Resetting Vehicles not Listed

This is a very important feature! There are so many airbag models in the world that it is impossible to get airbag data for all airbag models. With this function, user can perform airbag resetting for most vehicles not listed in the above table by the following simple steps. This function is applicable to vehicles use chip model **93C46, 93C56, 93C66, 24C01A, 24C04, 24C08, 25160, 25320, 95080, and nonstandard 93C46.**

1.To reset an airbag not listed in the above table, you just need to find a good airbag with same type;

2.Install the good airbag chip onto the adapter, and connect the adapter to this item;

3.Select chip type and press F1 key. This item will read and save the data of the good airbag chip automatically;

4.Take out the good airbag chip and insert the crashed airbag chip onto the adapter, and then press F2 key. This item will write the stored data into the crashed airbag chip automatically.
