Document Title	GV55 User Manual
Version	1.02
Date	2012-11-16
Status	Release
Document Control ID	TRACGV55UM001

General Notes

Queclink offers this information as a service to its customers, to support application and engineering efforts that use the products designed by Queclink. The information provided is based upon requirements specifically provided to Queclink by the customers. Queclink has not undertaken any independent search for additional relevant information, including any information that may be in the customer's possession. Furthermore, system validation of this product designed by Queclink within a larger electronic system remains the responsibility of the customer or the customer's system integrator. All specifications supplied herein are subject to change.

1 Introduction

The GV55 is a powerful GPS locator designed for vehicle or asset tracking. It has superior receiver sensitivity, fast TTFF (Time to First Fix) and supports Dual-Band GSM frequencies 850/900/1800/1900, its location can be monitored in real time or be periodically tracked by a backend server or other specified terminals. The GV55 has multiple input/output interfaces that can be used for monitoring or controlling external devices. Based on the integrated @Track protocol, the GV55 can communicate with a backend server through the GPRS/GSM network to transfer reports of Emergency, geo-fence boundary crossings, low backup battery or scheduled GPS position as well as many other useful functions. Users can also use GV55 to monitor the status of a vehicle and control the vehicle by its external relay output. System Integrators can easily setup their tracking systems based on the full-featured @Track protocol.

1.1. **Reference**

Table 1. GV55 Protocol Reference

SN	Document name	Remark
[1]	GV55 @Track Air Interface Protocol	The air protocol interface between GV55 and backend server.

1.2. **Terms and Abbreviations**

Table 2. Terms and Abbreviations

Abbreviation	Description
AGND	Analog Ground
AIN	Analog Input
DIN	Digital Input
DOUT	Digital Output
GND	Ground
MIC	Microphone
RXD	Receive Data
TXD	Transmit Data
SPKN	Speaker Negative
SPKP	Speaker Positive

2 Product Overview

2.1. **Check Part List**

Before starting, check all the following items have been included with your GV55. If anything is missing, please contact your supplier.

Figure 1.   Appearance of GV55

2.2. **Parts List**

Table 3. Part List

Name	Picture
GV55 Locator	63mm*50mm*21.8mm
User Cable	
DATA_CABLE_M (Optional)	

2.3. **Interface Definition**

The GV55 has a 6 PIN interface connector. It contains the connections for power, I/O. The sequence and definition of the 6PIN connector are shown in following figure:

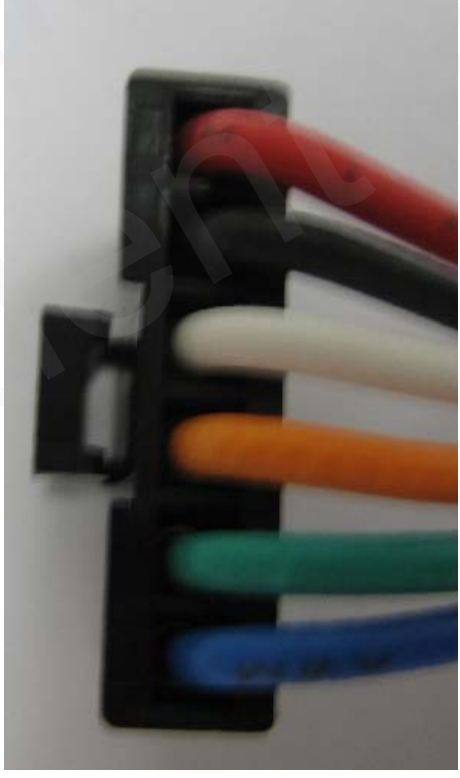

Figure 2.   The 6 PIN connector on the GV55

Table 4. Description of 6 PIN Connections

Index	Description	Comment
1	VIN	External DC power input, 8-32V
2	GND	GND
3	IGN	Ignition input, positive trigger
4	IN1	Digital input, negative trigger
5	OUT2	Open drain, 150mA max
6	OUT1	Open drain, 150mA max ,with latch circuit

2.4. **GV55 User Cable Colour**

Table 5. GV55 User Cable Colour definition

Definition	Color	PIN No	Cable
VIN	Red	1	
GND	Black	2	
IGN	White	3	
IN1	Orange	4	
OUT2	Green	5	
OUT1	Blue	6	

3 .Getting Started

3.1. **Opening the Case**

Figure 3.   Opening the Case

Insert the triangular-pry-opener into the gap of the case as shown below, push the opener up until the case unsnapped.

3.2. **Closing the Case**

Figure 4.   Closing the Case

Place the cover on the bottom in the position as shown in the following figure. Slide the cover against the direction of the arrow until it snapped.

3.3. **Installing a SIM Card**

Open the case and ensure the unit is not powered (unplug the 6Pin cable and switch the internal battery to off position). Slide the holder right to open the SIM card. Insert the SIM card into the holder as shown below with the gold-colored contact area facing down taking care to align the cut mark. Close the SIM card holder. Close the case.

Figure 5.   SIM Card Installation

3.4. **Installing the Internal Backup Battery**

Figure 6.   Backup Battery Installation

There is an internal backup Li-ion battery,

3.5. **Switch ON the Backup Battery**

To use the GV55 backup battery, the switch must be at the ON position. Switch on the case and ON/OFF position are shown below.

Figure 7.   Switch and ON/OFF position

Note:

1-The switch must be on the "OFF" position when shipped on an aircraft.

2-When the switch is on the "OFF" position; the battery cannot be charged or discharged.

3-To reset the device: Remove the external DC power and second switch off the backup battery. And then supply the external power and switch on the backup battery.

3.6. **Power Connection**

PWR (PIN1) / GND (PIN2) are the power input pins. The input voltage range for this device is from 8V to 32V. The device is designed to be installed in vehicles that operate on 12V or 24V systems without the need for external transformers.

Figure 8.   Typical Power Connection

3.7. **Ignition Detection**

Table 6. Electrical Characteristics of Ignition Detection

Logical State	Electrical State
Active	5.0V to 32V
Inactive	0V to 3V or Open

Figure 9.   Typical Ignition Detection

IGN (Pin3)is used for ignition detection. It is strongly recommended to connect this pin to ignition key "RUN" position as shown up.

An alternative to connecting to the ignition switch is to find a non permanent power source that is only available when the vehicle is running. For example the power source for the FM radio.

IGN signal can be configured to start transmitting information to backend server when ignition is on; and enter power saving mode when ignition is off.

3.8. **Digital Inputs**

There are one general purpose digital inputs on GV55. They are all negative trigger.

Table 7. Electrical Characteristics of the digital inputs

Logical State	Electrical Characteristics
Active	0V to 0.8V
Inactive	Open

The following diagram shows the recommended connection of a digital input.

Figure 10.   Typical Digital Input Connection

3.9. **Digital Outputs**

There are two digital outputs on GV55. All are of open drain type and the maximum drain current is 150mA. Each output has the built-in over current and recovery PTC fuse
Figure 11.   Digital Output Internal Drive Circuit

Table 8. Electrical Characteristics of Ddigital Outputs

| Logical State	Electrical Characteristics
Enable	<1.5V @150mA
Disable	Open drain

**Figure 12.   Typical Connection with Relay**

Figure 13.   Typical Connection with LED

Note:

1 - OUT1 will latch the output state during reset.

2- All outputs are internally without pulled up to PWR pin by a diode. So an external flyback diode is needed when the output is connected to an inductive load.
3.10. **Device Status LED**

Figure 14.   GV55 LED on the Case

GV55 has three status led that GSM GPS PWR led.

Table 9.   Definition of Device status and LED

LED	Device status	LED status
GSM (note1)	Device is searching GSM network	Fast flashing (Note3)
	Device has registered to GSM network.	Slow flashing (Note4)
	SIM card needs pin code to unlock.	ON
GPS (note 2)	GPS chip is powered off	OFF
	GPS sends no data or data format error.	Slow flashing
	GPS chip is searching GPS info.	Fast flashing
	GPS chip has gotten GPS info.	ON
PWR (note 2)	No external power and internal battery voltage is lower than 3.35V.	OFF
	No external power and internal battery voltage is below 3.5V.	Slow flashing
	External power in and internal battery is charging	Fast flashing
	External power in and internal battery is fully charged	ON

Note:

1 - GSM LED cannot be configured.

2 - GPS LED and PWR LED can be configured to turn off after a period of time using the configuration tool

3 - Fast flashing is about 60ms ON/ 780ms OFF

4 - Slow flashing is about 60ms ON/ 1940ms OFF
