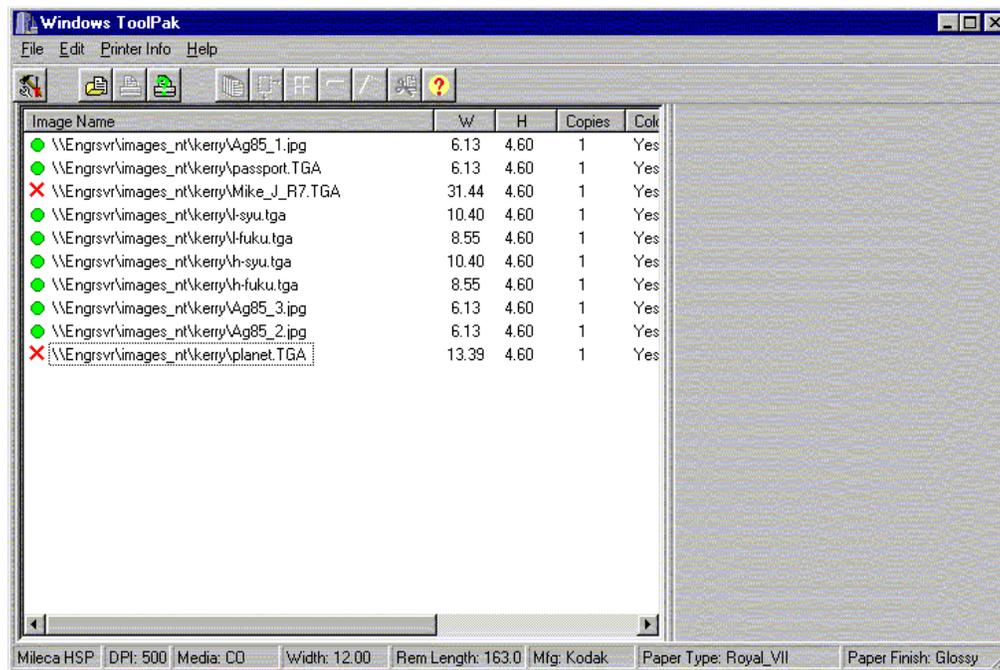

Figure 3.4: Windows ToolPak screen

- The *Error Status Indicator* appears to the left of the line in question.
- If a green button  exists, the image has no errors.
- If a red **X** exists, the terminating problems may effect the image indicated on that line. Images will still print, but all or part of the image will be clipped.

***Image Printed Width (W)***

This column (**W**) displays the printed width of the image in inches.

***Image Printed Height (H)***

This column (**H**) displays the printed height of the image in inches.

***Number of Copies***

This column (**Copies**) shows the number of copies to be printed for each image. The default is 1.

***Color Managment***

This column (**Color**) indicates that the image is to be processed with color managment. The default is yes.

**NOTE:** To locate the next three items, scroll across the screen.

***File Size***

This column indicates the size of the image file in bytes. It gives the user an idea of the time potentially required for processing.

***Format***

The graphic format of the image is displayed in this column.

***Bits/Pixels***

This column shows the number of bits/pixels contained in the image.

***ToolPak Menu and Tool Bar***

Some of the menu options have speed buttons. These allow the user to perform the same action multiple times by clicking on them repeatedly. This section identifies the buttons that are associated with the corresponding Menu Item. The actions performed, are identical when selecting the menu option or pressing the associated speed button.

The Tool bar contains a number of buttons that speed up certain functions. All of those functions are also available through the Main menu. The Tool Bar is shown below:

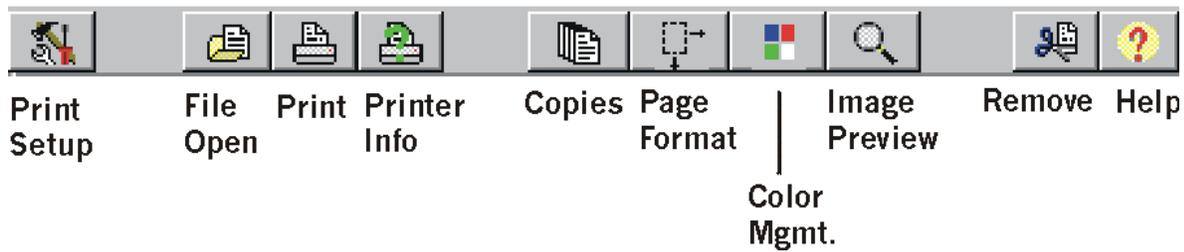

Figure 3.5: *ToolBar*

### *File Open Menu*

The *File Open Menu* contains the following commands:

- *Open*
- *Print*
- *Print All*
- *Print Setup*
- *Exit*

These are explained below in greater detail.

### *Open*

The user can select one or images for printing, with or without additional formatting in ToolPak. Selecting this option displays a standard *Open* window:

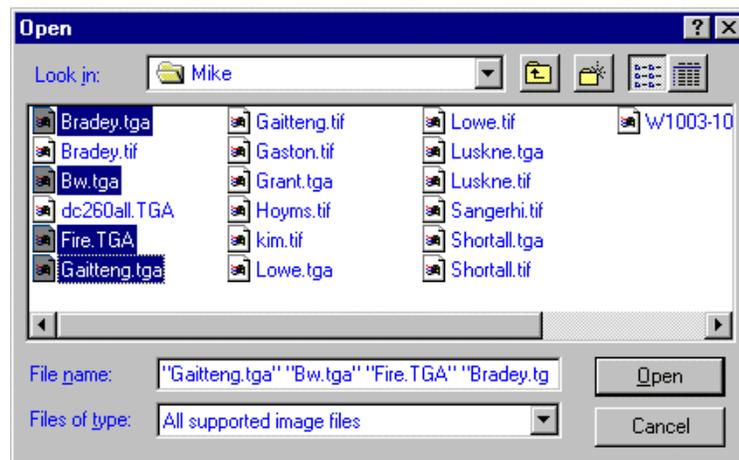

Figure 3.6: *Open Dialog Box*

### Selecting a Single Image

1. Click on the **file name**. The image will be highlighted in dark blue.
2. Click on the “Open” button.

### Selecting Multiple Images

1. For consecutive images, click on the first image. With the **Shift** key depressed, click on the last one. All images within the first and last images are selected.
2. To select images without following any particular order, click on the first one. While pressing the **Control** key, select each of the remaining images.
3. Click on the “Open” button.

### Drag and Drop Feature

You can utilize the *Drag and Drop Feature* from Windows® NT Explorer into ToolPak.

#### To drag and drop images:

1. Open Windows® NT Explorer and the source folder of the desired images. Click on the desired files.

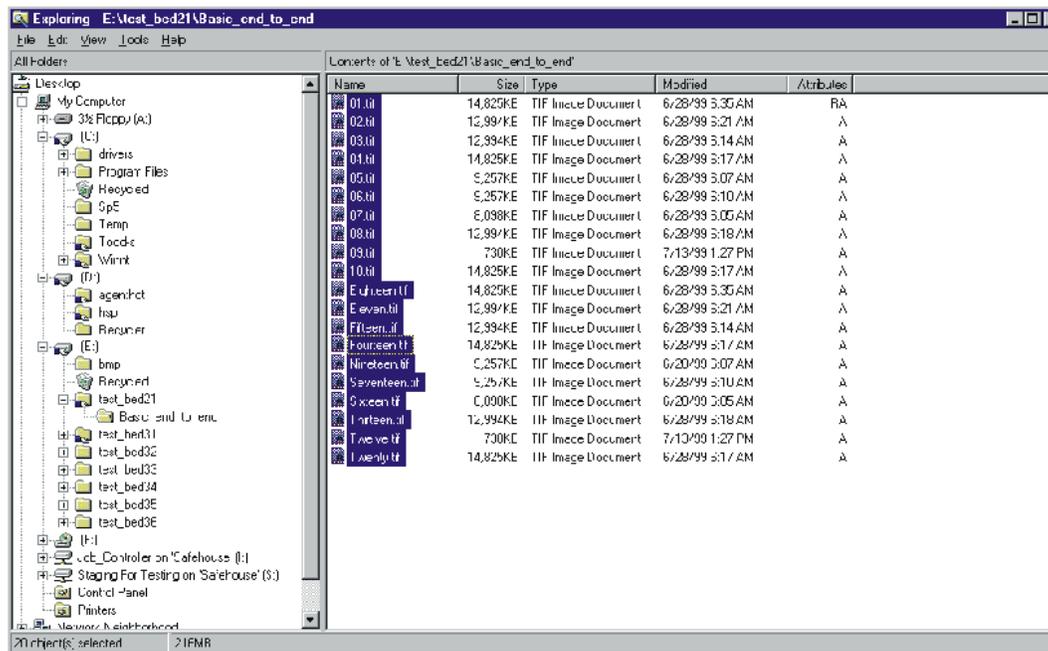

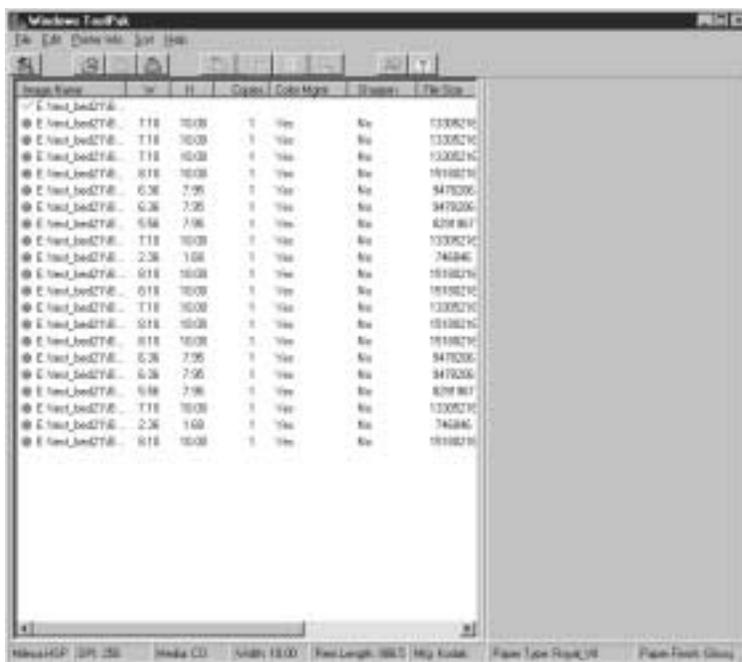

Figure 3.7: Windows Explorer screen

- In ToolPak, open the appropriate destination folder. Drag the images into this folder.

**Figure 3.8:** ToolPak Destination Folder

**NOTE:** You cannot drop an entire folder into ToolPak; you must first open the *folder* and drag its *contents* into ToolPak.

### Print/Image Information

The **Print** menu option:

- Sends the images that are selected to the printer and;
- Removes them from the main window.

The status of those images can be examined by selecting the **Print Status** menu option, or by pressing the **Print /Image Button**.

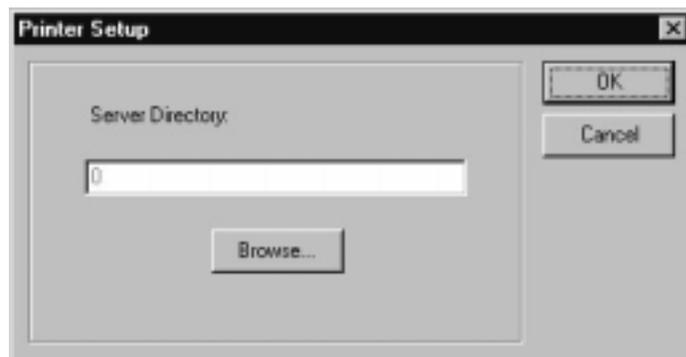

All images sent to the printer form part of a batch. Once the Mileca (HSP) starts processing that batch, no other batch can be processed until this batch has been completed. This implies that the images are printed in the same order in which they appear on the Image Status screen. No other batches are intermixed with these images.

### *Print All*

This option prints all images that appear in the **Image Information Area**.

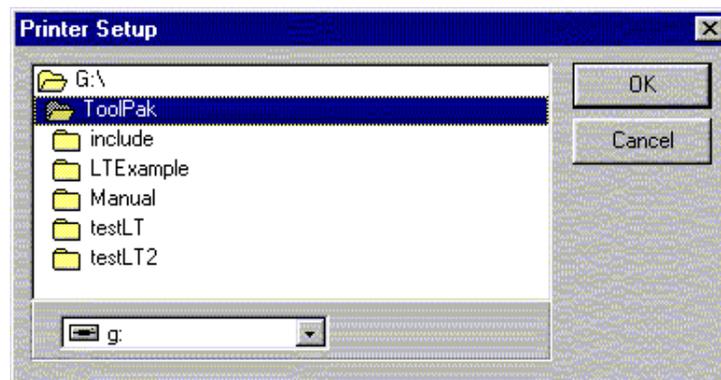

### *Print Setup*

This menu option permits the user to set up a different **Search Path** to be used with JobControl. By choosing this option, the **Printer Setup** screen below is displayed. The user must make sure that this Search Path exists, and is shared, with full access, with JobControl. In other words, the machine from which JobControl is executing must have both read and write access to the Search Path.

**Figure 3.9:** *Printer Setup Dialog Box*

The Search Path is selected by pressing the “Browse” button. Once this is done, ToolPak displays another Printer Setup screen that shows the directory structure (Directory Tree). The user then may navigate the directory structure until the proper directory is found.

**Figure 3.10:** *Printer Setup Dialog Box*

### *Exit*

This Menu option terminates ToolPak

## *Edit Menu*

### *Copies*

When this button is activated, the **Image Copies** screen will appear:

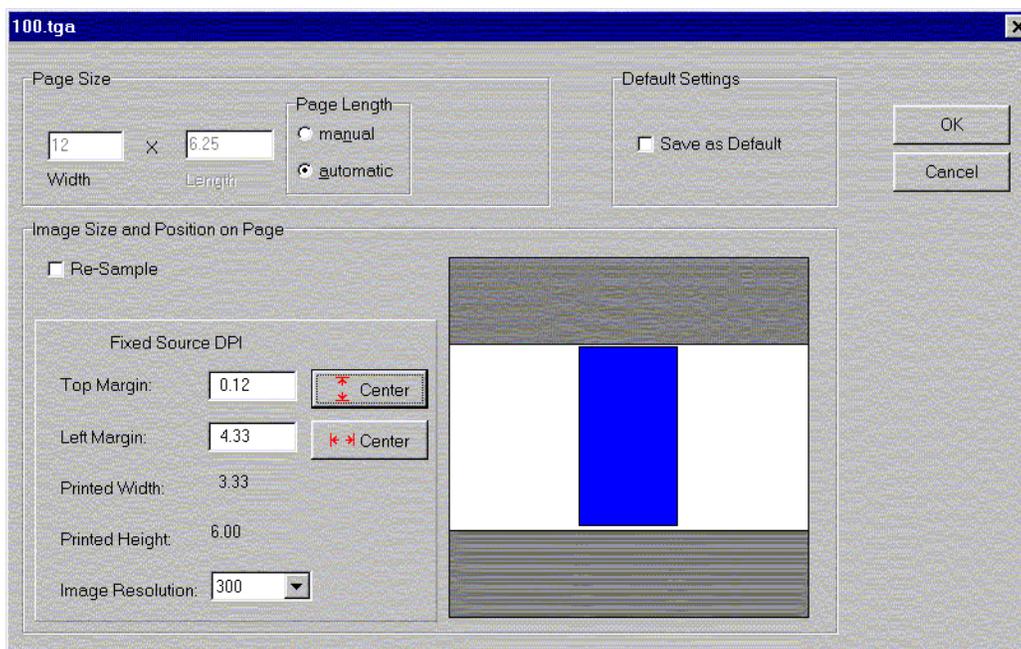

**Figure 3.11:** *Image Copies screen*

This menu and its equivalent speed button, permit the user to enter the number of copies that the printer is to produce for each of the selected images.

### *Page Format*

Pressing the **Image Format** button displays the **Image Format** window:

**Figure 3.12:** *Image Format Window*

1. The name at the top of the screen identifies *the name of the file that is being processed*. If multiple files are in process, then only the first file name in the series is displayed. The file name changes each time a file is processed or a series of files is processed.
2. All the format parameters applied in this window apply to all the images that are selected when the Image Format button is pressed.
3. The name of the image whose format is being displayed is shown on the window title bar. If more than one image is selected, the image name is followed by an ellipsis (...). However, only the format of the first image is displayed.
4. On the top, left of the window appears the width of the paper mounted on the printer at the beginning of the ToolPak session. The lower part of the window shows the top and left margins, width, height, and current resolution of the image. The right part of this frame shows a schematic of how the image will appear on the printer. The image is represented by the blue rectangle, and the page by the white rectangle.
5. The user is free to specify the left margin, top margin, page length, and the image resolution.

### *Color Management*

Selecting the **Color Management** menu option toggles the color management of the selected files.

### *Image Preview Button*

The **Image Preview** button displays a preview of the image in the **Image Preview** area. Note that for images that are not on the local machine, the time required by ToolPak to display those images is a dependent on the speed of the network.. While the image is being displayed, the mouse cursor changes to an hourglass shape. This indicates that the system is busy with the image retrieval and display task.

Images can also be viewed by double clicking the image name on the Image Information Area of the **Main Screen**.

### *Select All*

This menu option selects all images on the *Main Screen* and permits them to be submitted for processing as a single selected group.

### *Remove*

This menu option removes the selected images from the main ToolPak screen. The image files themselves are not affected.

### Remove All

This menu option removes all images from the main ToolPak screen. The image files themselves are not affected.

### Printer Info

**Printer Info** indicates the status of the batch jobs submitted to the printer. When you press this button, the *Print Results* screen will appear:

**Figure 3.13:** *Print Results Screen*

This screen updates itself even when not visible. If an error message returns the status of one or more images, the question mark on top of the printer icon changes to red.

The **Print Results** screen consists of two sections. The top portion of the screen displays the status of the images submitted for processing. If successful, those processed images appear in the **Printed** column. If an error occurred in the processing, the images appear in the **Error** column. Clicking on one of the images in the **Error** column will display the following error message:

**Figure 3.14:** *ToolPak error message*

The above error message indicates that Job Control did not possess access to the directory where the image was stored.

Pressing any of the **Clear** buttons at the bottom of list boxes (in the *Print Results* screen) will clear all of the images names contained in that list. Clearing the images that appear in the Error List sets the question mark on top of the **Printer Status** button to green.

The lower section of the *Print Results* screen displays printer information available at the beginning of the ToolPak session, including:

- Printer Type
- CRT serial number
- CRT revision level
- Software revision
- Number of images printed to date
- Exposed length of paper to date
- Current media type - CO for opaque media, and CT for transparent media.
- Paper width in inches
- Remaining length in feet
- Paper manufacturer
- Paper type
- Paper finish

**Help** 

The *Help* menu displays the ToolPak version number.

**Figure 3.15:** *ToolPak version number*

**Status Bar**

The *Status Bar* appears below:

**Figure 3.17:** *Status Bar*

The *Status Bar* contains the following information available at the beginning of each ToolPak session:

- Printer model
- Printer resolution
- Media type (CO = Opaque, CT = Transparency)
- Paper width in inches
- Remaining length of paper in supply roll in feet
- Paper manufacturer
- Paper type
- Paper finish

**Image Preview Area**

The *Image Preview Area* is explained in the next chapter.

## Chapter 4: Formatting and Printing with ToolPak

### *Selecting Images to Print or Format*

#### *Selecting one image*

1. Place the mouse cursor over the name of the image;
2. Press the left mouse button.

#### *Selecting several contiguous images*

1. Select the first image.
2. Move the cursor over the last image. While holding down the **Shift** key, press the mouse button.

#### *Selecting a number of non-contiguous images*

1. Click on the left-mouse button on each image while holding down the **Control (Ctrl)** key.
2. Clicking again on a previously selected image, while holding down the Control key, deselects it.

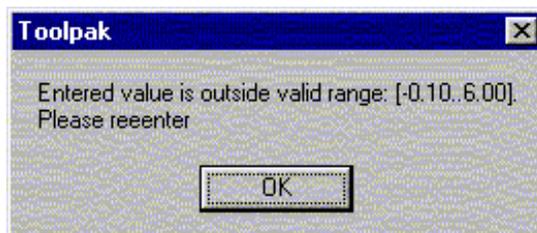

#### *Selecting several groups of contiguous images*

1. Use the **Shift** key method to select all images, including the ones you do not want to select.
2. Individually deselect the undesired images by using the **Control** key method.

### *Formatting an Image*

#### *Changing the Image Left Margin*

The left margin can range from 0.1” to 6.0”. Any other values cause ToolPak to flag it with an error as displayed below:

**Figure 4.1:** *Error message*

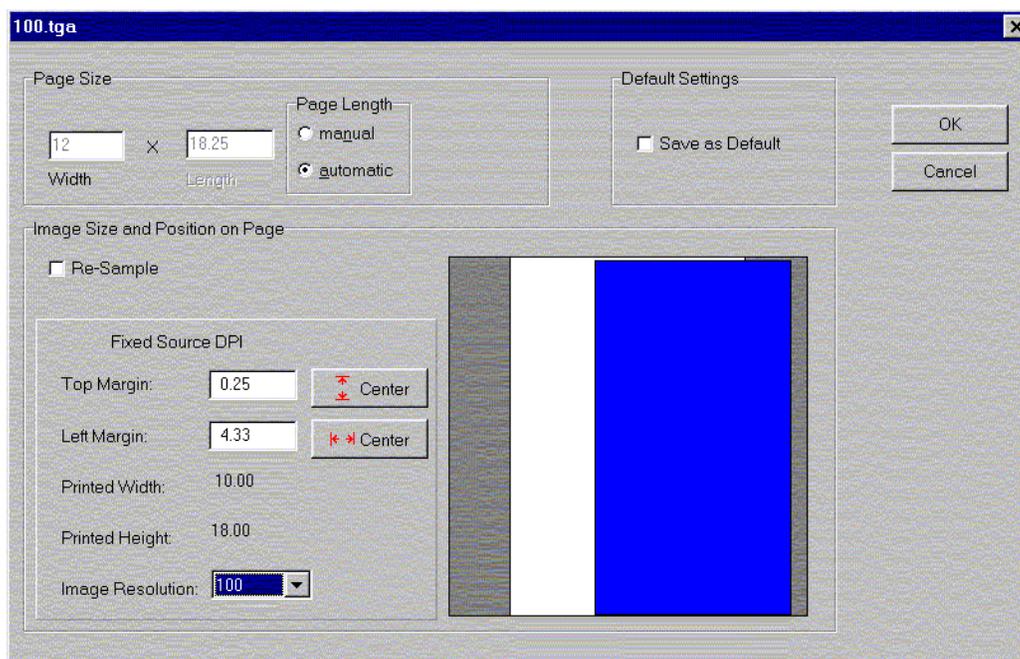

The user may type in any values within the allowed range, or use the *Center* button . When the user depresses this button, it automatically computes the left margin required for the image to be centered on the paper.

### ***Changing the Image Resolution***

Changing the **Image Resolution** changes the image size on the printed page. The Mileca printer has three native resolutions: 250 dpi, 300 dpi, and 500 dpi. Each of these printer resolutions has a number of compatible image resolutions that allow the image to be printed at larger sizes, without resampling. In the *Combo Box*, ToolPak includes the compatible image resolutions.

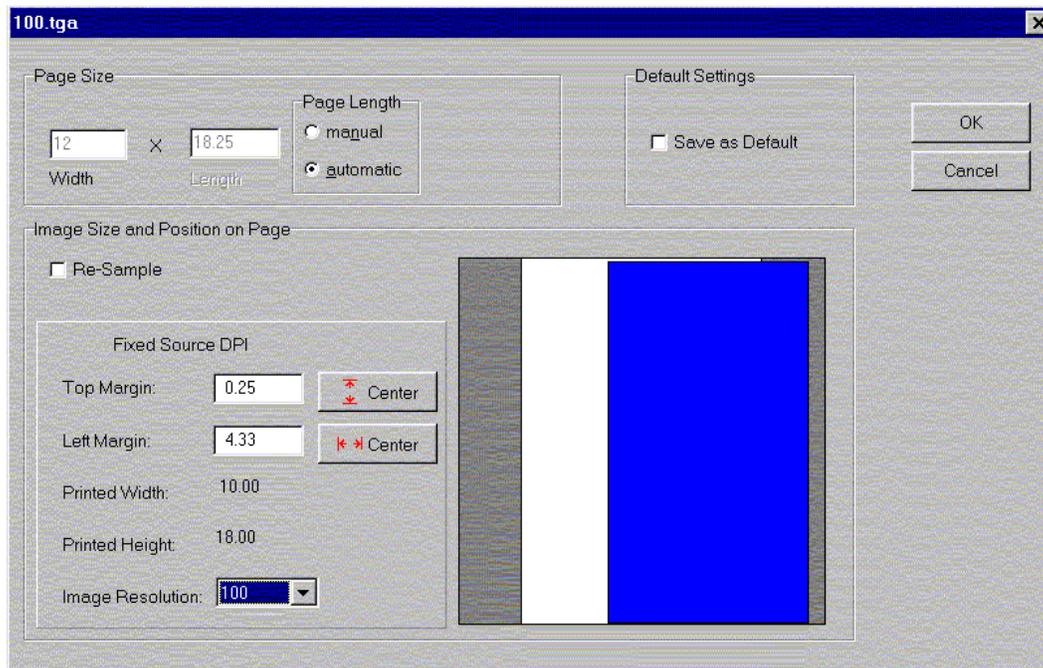

### ***To change the image resolution:***

Select one of the pre-defined values in the **Image Resolution:** Dialog box. 

**Figure 4.2:** *Image Format window*

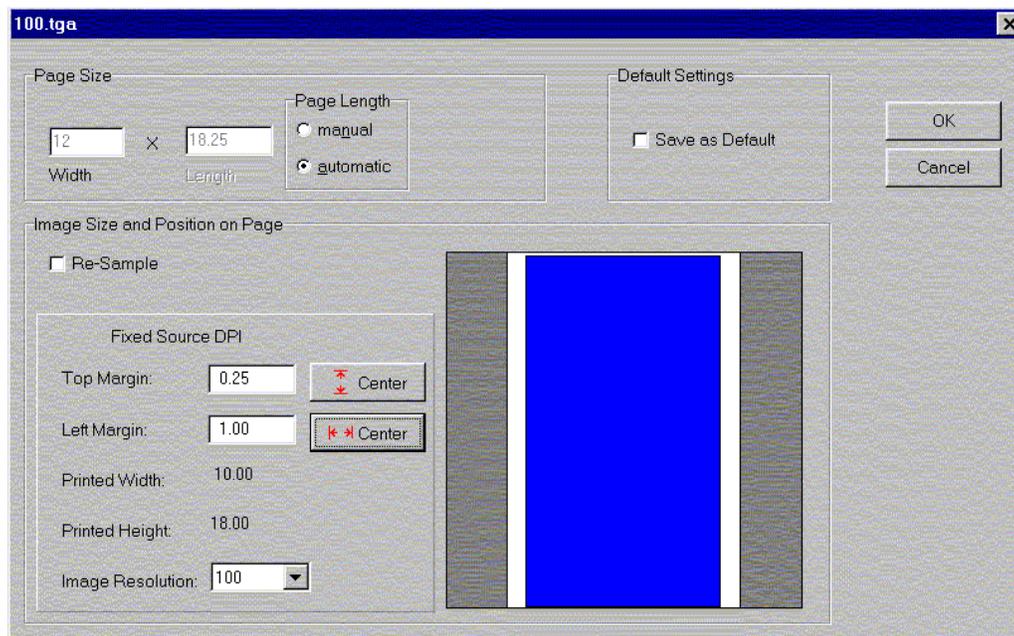

Changing the image resolution to another value shows a screen similar to the one below. Notice that by decreasing the **Image Resolution** value, the size of the image (Width and Height) increases.

**Figure 4.3:** *Image Format window*

The name at the top of the screen identifies the name of the processed file. The file name changes each time a file is processed or a series of files is processed.

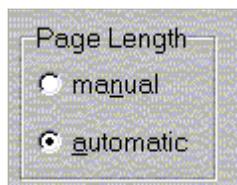

Note that the image (represented by the blue rectangle) is off the page. Pressing the  button centers all selected images sideways on the page, as shown in figure 4.4 below. Note the changes in the **Left Margin** value.

**Figure 4.4:** *Image Format window*

### *Changing the Page Length*

ToolPak provides two methods of specifying the page length: manual and automatic.

**Figure 4.5:** *Page Length Dialog Box*

When printing to a Mileca, the **automatic** mode is selected by default. The user may change the selection to **manual** mode by clicking on the appropriate radio button.

The automatic mode computes the page length as the image length plus the top margin. In the manual mode, the user enters the page length and applies it to all selected images. Those images that do not fit in the page length selected becomes flagged errors on the main screen.

### *Changing the Top Margin*

The user may change the top margin by either typing the margin value in inches or by clicking on the  button. Pressing this button centers **all** selected images on their respective pages

Typing the value of the top margin applies that value to all selected images.

### *Changing the Number of Copies*

*To change the number of copies to be printed for a selected image or group of selected images:*

1. Choose the menu option **Number of Copies**.
2. Alternatively, press the **Number of Copies**  button on the *Tool Bar*.

### *Selecting/Deselecting Color Management*

**Color Management** is selected by default. Choose the **Color Management** option or press the **Color Management**  button if a number of images are selected, some of which to undergo color management and others not.

### *Previewing an Image*

*To preview an image:*

Select the Image Preview menu option, or press the Image Preview  button.

*To resize an image:*

1. Press the mouse button when positioning the cursor on the line that separates the **Image Information** area from the **Image Preview** area.
2. The image preview will increase when moving the line to the left. See figure 4.6:

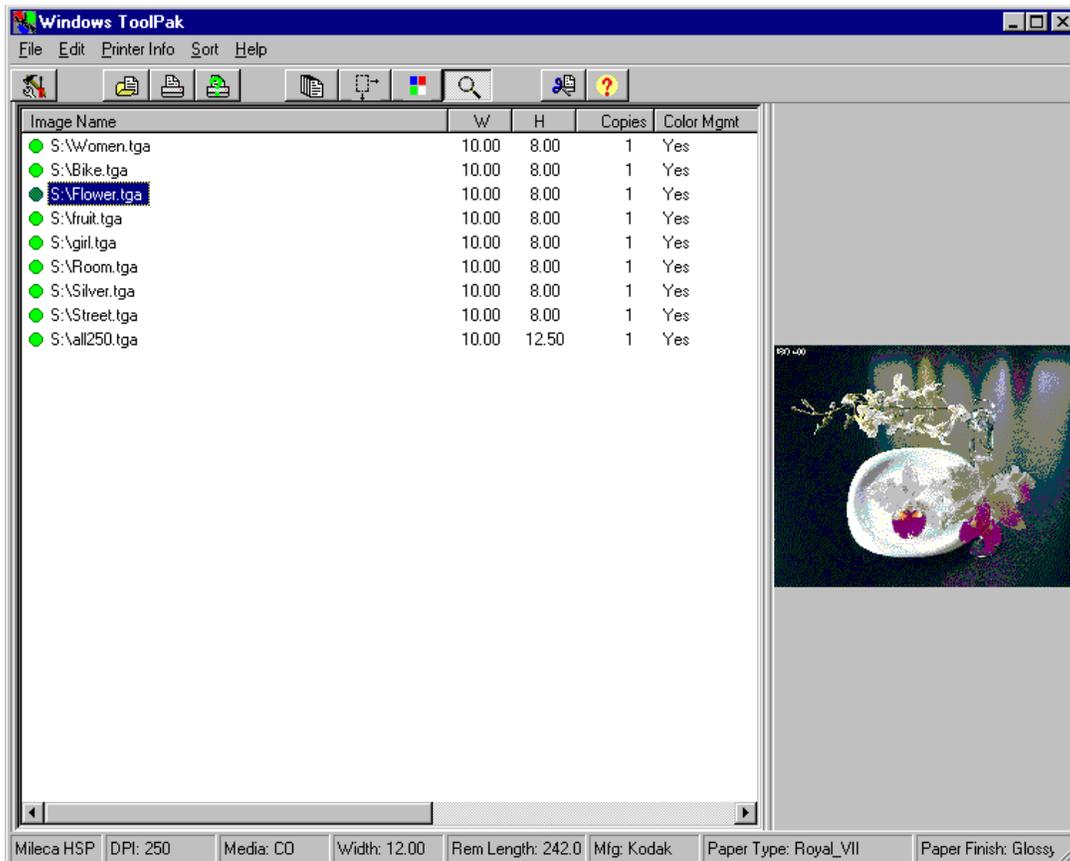

Figure 4.6: Windows ToolPak screen

Tagged Image File Format with PackBits compression and with RGB color space
Tagged Image File Format with PackBits compression and with CMYK color space
Tagged Image File Format with PackBits compression and with YcbCr color space

<b>BMP Formats</b>
Windows BMP with no compression
Windows BMP with RLE compression
OS/2 BMP version 1.x.
OS/2 BMP version 2.x.

<b>Icons and Cursors (included in the BMP Library)</b>
Windows icon file
Windows cursor file

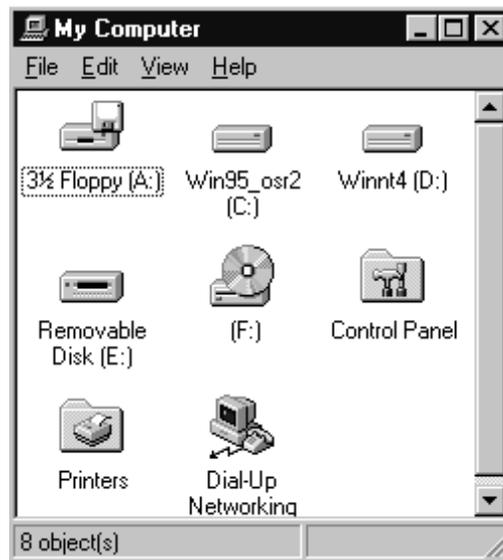

<b>Kodak Formats</b>
Kodak PhotoCD
(WIN32 only) FlashPix with no compression
(WIN32 only) FlashPix compressed with the single color method
(WIN32 only) FlashPix compressed with JPEG, using the default Q factor
(WIN32 only) FlashPix compressed with JPEG, using a specified Q factor

<b>Exif Formats</b>
Exif file containing a TIFF image with no compression and with RGB color space
Exif file containing a TIFF image with no compression and with YcbCr color space
Exif file containing a JPEG compressed image

## Appendix B: Uninstalling ToolPak

Should you need to *uninstall* **ToolPak**, use the steps below, executing them in chronological order.

1. Go to the **Desktop** on the **ToolPak** workstation.
2. Click on the **My Computer** icon on your desktop.
3. The **My Computer** window appears:

**Figure 1:** *My Computer* window

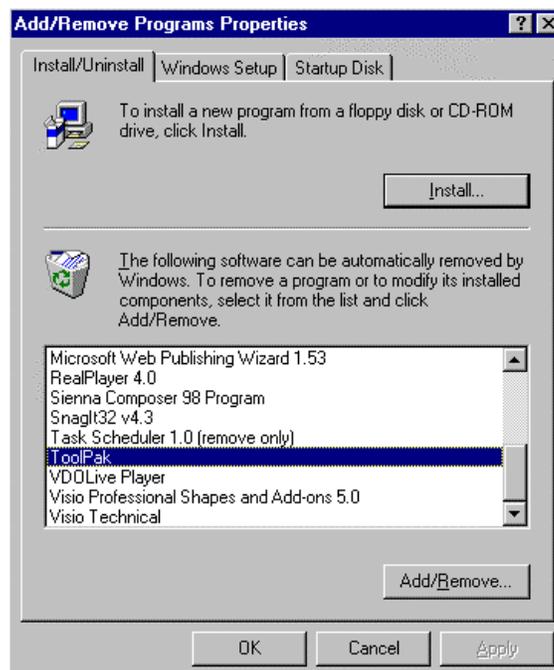

4. Click on the **Control Panel** folder. The **Control Panel** window will appear:

**Figure 2:** *Control Panel window*

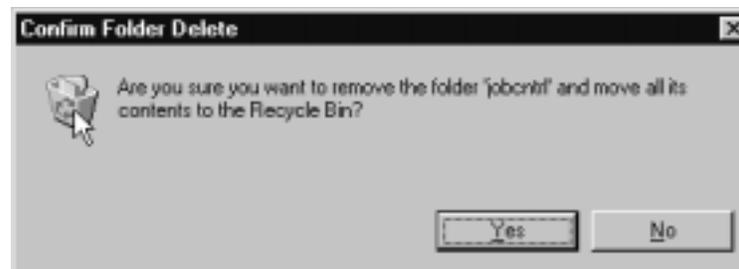

5. Click on the **Add/Remove Programs** icon.

- The **Add/Remove Programs Properties** window will appear. Click on **ToolPak** in the list box.

**Figure 3:** *Add/Remove Programs Properties window*

- Click on the **Add/Remove** button beneath the list window. The **Confirmation Folder Deletion** screen will appear:

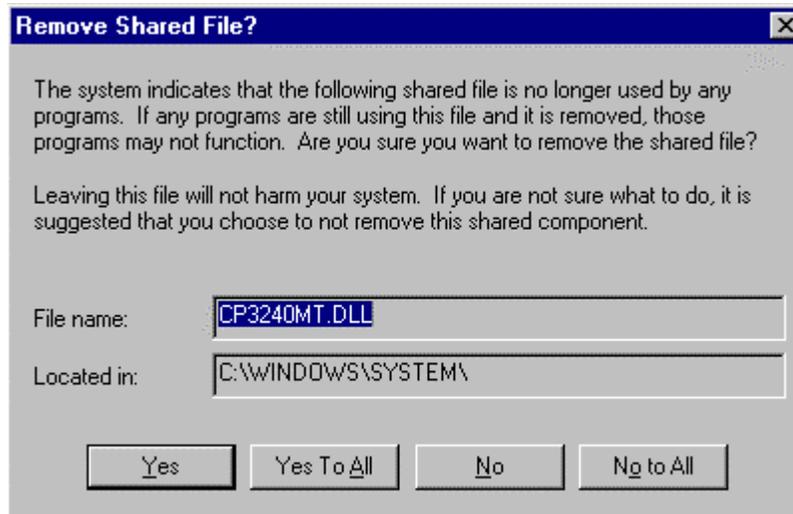

**Figure 4:** *Confirm Folder Delete screen*

- Click the **Yes** button.

9. The **Remove Shared File** dialog box will appear. Press the “No to All” button.

**Caution!** Do not remove any shared files!

**Figure 5:** *Remove Shared File* screen

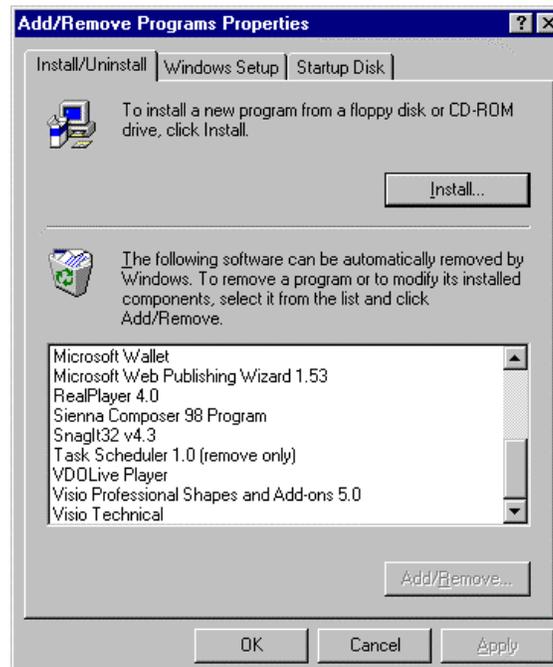

10. The **Remove Programs From Your Computer** screen will appear:

**Figure 6:** *Remove Programs From Your Computer* screen

11. Click the **OK** button.

12. The **Add/Remove Programs Properties** screen will appear again:

**Figure 8:** *Add/Remove Programs Properties screen*

ToolPak will no longer appear in the dialog box. This indicates that the programs has been uninstalled.

13. Click on the **OK** button. You will be returned to the desktop. You have now completed the ToolPak uninstall procedure.

## Appendix C:

## Glossary

<b>Term</b>	<b>Description</b>
<b>GUI</b>	Graphical User Interface
<b>HSP</b>	High-Speed Printer. This refers to the Mileca roll-to-roll printer with the Sienna designed paper transport. HSP is the internal code for this printer.
<b>Search Path</b>	A directory on the computer that is constantly monitored for print commands and/or images.
