1.0 Introduction

The Centers for Medicare & Medicaid Services (CMS) has published ASC Measures 9 and 10 for Ambulatory Surgery Centers (ASC) and facilities must start collecting data starting 04/01/2014:

- Quality Measure 9. Endoscopy/Polyp Surveillance: Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patients
- Quality Measure 10. Endoscopy/Polyp Surveillance: Colonoscopy Interval for patient with a History of Adenomatous Polyps- Avoidance of Inappropriate Use

Quality Measure 9: The American Cancer Society's current guidelines recommend colonoscopy screening at 10-year intervals for the average risk population. CMS is proposing to adopt the Endoscopy/Polyp Surveillance: Appropriate followup interval for normal colonoscopy in average risk patients measure, which assesses the percentage of patients aged 50 years and older receiving screening colonoscopy without biopsy or polypectomy who had a recommended follow-up interval of at least 10 years for repeat colonoscopy documented in their colonoscopy report.

The numerator for this measure is the number of patients who had a recommended follow-up interval of at least 10 years for repeat colonoscopy documented in their colonoscopy report. The denominator for this measure is the total number of patients aged 50 years and older receiving screening colonoscopy without biopsy or polypectomy. The measure excludes patients whose medical records contain reason(s) for recommending a follow up interval of less than 10 years.

Quality Measure 10: The frequency of colonoscopy screening varies depending on the size and amount of polyps found; however, the general recommendation is a 3-year follow up. CMS is adopting the Endoscopy/Polyp Surveillance: Colonoscopy Interval for Patients with a History of Adenomatous Polyps - Avoidance of Inappropriate Use measure, which assesses the percentage of patients aged 18 and older receiving a surveillance colonoscopy, with a history of prior colonic polyps in previous colonoscopy findings who had a follow-up interval of 3 or more years since their last colonoscopy documented in the colonoscopy report.

The numerator is patients who had an interval of three or more years since their last colonoscopy. The denominator is all patients aged 18 years or older receiving a surveillance colonoscopy, with a history of prior colonic polyp(s) in previous colonoscopy findings.

The CMS ASC Measures 9 and 10 will be captured in existing AdvantX functionality via the Case History and User Tables Modules and are necessary for specific typing and grouping of the quality measures. Quality Data Codes do not apply to these new questions; the questions are based on clinical information and will not be referenced on a claim.

1.1 Purpose

The purpose of this document is to guide ACSs through using the AdvantX Quality Measures feature to gather the required Endoscopy/Poly Surveillance data.

1.2 Audience

This white paper is designed for AdvantX users. It assumes that users are familiar with the AdvantX application, CMS Quality Measures, and with the facility-based quality improvement program. It also assumes that users are familiar with a personal computer, mouse, and Windows operating system. If you are unfamiliar with any of these tools, please take the time to reference other material to supplement your knowledge or contact your Facility Administrator, Director of Nursing, PC Support Technician, and/or SourceMedical Client Services.

1.3 Related Documents

The scope of this document is limited to the functionality of the Quality Measures feature in the AdvantX application. Please refer to the following documentation or websites for assistance with issues outside the scope of this document.

2.0 Adding the CMS ASC Measure 9 to the User Tables

Before you can efficiently utilize the AdvantX application Quality Measures feature for collecting CMS ASC Measure 9 data, there are some tasks that must be performed. These tasks are performed in the User Tables Module and must be performed in the following order:

- Create the Quality Measure Type
- Create the Quality Measure Group .
- Create the Quality Measure

2.1 Quality Measure Type User Table

- 1. Login to the AdvantX application.
- 2. On the AdvantX Toolbar, click the User Tables User Tables icon. The system displays the User Tables module main menu.

-

- Navigate to the **Module** look up menu, and then select **Case History**. The system copies all of the user tables 3. associated with the Case History Module to the User Tables look up menu.
- Navigate to the User Tables look up menu, and then select the Quality Measure Type user table. The system 4. shows the following window:

User Tables				×
	User Tables: Quality Measure Type			
	Search: AHA,AHA			
Module:	Description	Quick Code	Active	New
		AHA		нон
Case History		AHA1		1
	CMS	CMS		Open
	CMS1	CMS1		
	QM1	QM1	বব	Delete
				Output Help
	ОК	Cancel		

Figure 1: Quality Measure Type User Table

©2014 Source Medical Solutions, Inc. All Rights Reserved. This document contains unpublished, confidential and proprietary information of SourceMedical. Any unauthorized use, reproduction or transfer of this document without the expressed written consent of SourceMedical is strictly prohibited.

5. On the right **Navigational Bar**, click the **New** button. The system displays the **Quality Measures Type: New** window:

escription:	Active: 🔽	ОК
iick Code: 108	Reportable: 🗖	Cancel
		File
		Reset
		User Tables
		Help

Figure 2: Quality Measure Type User Table – New Entry

- 6. Enter ASC 9 Endo/Polyp Surveillance in the Description box.
- 7. Select the Active check box. Must be activated to select a Quality Measure Type in the Case History module
- 8. Accept the default **Quick Code** or change the code to a value that best describes the Quality Measure Type.
- 9. Select the Reportable check box, if applicable.
- 10. After specifying the required data, the New Quality Measure Type window will look similar:

ality Measure Type: New		
Description: ASC 9 Endo/Polyp Surveillance Quick Code: ASC 9	Active: 🔽 Reportable: 🔽	OK Cancel File Reset User Tables Help

Figure 3: Quality Measure Type User Table – ASC 9 Endo/Polyps Surveillance – Completed Entry

Note:

Selecting **Reportable** implies that the Quality Measure will be reported to the designated regulatory agency.

11. Click the OK button to save the ASC 9 Endo/Polyp Surveillance Quality Measure Type and to exit the Quality Measure Type User Table.

2.2 Quality Measure Group User Table

- On the AdvantX Toolbar, click the User Tables Liser Tables icon. The system displays the AdvantX User Tables module 1. main menu.
- Navigate to the **Module** look up menu, and then select **Case History**. The system copies all of the user tables 2. associated with the Case History module to the User Tables look up menu.
- Navigate to the User Tables look up menu, and then select the Quality Measure Group user table. The system 3. will show the Quality Measure Group list box:

©2014 Source Medical Solutions, Inc. All Rights Reserved. This document contains unpublished, confidential and proprietary information of SourceMedical. Any unauthorized use, reproduction or transfer of this document without the expressed written consent of SourceMedical is strictly prohibited.

- 5. Enter each of the following questions (one at a time) in the **Description** box.
 - Patient had a screening colonoscopy, without biopsy or polypectomy, and is 50 years or older on date of encounter.
 - Documentation of medical reason(s) for not recommending at least a 10 year follow-up interval, e.g., above average risk patient or inadequate prep.
 - Recommended follow-up interval of at least 10 years for repeat colonoscopy report
- 6. For each Question entered, accept the Quick Code or change the code to a value that best describes the Quality Measure.
- 7. Select the **Active** check box. Must be activated to answer the question in the Case History module.
- From the Quality Measure Type look up menu, select ASC-9 Endo/Polyp Surveillance for all three questions. 8.
- 9. Select the **Response Mandatory** check box for all three questions, if applicable.

Selecting **Response Mandatory** requires users to respond to the questions when completing the Quality Measure Response form in the Case History Module.

FMQAI, who is the Support Contractor for the Ambulatory Surgical Center Quality Reporting program, has issued reporting tools to help in the data collection of whether or not colonoscopy patients fall into the above measures. A copy of the template is attached in references and the questions used below were obtained from this template. (http://www.ogrsupport.com/asc/tools).

- 10. From the Quality Measure Group look up menu, select ASC 9 Endo/Polyp Surveillance for all three questions.
- 11. After completing the entry of the Quality Measure guestion, the window should look similar to the below window:

4.0 Navigating Quality Measures in the Case History Module

The Questions in the dialog menu are the Quality Measures specified in the Quality Measures user table. The Quality Measures are grouped by Quality Measure Type and Quality Measure Group. Because the questions are in bold font, you must respond and provide comments, if applicable. It is important to note that the questions are not available with an order placement in the Quality Measures Response window. They will appear in the entry order that they are added to the user table. Once a new entry is added to the Quality Measure User Table, the placement order of that question cannot be changed.

After creating the Quality Measure Type, Quality Measure Group, Quality Measure user tables, you are then ready to start your Quality Measures monitoring. This task may be performed during preparation for surgery, during surgery or post surgical procedure while the patient is in the facility. AdvantX offers a Quality Measures Response form to capture quality measure data.

On the AdvantX Toolbar, click the Case Hist icon. The system displays the Case History module Case tab: 1.

5.0 Quality Measures Analysis Report

Important/	

Known Issue: This report will not currently calculate the percentage correctly. When running the report it takes into account all cases run for the date range and since we are running Quality Measures only for Endo accounts, the percentage shown on the report is not accurate.

The Quality Measures Analysis Report will be used to capture and track Endoscopy/Polyp Surveillance data. Below are steps on how to generate the Quality Measures Analysis Report.

1. On the AdvantX **Toolbar**, click the **Reports** icon. The system displays the Reports window:

Date from: 00/00/00	TE	hruc (00/00/00) D	ale type: Transaction date C Post date	
- OR - Period from:	<u> </u>	heur 🗌		
🔲 Group by facil	ity			
Facility: Alt 🗐	0			
Name	0			

Figure 25: AdvantX Report Module Window

- 2. From the **Module** look up menu, select **Case History**. All reports associated with the Case History module are copied to the **Reports** look up menu.
- 3. Navigate to the **Reports** look up menu, and then select **Quality Measures Analysis Report**. The system displays the following window:

Date of service from: 03	/25/14	Thru: 03/25/14

- Notes: The value [0] located to the right of the All option check menu indicates that criteria has not been selected. If no specific filter criteria are specified, the report will display all items available for that filter.
 - If the All option is selected, the Value [0] will change to the value of the available filters, and all available items will be displayed on the report.
 - If the user selects one or more providers, visit type, quality measures, quality measures type, and quality measures group, the value [0] will change to that number. For example: If you select 3 specific providers included in the Provider filter, the value [0] will change to the value [3], and the report will be limited to data specific to those providers.
- 4. Enter the From and Thru Date of Service (date format is xx/xx/xx).
- 5. From the Group By look up menu, select Quality Measures Type.
- 6. On the Case Status component, select the All option.
- 7. On the **Response** component, select the **All** option.
- 8. Select the Include check box, if applicable.

.

- 9. On the **Format** component, select the Summary option.
- 10. From the Surgeon list box, select a Surgeon or Surgeons.
- 11. From the Visit Type list box, select a Visit Type or Visit Types.
- 12. From the Quality Measures list box, select a Quality Measure or Measures.
- 13. From the Quality Measures Type list box, select a Quality Measure Type or Quality Measure Types.
- 14. From the Quality Measures Group list box, select a Quality Measure Group or Quality Measure Groups.

Below is a Quality Measures Analysis Report summary filter window ready to be sent to the output window and printer:

Figure 27: Quality Measures Analysis Report – Summary Format with Selected Filters

^{©2014} Source Medical Solutions, Inc. All Rights Reserved. This document contains unpublished, confidential and proprietary information of SourceMedical. Any unauthorized use, reproduction or transfer of this document without the expressed written consent of SourceMedical is strictly prohibited.

- Case History is the selected reports module. a.
- Quality Measures Analysis is the selected report. b.
- The Date of Service From value is 01/01/14. С.
- d The Date of Service Thru value is 03/15/14.
- The report will be grouped by Quality Measures Type. e.
- All cases were selected for Case Type, i.e., Pending, Performed, Cancelled or All. f.
- The report will include All responses. q.
- The report will not include response comments. h.
- The report will only display a summary report Figure 28 of the quality measures. Select the Detail check box if i you want to print a detailed report for the quality measure(s). Figure 30 displays a detailed quality measures analysis report.
- The report will include all surgeons [26]. j.
- k. The Visit Type will include all Visit Types [9].
- The report will include Quality Measure Types ASC 9 Endo/Polyp Surveillance and ASC 10 Patient with History L [2].
- m. The report will include Quality Measure Groups ASC 9 Endo/Polyp Surveillance and ASC 10 Patient with History [2]. If no specific filter criteria are specified, the report will display all items available for that filter.
- n. The report will include a few Quality Measures [7].

If the report is based on "Response:"

- a. AdvantX will count the total number of cases based on the selection for the date range selected with "Yes" to "Response:"
 - Count will be reported as total number. .
 - Response count will be reported as a percentage of all cases.
- b. AdvantX will count total number of cases based on "Case Status" selection for the date range selected with "No" to "Response:"
 - Count will be reported as total number. .
 - Response count will be reported as a percentage of all cases.
- C. AdvantX will count the total number of cases based on "Case Status" selection for the date range selected with "Blank" to "Response:"
 - Count will be reported as total number. .
 - Response count will be reported as a percentage of all cases.
- Response percent (%) is displayed on the report: d.
 - The percentage is equal the number of responses divided by the total number of cases for the selected timeframe.
 - AdvantX is currently designed to calculate percentage on total cases. Calculations based on a subset of total cases may be manually calculated by the user. For example, one of the categories, Quality Measure 9: Endoscopy/Polyp Surveillance: Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patients. To calculate the percentage of patients who had "Recommended follow-up interval of at least 10 years for repeat colonoscopy report," the total number of patients who had "Recommended follow-up interval of at least 10 years for repeat colonoscopy report" would be the numerator and the Total number of patients in the category of "Quality Measure 9: Endoscopy/Polyp Surveillance: Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patients" would be the denominator.
- 15. Click **OK** to initiate the report. The system will kick off the generation of the report based on the established filters and will display a similar Print Preview window when the data is ready to be sent to the printer:
