About Item Matrix Add-on

Introduction

The Item Matrix add-on runs as a seamless integrated application internal in SAP Business One. The purpose of the add-on is to manage the complexity of inventory items with various features such as: colours, sizes and style. This seamless integration is needed with the Sales AR, Purchase AP and Inventory modules of SAP Business One.

Background

Currently multiple dimensions on inventory level cannot be supported in SAP Business One. It is not possible to combine different dimensions (Colour, Size, Style etc) together on the same item record in order to end up with an item matrix record. This add-on will enable the maintenance of multiple item dimensions and their usage in marketing documents.

Goals

With the new Item Matrix add-on the user can track and control inventory items by their different attributes in a fast and efficient way. The following are some of the benefits provided by this add-on.

- Full integration with SAP Business One, which enhances business process efficiency.
- Simplified stock management item cards which can be used in MRP (Consolidate Purchase Orders) and stock taking process.
- Better flexibility when selecting item attributes.
- Real time information about any attribute on the stock item card.
- Training and implementation will be easier.

Main Features

The following features are provided by the add-on:

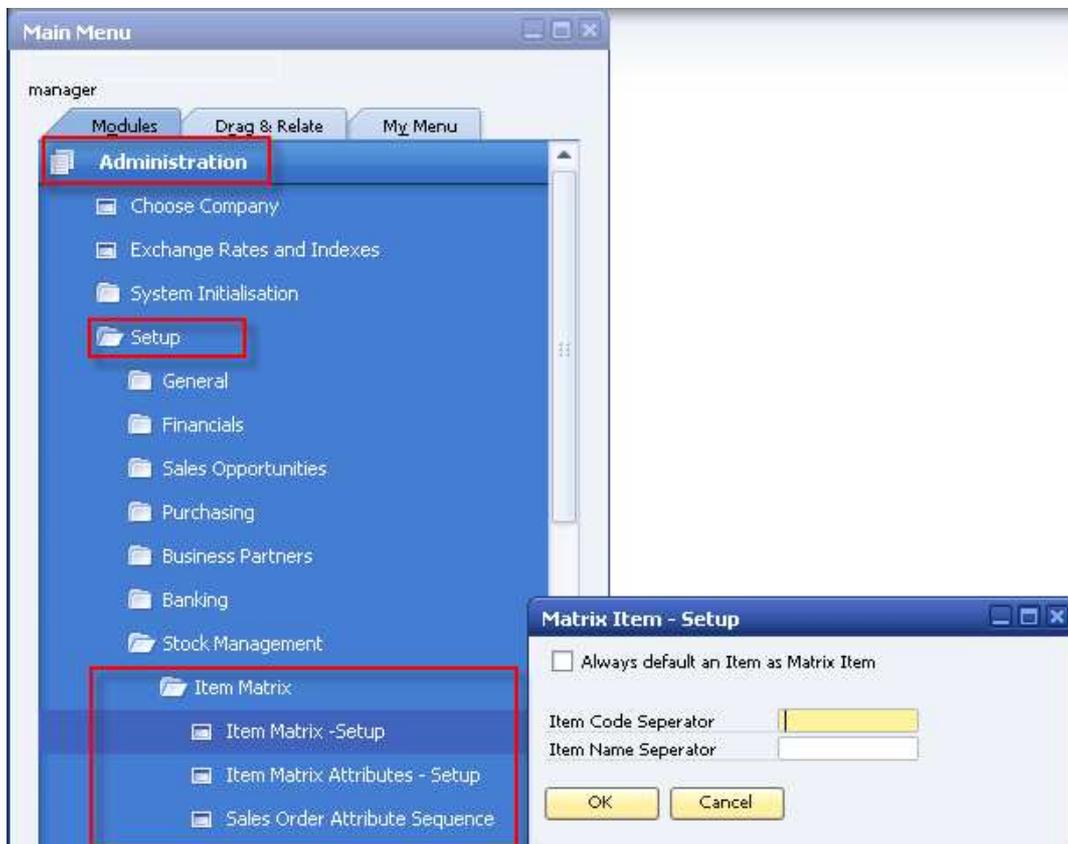

- Ability to define multiple attributes for the same item code.
- Ability to handle different dimensions for each item in all marketing documents.
- Ability to check the stock availability per warehouse per item attribute or dimension.
- Ability to maximize the efficiency of company's business process.
- Real-time and accurate stock information at a glance.
- Only one attribute can be marked as two dimensional.
- Parent Items cannot be used on any marketing documents. They will only be used as templates and links to the child items.
- The order number for the attributes is always different and the order number cannot be greater than the number of attributes.

Configuration

Before starting to use the addon, some configuration is needed.

Setup the Item Matrix

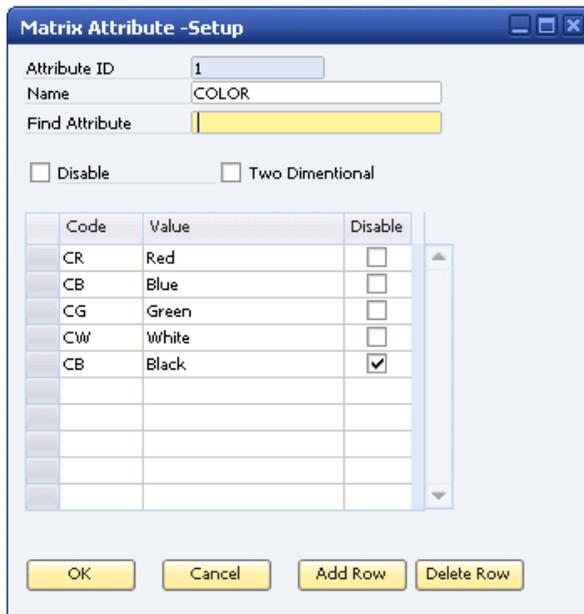

- Go to Administration → Setup → Stock Management → Item Matrix.
- Click to open the Item Matrix – Setup window.
- This is where the Key User or the Consultant will define the settings when an item will be generated.

- **Item Code Separator:** specify the separator to be used while creating the Item code (i.e 10000000-01-01)
- **Item Name Separator:** specify the separator to be used while creating the Item name (i.e Shirt-Black-Size18)
- **Always default an Item as Matrix Item:** check this option if every new item created will be defined as a matrix item.

Setup the Item Matrix Attributes

- Go to Administration → Setup → Stock Management → Item Matrix.
- Click to open the Item Matrix Attributes – Setup window.
- This is where the Key User or the Consultant will define the settings when an item will be generated.

The screenshot shows the 'Matrix Attribute -Setup' window. It contains the following fields and controls:

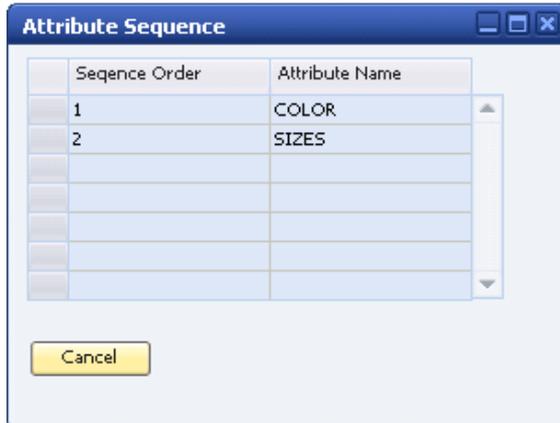

- Attribute ID: 1
- Name: COLOR
- Find Attribute: (empty)
- Disable
- Two Dimensional
- Table with columns: Code, Value, Disable
- Buttons: OK, Cancel, Add Row, Delete Row

| Code | Value | Disable |
|------|-------|-------------------------------------|
| CR | Red | <input type="checkbox"/> |
| CB | Blue | <input type="checkbox"/> |
| CG | Green | <input type="checkbox"/> |
| CW | White | <input type="checkbox"/> |
| CB | Black | <input checked="" type="checkbox"/> |
| | | |
| | | |
| | | |
| | | |

- **Attribute ID:** this is a system generated field and cannot be changed by the user. The Attribute ID starts with 1 and gets incremented by 1 for every new attribute added.
- **Name:** enter the name of the attribute. You can specify any alphanumeric string up to 150 characters.
- **Add Row:** to insert lines of codes click “Add Row” and enter the required values.
- **Delete Row:** click on the required line and click “Delete Row” to delete it.
- **Code:** enter the code for the value(s) of the attribute being setup. The code can be of maximum 5 characters.
- **Value:** enter the description for the code. E.g. if the attribute is “Color”, the values could be Red, Blue, Green etc. The values can be of maximum 25 characters.
- **Disable:** check this field if you want to disable a specific value of an attribute. While setting up the item attributes, the disabled attribute values will not be displayed.
- **Two Dimensional:** determine if the user can enter order quantity against the values of this attribute in a two dimensional grid. Only one attribute can be marked as two dimensional column and more likely will be the size.

Sales Order Attribute Sequence

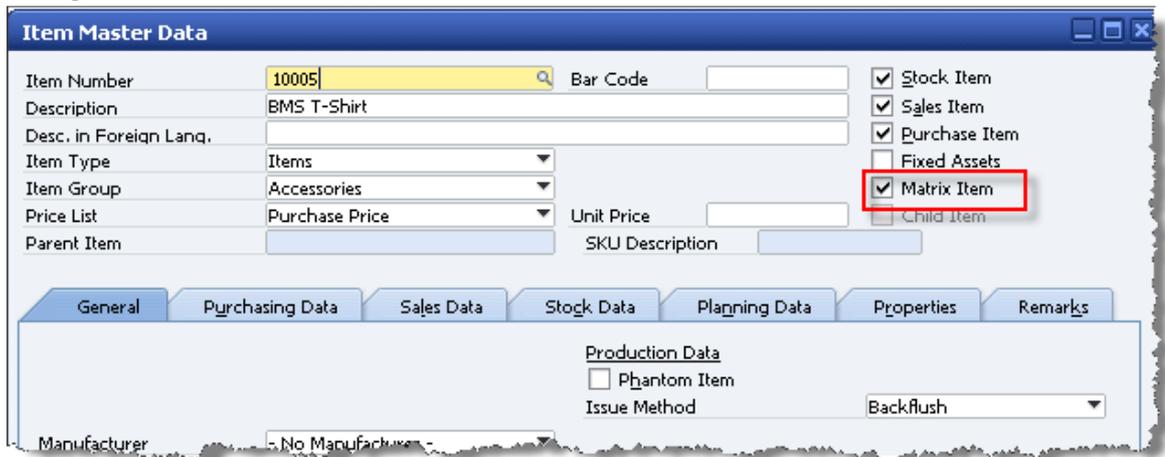

- Go to Administration → Setup → Stock Management → Item Matrix.
- Click to open the Sales Order Attribute Sequence window.
- This window displays the list of attributes created and the order in which they will be used.
- The order cannot be changed.

Creation of Matrix Items

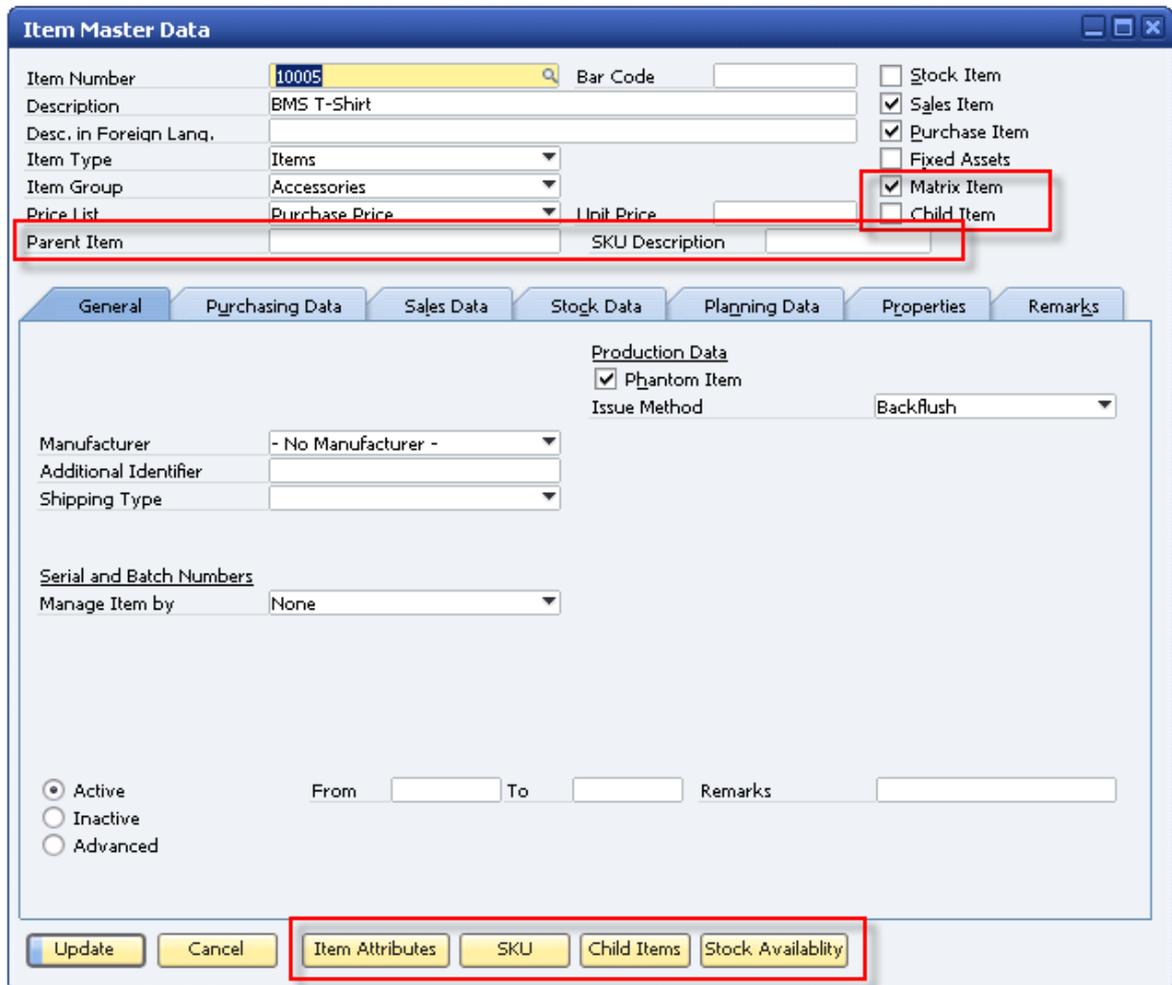

Create Matrix Items

- When you create new Items, a new flag called “Matrix Item” will be available. Whether this flag is enabled or not by default when a new item is created, depends on the configuration of the addon.

The screenshot shows the SAP 'Item Master Data' window. The 'Item Number' is 10005 and the 'Description' is 'BMS T-Shirt'. The 'Item Type' is 'Items' and the 'Item Group' is 'Accessories'. The 'Price List' is 'Purchase Price'. The 'Matrix Item' checkbox is checked and highlighted with a red box. Other checkboxes include 'Stock Item', 'Sales Item', 'Purchase Item', and 'Fixed Assets'. The 'Production Data' section shows 'Phantom Item' unchecked and 'Issue Method' set to 'Backflush'.

- Create a new Matrix Item by enabling this flag. Click “Add” to save this new item.
- As soon as this item is saved for the first time, additional fields and buttons will appear in the Item Master Data window as follows:
 - **Matrix Item:** should be checked when the item needs to be a parent item.
 - **Child Item:** updated automatically when child items are created.
 - **Parent Item:** updated with the code of the parent item when the card is referred.
 - **SKU Description:** displays the concatenated name of each child when it is created based on the separator defined in the addon configuration.
 - **Item Attributes button:** use this to select various attributes that need to be attached with current parent item.
 - **SKU button:** use this to select the SKU codes that need to be created for the selected parent item.
 - **Child Items button:** view the various child items associated with the selected parent item along with various attributes attached to the child item. Also it displays the stock availability of various child items in each warehouse.
 - **Stock Availability button:** use this to view a stock report for the parent item regarding its child items. This is enabled only when the item selected is a Parent Item.

The screenshot shows the SAP 'Item Master Data' form. The 'Item Number' field contains '10005' and the 'Description' is 'BMS T-Shirt'. The 'Item Type' is set to 'Items' and the 'Item Group' is 'Accessories'. The 'Price List' is 'Purchase Price'. The 'Parent Item' and 'SKU Description' fields are empty. In the 'Properties' section, the 'Matrix Item' checkbox is checked, and the 'Child Item' checkbox is unchecked. The 'Production Data' section has the 'Phantom Item' checkbox checked and the 'Issue Method' set to 'Backflush'. The 'Manufacturer' is '- No Manufacturer -'. The 'Serial and Batch Numbers' section has 'Manage Item by' set to 'None'. At the bottom, the 'Item Attributes' button is highlighted with a red box.

Update Cancel Item Attributes SKU Child Items Stock Availability

Define Item Attributes

Once a Matrix Item parent is created, you can proceed to create the different item attributes of the selected item. With this tool, the system allows you to perform a mass creation of the required child items.

- Click the “Item Attributes” button on the main Item Master Data window.
- The following window will appear:

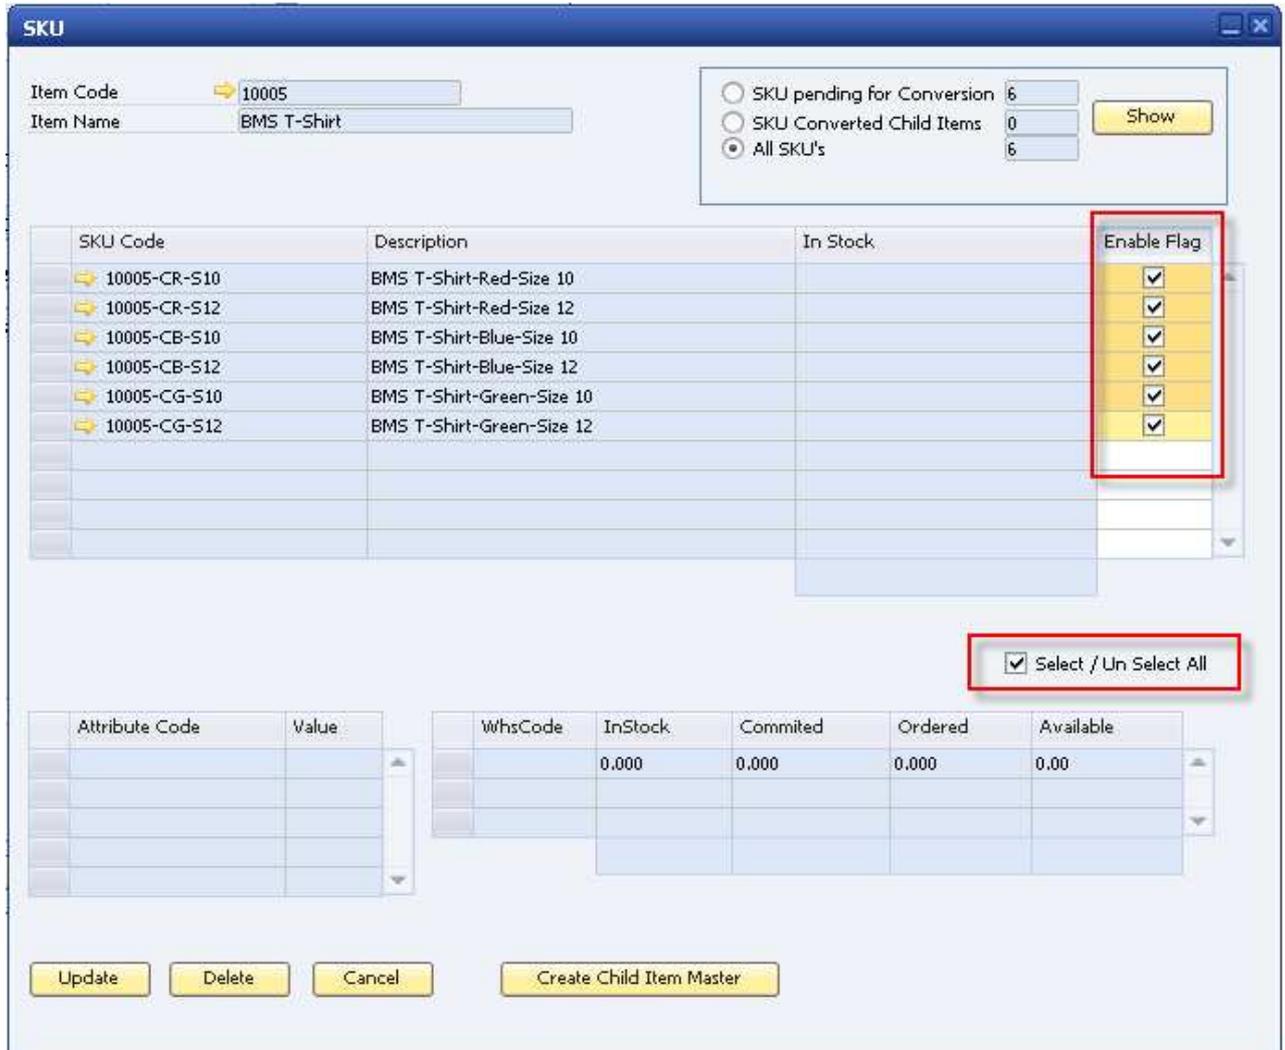

| Attribute Name | Attribute Code | Attribute Value | Create Flag |
|----------------|----------------|-----------------|-------------------------------------|
| COLOR | CR | Red | <input type="checkbox"/> |
| COLOR | CB | Blue | <input checked="" type="checkbox"/> |
| COLOR | CG | Green | <input type="checkbox"/> |
| COLOR | CW | White | <input checked="" type="checkbox"/> |
| SIZES | S8 | Size 8 | <input type="checkbox"/> |
| SIZES | S10 | Size 10 | <input checked="" type="checkbox"/> |
| SIZES | S12 | Size 12 | <input type="checkbox"/> |
| SIZES | S14 | Size 14 | <input type="checkbox"/> |

- **Item Code:** displays the item code of the selected parent item
- **Item Name:** displays the item name of the selected parent item
- **Find Attribute Name:** use in case there is a large number of Attributes to choose from
- **Find Attribute Code:** upon selection of an Attribute in the field above, this will display a filtered list of only the related codes. Select one, and the system will highlight the selected code as shown in the image above.
- **Create Flag:** click on the required check boxes to select which attributes should be considered when creating the child items for the selected parent item.
- **Update:** when finished with the flag selections, click this button to save changes. **This is required before you continue to create the SKUs.**
- **Generate SKU:** click this button to generate different SKUs for each attribute selected. The window will close when the creation is completed.

Items SKUs

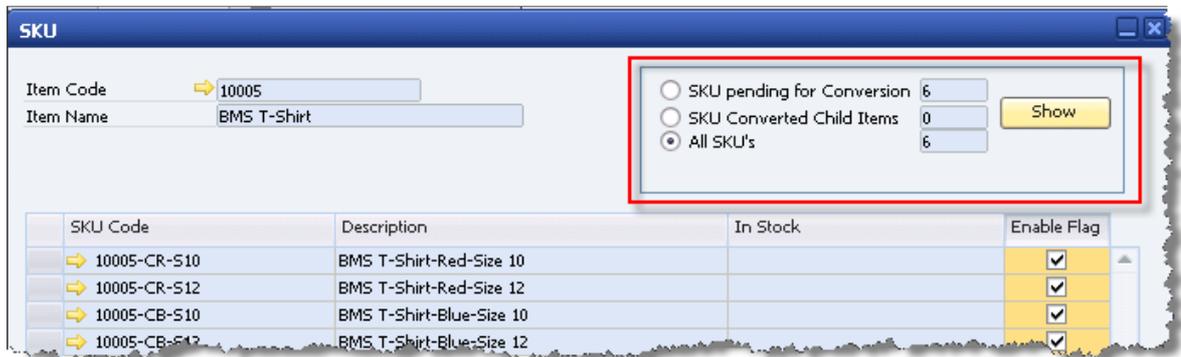

Once the SKUs are created (as per the process described above), you can proceed to view and change these SKUs.

- From the Item Master Data window, click the SKU button at the bottom of the screen.
- This will open the following window where you can view the combinations of SKU Codes created based on the attributes selected in the previous step.

| SKU Code | Description | In Stock | Enable Flag |
|--------------|---------------------------|----------|-------------------------------------|
| 10005-CR-S10 | BMS T-Shirt-Red-Size 10 | | <input checked="" type="checkbox"/> |
| 10005-CR-S12 | BMS T-Shirt-Red-Size 12 | | <input checked="" type="checkbox"/> |
| 10005-CB-S10 | BMS T-Shirt-Blue-Size 10 | | <input checked="" type="checkbox"/> |
| 10005-CB-S12 | BMS T-Shirt-Blue-Size 12 | | <input checked="" type="checkbox"/> |
| 10005-CG-S10 | BMS T-Shirt-Green-Size 10 | | <input checked="" type="checkbox"/> |
| 10005-CG-S12 | BMS T-Shirt-Green-Size 12 | | <input checked="" type="checkbox"/> |

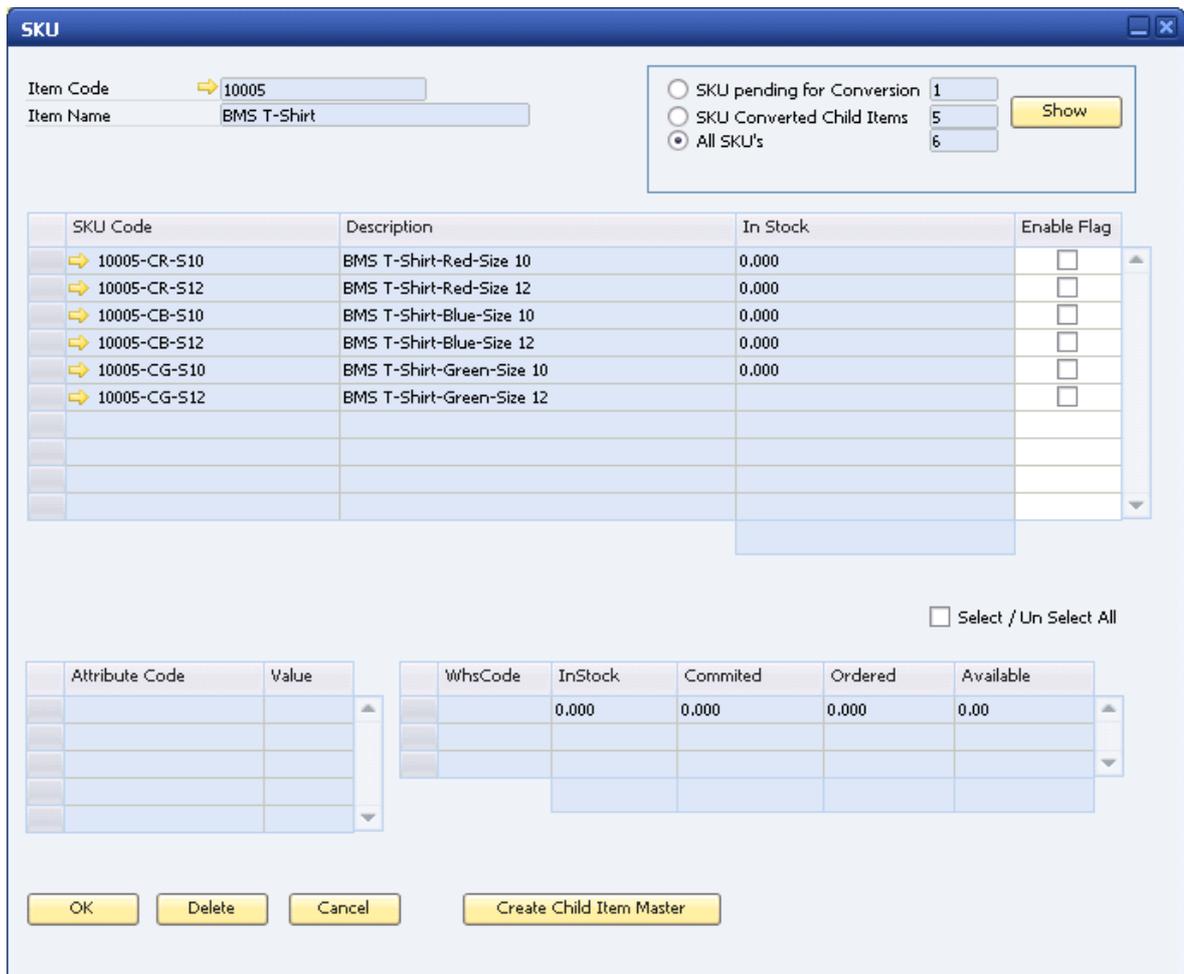

- **Enable Flag:** click to select the SKU Codes that need to be created for the parent item.
- **Select / Unselect All:** use this check box to select or unselect all SKU Codes from the list.
- **Update:** click to save changes. **This is required before you continue to create the child items.**
- **Delete:** select an SKU Code line and click Delete to delete the code
- **Cancel:** click to cancel all changes and close the screen.
- **Summary area:** the area on the top right of the screen displays the following information:

- **SKU pending for Conversion:** displays the number of SKU Codes that have NOT been created yet as Child Items
- **SKU Converted Child Items:** displays the number of SKU Codes that have already been created as Child Items.
- **All SKUs:** the sum of the two fields above
- **Show:** click on one of the buttons above and click “Show” to see the list of the related SKUs.

Define Child Items

- Once a Matrix Item parent and the SKUs are created, you can proceed to create the child items.
- From the Item Master Data window, click SKUs.
- Select which SKU Codes should be used for the creation of child items (as explained in the section above).
- Click the “Create Child Item Master” button to create new Items one for each SKU Code selected in the table above.

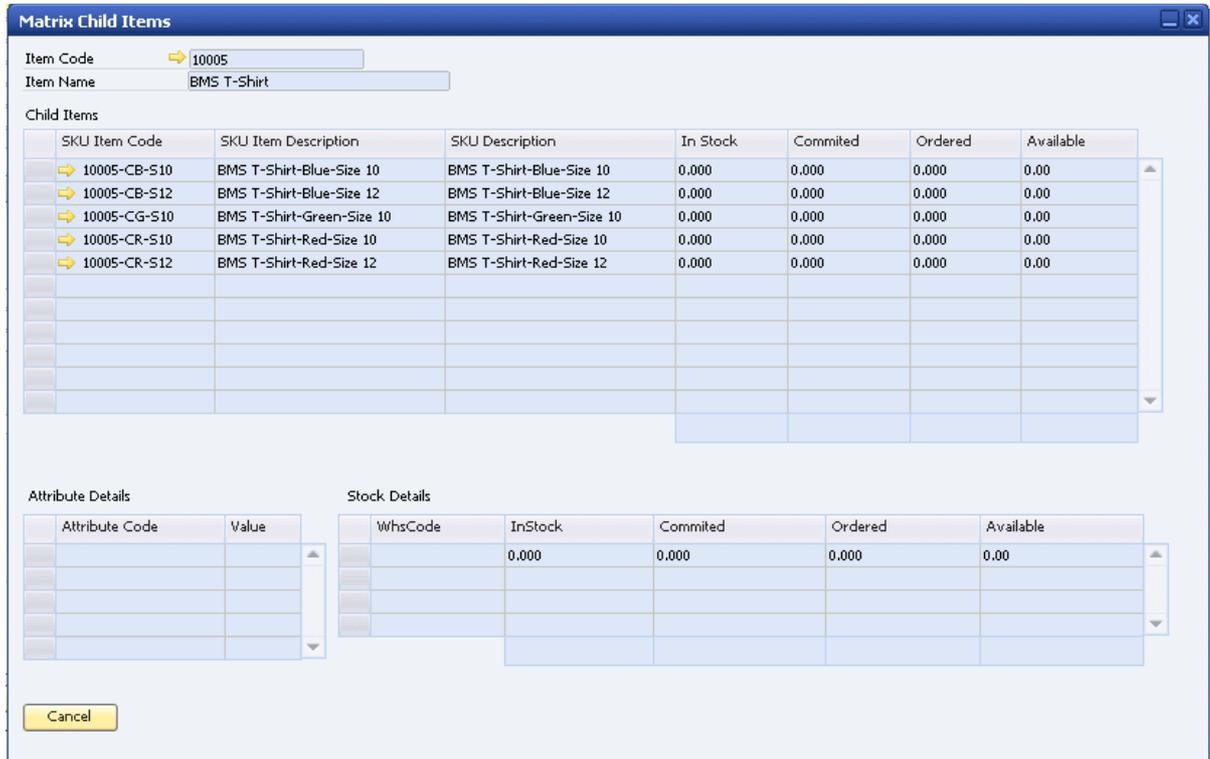

| SKU Code | Description | In Stock | Enable Flag |
|--------------|---------------------------|----------|--------------------------|
| 10005-CR-S10 | BMS T-Shirt-Red-Size 10 | 0.000 | <input type="checkbox"/> |
| 10005-CR-S12 | BMS T-Shirt-Red-Size 12 | 0.000 | <input type="checkbox"/> |
| 10005-CB-S10 | BMS T-Shirt-Blue-Size 10 | 0.000 | <input type="checkbox"/> |
| 10005-CB-S12 | BMS T-Shirt-Blue-Size 12 | 0.000 | <input type="checkbox"/> |
| 10005-CG-S10 | BMS T-Shirt-Green-Size 10 | 0.000 | <input type="checkbox"/> |
| 10005-CG-S12 | BMS T-Shirt-Green-Size 12 | 0.000 | <input type="checkbox"/> |

- The summary area on the top right will change to display the number of converted items.
- In Stock and Stock values in the table below will be update to display 0 for the new items created. In existing child items, these fields will dispaly the real stock values in the system.

View Child Items from the Item Master

- From the Item Master Data window, click the Child Items button.
- The following window will appear where the user can view the list of all child items created for the selected parent item.

Matrix Child Items

Item Code: 10005
Item Name: BMS T-Shirt

Child Items

| SKU Item Code | SKU Item Description | SKU Description | In Stock | Committed | Ordered | Available |

View Matrix Items – Child Items

View Child Items – Item Master Data window

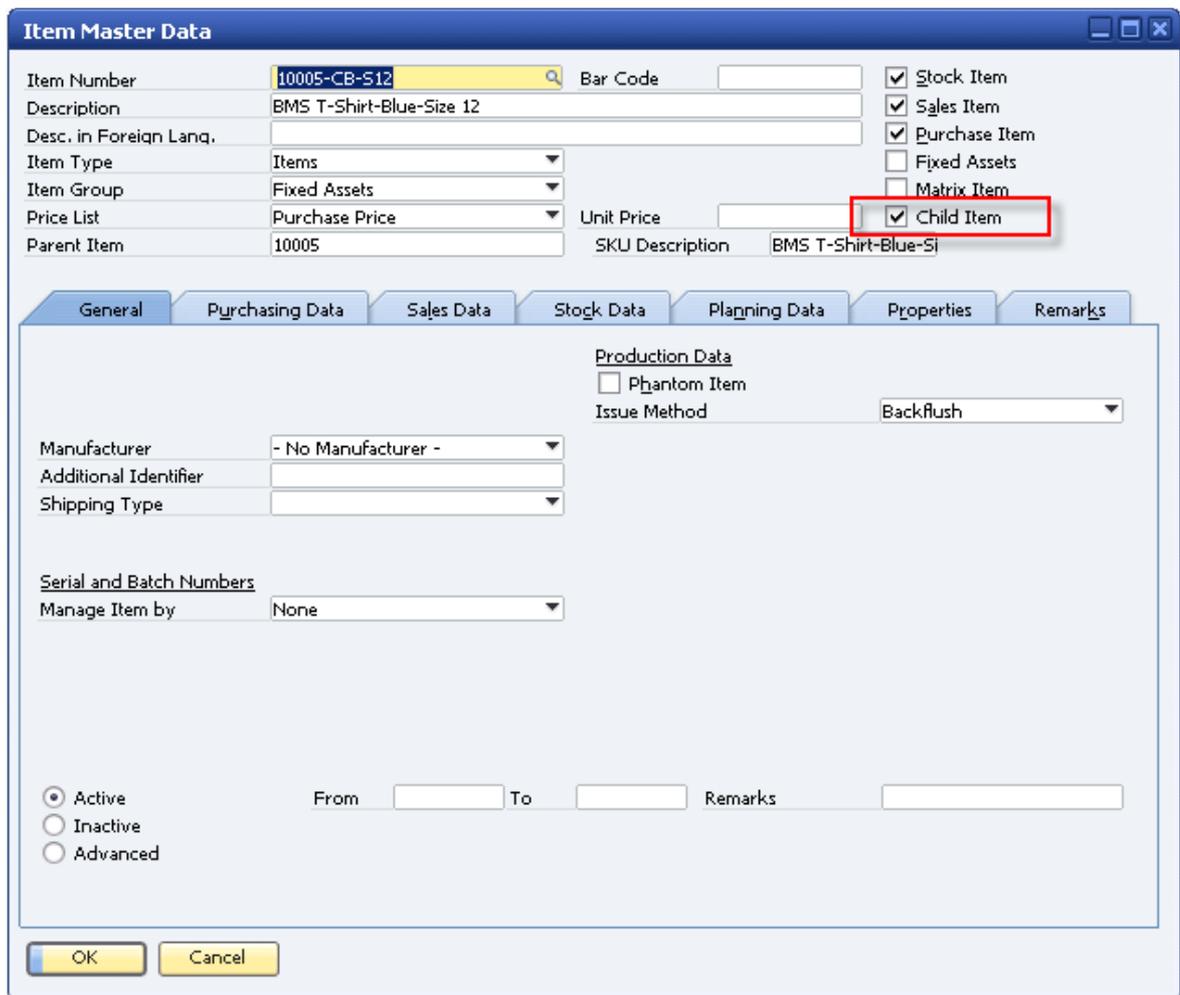

- After you have created the Child Items, you can view them in the same way that you view other Items.
- From the main menu, go to Stock Management → Item Master Data.
- Search to find a child item. The list of items now includes both the parent and all the child items created.

The screenshot shows the 'Item Master Data' window in SAP. The 'List of Items' dialog is open, displaying a table of items. The table has columns for '#', 'Item No.', 'Item Description', and 'In Stock'. The first item is highlighted in yellow.

| # | Item No. | Item Description | In Stock |
|---|--------------|---------------------------|----------|
| 1 | 10005 | BMS T-Shirt | 0.000 |
| 2 | 10005-CB-S10 | BMS T-Shirt-Blue-Size 10 | 0.000 |
| 3 | 10005-CB-S12 | BMS T-Shirt-Blue-Size 12 | 0.000 |
| 4 | 10005-CG-S10 | BMS T-Shirt-Green-Size 10 | 0.000 |
| 5 | 10005-CR-S10 | BMS T-Shirt-Red-Size 10 | 0.000 |
| 6 | 10005-CR-S12 | BMS T-Shirt-Red-Size 12 | 0.000 |

- Select to view one of the child items in the list.

The screenshot shows the 'Item Master Data' dialog box in SAP. The 'General' tab is active. The 'Item Number' is '10005-CB-S12'. The 'Description' is 'BMS T-Shirt-Blue-Size 12'. The 'Parent Item' is '10005'. The 'SKU Description' is 'BMS T-Shirt-Blue-Si'. The 'Child Item' checkbox is checked and highlighted with a red box. Other checkboxes include 'Stock Item', 'Sales Item', 'Purchase Item', 'Fixed Assets', and 'Matrix Item'. The 'Production Data' section includes 'Phantom Item' (unchecked) and 'Issue Method' (Backflush). The 'Serial and Batch Numbers' section includes 'Manage Item by' (None). The 'Active' radio button is selected. The 'From' and 'To' date fields are empty. The 'Remarks' field is empty. The 'OK' and 'Cancel' buttons are at the bottom.

- The child item is flagged on the top right corner. Note that none of the buttons previously shown are available in the child item.

Matrix Items in Documents

Selecting Matrix Items in Documents

Once an item is marked as a matrix item then the user should be able to use it in the following documents.

- Sales AR
 - Sales Order
 - Delivery
 - Return
 - A/R Invoice
 - A/R Credit Note
 - A/R Reserve Invoice
- Purchases AP
 - Purchase Order
 - Goods Receipt PO
 - Goods Return
 - A/P Invoice
 - A/P Credit Note
 - A/P Reserve Invoice
- Stock Transactions
 - Goods Receipt
 - Goods Issue
 - Stock Transfer

Note: parent items cannot be used in any of the above.

- When selecting a parent item in any document, the system displays the following window from where the user can select the child items in the quantities required.

Detailed Selection Screen

Detailed SKUs Supplier Code

| ItemCode | Attribute Name | S10 | S12 | Total |
|----------|----------------|-------|-------|-------|
| → 10005 | Blue | 0.000 | 0.000 | 0.000 |
| → 10005 | Green | 0.000 | 0.000 | 0.000 |
| → 10005 | Red | 0.000 | 0.000 | 0.000 |

Warehouse Availability Item Code 10005-CB-S12

| WhsCode | InStock | Committed | Ordered | Available |
|---------|---------|-----------|---------|-----------|
| → 1.1.1 | 0.000 | 0.000 | 0.000 | 0.00 |
| → 2.1.1 | 0.000 | 0.000 | 0.000 | 0.00 |
| → 2.1.2 | 10.000 | 0.000 | 0.000 | 10.00 |
| → 2.1.3 | 0.000 | 0.000 | 0.000 | 0.00 |
| → 2.2.1 | 0.000 | 0.000 | 0.000 | 0.00 |
| → 3.1.1 | 0.000 | 0.000 | 0.000 | 0.00 |
| | 10.000 | | | 10.00 |

Add to Document Cancel Sort

- Note that the system displays the stock values in the table below for a child item selected.
- You can check the availability of the combination by clicking on the particular row (e.g. Blue and S12 is Item Code 10005-CB-S12 and there are 10 items in stock).
- **Add to Document:** click this button to add all lines with quantity to the original document. The items with 0 or negative quantities are not copied to the document.
