SLIT TYPE RODLESS CYLINDERS $\phi 63$, $\phi 80$

Caution

Before use, be sure to read the "Safety Precautions" on p. 57.

RODLESS CYLINDERS

φ 63, φ 80

Features

- A long stroke of up to 5000mm [196.8in.] can be manufactured. It can also be used to make driving equipment, which could not be done by air cylinders in the past.
- The magnet for the sensor switch is standard equipment. By installing a sensor switch, the piston position can be easily detected, and the space for the limit switch mounting and design man-hours can be greatly reduced.
- Upside down installation mountings have been put into a series. By installing the piston yoke facing downwards, the seal band is protected, thereby increasing its durability.

Symbols

Specifications

Bore size	φ 63 [2.480in.]	φ 80 [3.150in.]
Media	Air	
Operation type	Double acting type	
Operating pressure range MPa [psi.]	0.1~0.8 [15~116]	
Proof pressure MPa [psi.]	1.2 [174]	
Operating temperature range °C [°F]	0~60 [32~140]	
Operating speed range mm/s [in./sec.]	100~1500 [3.9~59.1] ^{Note1}	
Cushion	Both sides (Variable cushion)	
Lubrication	Required ^{Note2}	
Port size	Rc3/8	Rc1/2
Maximum stroke mm	5000	
Stroke tolerance mm [in.]	1000 or less	+2 ₀ +0.079 ₀
	1001~3000	+3 ₀ +0.118 ₀
	3001~5000	+4 ₀ +0.157 ₀

Notes: 1. Consult us when the cylinder speed exceeds 1500mm/s [59.1in./sec.].
 2. However, it is not required for a cylinder speed of 500mm/s [19.7in./sec.] or less. For the recommended oil, see the recommended oil list.

Remark: For details of sensor switches, see p.1544.

Order Codes

● Since a magnet is already standard on the rodless cylinders, mounting a sensor switch will enable use in sensor switch applications.

● Order codes for sensor switch only

Without holder

With holder - ORC

★ The order code for the holder only is G5-ORC [Bore size].

● For details of sensor switches, see p.1544.

Sensor Switch Operating Range, Response Differential, and Maximum Sensing Location

- **Operating range**
 The distance the piston travels in one direction, while the switch is in the ON position. The center of the operating range is approximately the maximum sensing location.
- **Response differential**
 The distance between the point where the piston turns the switch ON and the point where the switch is turned OFF as the piston travels in the opposite direction.

● **Maximum sensing location** mm [in.]

Sensor switch model	ZG530, ZG553		CS□M	
Bore size	63 [2.480]	80 [3.150]	63 [2.480]	80 [3.150]
Operating range: <i>ℓ</i>	9.2~15.3 [0.362~0.602]	11.7~19.5 [0.461~0.768]	15~29 [0.591~1.142]	21~34 [0.827~1.339]
Response differential: C	1.0 [0.039] or less		3 [0.118]	
Maximum sensing location ^{Note}	11 [0.433]		11 [0.433]	

Note: This is the length measured from the switch's opposite end side to the lead wire.

Mounting Location of Sensor Switch

ϕ 63 [2.480in.], ϕ 80 [3.150in.]

When the sensor switch is mounted in the locations shown below (the figures in the tables are reference values), the magnet comes to the maximum sensing location of the sensor switch at the end of the stroke.

Code Piston specification Bore mm [in.]	A		C		B	D
	Standard piston	Long piston	Standard piston	Long piston		
63 [2.480]	215 [8.46]	365 [14.37]	124 [4.88]	274 [10.79]	80 [3.15]	56 [2.20]
80 [3.150]	260 [10.24]	410 [16.14]	149 [5.87]	299 [11.77]	100 [3.94]	68 [2.68]

- Loosening the sensor holder mounting screw allows the sensor switch to be moved along the switch mounting groove on the cylinder body.
- Tighten the mounting screw with a tightening torque of 0.2N·m [1.8in·lbf].

Handling Instructions and Precautions

Selection and Mounting

Allowable load and moment

Although the rodless cylinder can be used with directly applying loads, make sure that the load and moment do not exceed the values in the table below.

Pitching moment : $M_p = F_p \times r_1$ [N·m]
Rolling moment : $M_r = F_r \times r_2$ [N·m]
Yawing moment : $M_y = F_y \times r_3$ [N·m]
Maximum load capacity : W [N]

Bore size mm [in.]	Standard piston				Long piston			
	M_p N·m [ft·lbf]	M_r N·m [ft·lbf]	M_y N·m [ft·lbf]	W N [lbf.]	M_p N·m [ft·lbf]	M_r N·m [ft·lbf]	M_y N·m [ft·lbf]	W N [lbf.]
63 [2.480]	196 [144.6]	7.8 [5.8]	23.5 [17.3]	1618 [363.7]	441.3 [325.5]	15.7 [11.6]	73.6 [54.3]	1618 [363.7]
80 [3.150]	353 [260.4]	15.7 [11.6]	47.1 [34.7]	2354 [529.2]	706.1 [520.8]	31.4 [23.2]	137.3 [101.3]	2354 [529.2]

Remark: The inclined angle of the piston mount when applying the maximum moment in the rolling direction should be a total of 3 degrees or less for both swing directions.

- Cautions:**
1. The moment including the inertial force generated when the load is moved or stopped must not exceed the values in the above table. For the mass and piston speed, see the [Cushioning capacity].
 2. Rolling moment: M_r should not be applied as much as possible.

Cushioning capacity

While variable cushions are standard equipment on all rodless cylinders, keep the maximum mass and speed within the ranges shown in the graph to the right. If load and speed exceed the ranges, install an external shock absorber, etc., to absorb the shock.

Cushioning stroke mm [in.]

Bore size	Cushioning stroke
63 [2.480]	40 [1.575]
80 [3.150]	44 [1.732]

1mm/s = 0.0394in./sec.
1kg = 2.205lb

- Cautions:**
1. The maximum operating speed of the rodless cylinders is 1500mm/s [59.1in./sec.]. Consult us when exceeding this.
 2. The mass shown in the graph is the total mass carried by the rodless cylinder.
 3. Adjust cushions according to the piston speed and the mass, and absorb the impacts effectively.

Adapter

When the stroke is long and the load is large, deflection might be caused on the cylinder barrel. When support span: ℓ exceeds the value in the graph, it should be supported by installing an adapter in the middle. U-type and G-type adapters are available for $\phi 63$ [2.480in.] and $\phi 80$ [3.150in.].

Support span : ℓ mm [in.]

Bore size	Support span : ℓ	
	Standard piston	Long piston
63 [2.480]	Stroke+430 [16.93]	Stroke+730 [28.74]
80 [3.150]	Stroke+520 [20.47]	Stroke+820 [32.28]

● $\phi 63, \phi 83$

1N = 0.2248lbf.
1mm = 0.0394in.

Caution: If the support span exceeds 4000mm [157.48in.] with $\phi 63$ [2.480in.], or 5000mm [196.85in.] with $\phi 80$ [3.150in.], adapters must be installed in the middle regardless of the load.

Mounting

1. While any mounting direction is allowed, we recommend that the rodless cylinder be installed so that it faces downward when mounting in locations subject to dripping water or oil, etc., or to large amounts of dust.
2. Avoid any electric welding after mounting the rodless cylinder. Current may flow into the cylinder, generate sparks between the inner seal band, outer seal band, and cylinder barrel, and damage the seal band.

Caution: Avoid applying strong shocks to the cylinder barrel's slit portion.

Intermediate stop control

Since for structural reasons external air leakage is inevitable for the rodless cylinder, use of all port block 3-position valves, etc., for intermediate stop control could result in failure to maintain the stopping position, and the piston speed could not be controlled when restarting. We recommend, therefore, double-sided pressure control circuits that use PAB-connection 3-position valves, etc. For intermediate stopping control under constant loads, such as vertical mountings, consult us.

SLIT TYPE RODLESS CYLINDERS $\phi 63, \phi 80$

Handling Instructions and Precautions

Assembling instructions

Assembling the piston mount

T mount and LT mount for $\phi 63$ and $\phi 80$

- ① Remove O-ring for holding the scraper and the mount fixing bolt, and detach the short mount which is standard equipment.
- ② Detach the scraper on the short mount and attach it to the T mount or LT mount.
- ③ Secure the T mount or LT mount to the piston yoke with fixing bolts and install scraper holding O-ring.

M mount for $\phi 63$ and $\phi 80$

- ① Remove scraper holding O-ring and the mount fixing bolt, and detach the short mount which is standard equipment.
- ② Detach the scraper on the short mount and reattach it to the M mount.
- ③ Insert the pins into the M mount and assemble onto the piston yoke and secure it with fixing bolts, and install the scraper holding O-ring.
- ④ Align the grooves on the mount plate to the pin, and place the mount on the pin.

C mount, CT mount, CM mount,

CL mount and CLT mount for $\phi 63$ and $\phi 80$

Remove the mount fixing bolts, and install C mount to the piston yoke using C mount fixing bolts (long bolt).

Sensor switch

Handling precautions

1. The sensor switch case is a magnetic shield type, but avoid using it in places with strong external magnetic field and keep it away from strong power lines or currents.
2. Do not apply more than 98N [22lbf.] tensile force on the lead wire.
3. Avoid use in ambient chemical atmospheres.
4. Consult us regarding application in environments subject to dripping water or oil.
5. The ON time of the sensor switch shortens when the piston speed is fast and the sensor switch is installed in the middle of the stroke. Care should be taken because the relay etc. might not be able to follow.

$$\text{ON time [ms]} = (\text{operation range mm [in.]} / \text{piston speed mm/s [in./sec.]}) \times 10^3$$

Maintenance

The rodless cylinder is structurally incapable of completely preventing air leakage to the outside. Nevertheless, particles adhering to the inner seal band are the most common cause of initial-staged air leakages, and this type of failure is easily remedied.

First, loosen the outer seal band setscrews, remove the outer seal band, and apply approx. 0.1MPa [15psi.] of air pressure to the rodless cylinder. Next, insert a cleaning tool inside the cylinder barrel slit and then, while pressing down the inner seal band and moving it along the slit, use air to blow off the particles.

- Cautions:**
1. Always use protective glasses.
 2. When performing maintenance, use the special cleaning tool. Use of a screwdriver or other tool could damage the inner seal band or cylinder barrel.
 3. If the above maintenance fails to stop the air leakage, follow instructions in the user's manual to perform a cylinder overhaul.

General precautions

Piping

Always thoroughly blow off (use compressed air) the tubing before connecting it to the rodless cylinder. Entering chips, sealing tape, rust, etc., generated during piping work could result in air leaks or other defective operation.

Atmosphere

1. If using in locations subject to dripping water, dripping oil, etc., or to large amounts of dust, the band may break or the life of the seals could be shortened. Use a cover to protect the unit or install with the mount facing downward.
2. Do not engage in electric welding close to the rodless cylinder. The welding spatters could damage the outer seal band.
3. The product cannot be used when the media or ambient atmosphere contains any of the substances listed below.
 Organic solvents, phosphate ester type hydraulic oil, sulphur dioxide, chlorine gas, or acids, etc.

Lubrication

Though it is possible to use without lubricating oil when the cylinder speed is 500mm/s [19.7in./sec.] or less, it is recommended to use the following lubricating oils when using at a speed of 500mm/s [19.7in./sec.] or more.

Recommended oils

Idemitsu Kosan Co., Ltd. : Daphne Rockdrill 46

Showa Shell Sekiyu K.K. : Rock drill oil 32

Mobil Sekiyu K.K. : Almo 525

Others: Products equivalent to the above

Media

1. Use air for the media. For the use of any other media, consult us.
2. Air used for the rodless cylinder should be clean air that contains no deteriorated compressor oil, etc. Install an air filter (filtration of a minimum 40 μm) near the rodless cylinder or valve to remove collected liquid or dust. In addition, drain the air filter periodically.
