What's New?

In the User Manual the icon **NEW !** has been added on the left margin to highlight information on new and updated features.

The changes linked to new features in version 2.1 are listed below.

Application Monitor now writes files to the AppData folder instead of it's own executable folder.

1. About the Application

Application Monitor is used in the IP2Archive setup to monitor the status of the (automatic) IP2Archive applications and their tasks and also the status of particular database jobs.

2. Installing the Application

See the [IP2Archive Installation manual](#) for more information on how to install the application.

3. Starting the Application

3.1. After Installation

To start the application after installation, proceed as follows:

1. Double-click the Application Monitor icon  on the server desktop to start the application. You can also launch the application by double-clicking the executable file (.exe) in the installation folder.

The application splash screen appears while the application logs into the IP2Archive database.

Then, the Settings window appears allowing you to configure the application. See section "Configuring the Application" on page "23".

3.2. After Configuration

To start the application after it has been configured, proceed as follows:

1. Double-click the Application Monitor icon  on the server desktop to start the application. You can also launch the application by double-clicking the executable file (.exe) in the installation folder.

The application splash screen appears while the application logs into the IP2Archive database.

Then, a Login dialog box appears.

To be able to log into the application, you need to belong to a user group that has a role which allows to use the application.

2. Enter your username and password and click **Login**. The main window of the application opens.

You get an error notification if:

- you have entered a wrong username or password.

- you have omitted your username.

- you have insufficient user rights.

- your user account has expired.

3.3. Version and License Check

Introduction

The version of the application and the validity of the application license will be checked when the application logs into the IP2Archive database at startup. The status of the version or the license that is returned is displayed on the application splash screen.

Version and License Statuses

The following version and license statuses can be returned:

| Status | Description | Color | Action Required |
|------------------|---|----------|---|
| Current | The actual version of the application. | no color | No action required. The application starts automatically. |
| Outdated | A newer version of the application exists, but this version can still be used. The application version that should be installed is displayed. | red | Click OK to start the application at once. By default, the application starts automatically after 10 seconds. |
| Obsolete | A newer version of the application exists and must be used. This version may not be used anymore. The application version that should be installed is displayed. | red | Click OK to continue. The application shuts down. |
| Undefined | The version of the application is not defined in the IP2Archive database. | black | Click OK to continue. The application shuts down. |
| Beta | A test version. | blue | Click OK to start the application. By default, the application starts automatically after 10 seconds. |

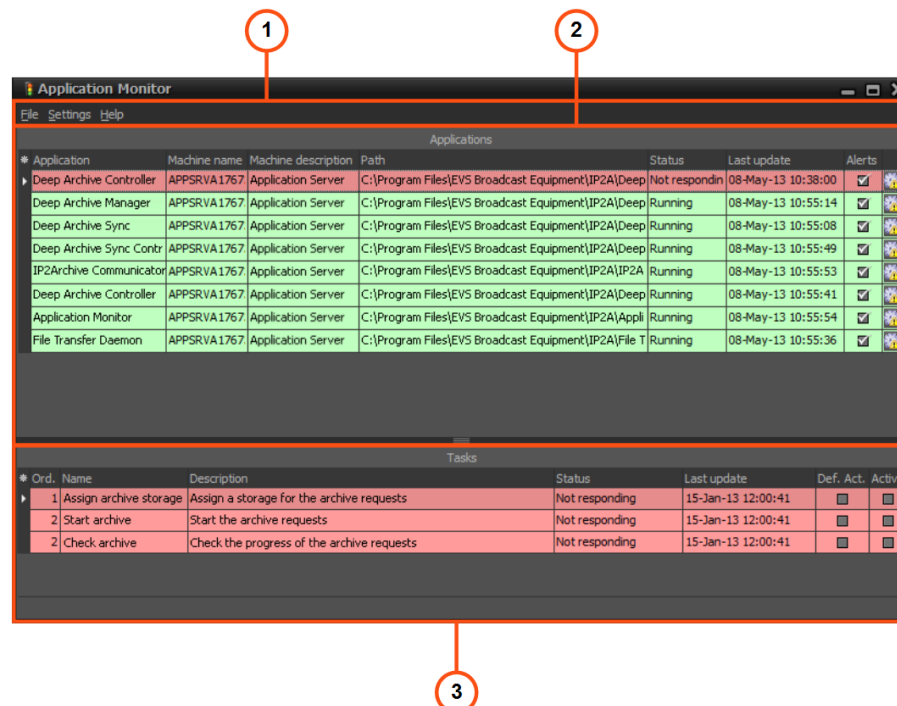

| Status | Description | Color | Action Required |
|---------------------------------|--|--------|--|
| License About to Expire | <p>The license period is about to expire. It is shown in how many days the license will expire.</p> <p>Contact your system administrator or check the License Controller manual.</p> | orange | <p>Click OK to start the application at once.</p> <p>By default, the application starts automatically after 10 seconds.</p> |
| License Expired | <p>The license period has expired. The date when the license expired is displayed.</p> <p>Contact your system administrator or check the License Controller manual.</p> | red | <p>Click OK to continue.</p> <p>The application shuts down.</p> |
| No Valid License | <p>There was no valid license found in the database.</p> <p>Contact your system administrator or check the License Controller manual.</p> | red | <p>Click OK to continue.</p> <p>The application shuts down.</p> |
| Maximum Licenses Reached | <p>The maximum number of instances <NUMBER OF LICENSES> for the license has been reached.</p> <p>Contact your system administrator or check the License Controller manual.</p> | red | <p>Click OK to continue.</p> <p>The application shuts down.</p> |

4. User Interface

4.1. Main Window

General Description

The main window gives you an overview of the (automatic) IP2Archive applications and database jobs whose status is monitored by Application Monitor.

Area Description

The table below describes the various parts of the main window:

| Part | Name | Description |
|------|-------------------|---|
| 1. | Menu bar | The menu bar contains three menus: File , Settings and Help . |
| 2. | Applications pane | The Applications pane displays the (automatic) IP2Archive applications and database jobs in the IP2Archive setup whose status is monitored by Application Monitor. See section "Applications Pane" on page "9". |
| 3. | Tasks pane | The Tasks pane displays the tasks of the IP2Archive application selected in the Applications pane. See section "Tasks Pane" on page "10". |

Menu Bar

The menu bar contains three menus: **File**, **Settings** and **Help**.

File Menu

The **File** menu contains two commands: **Logout** and **Exit**.

Click the **File** menu or use the keyboard shortcut keys **ALT + F** or **F10 + F** to open it.

Click **Exit** or use the keyboard shortcut key **X** to exit the application.

Click **Logout** or use the keyboard shortcut key **O** to log out of the application.

Settings Menu

The **Settings** menu does not contain any commands. It immediately gives access to the application settings. Click the **Settings** menu or use the keyboard shortcut keys **ALT + S** or **F10 + S** to access the settings.

Help Menu

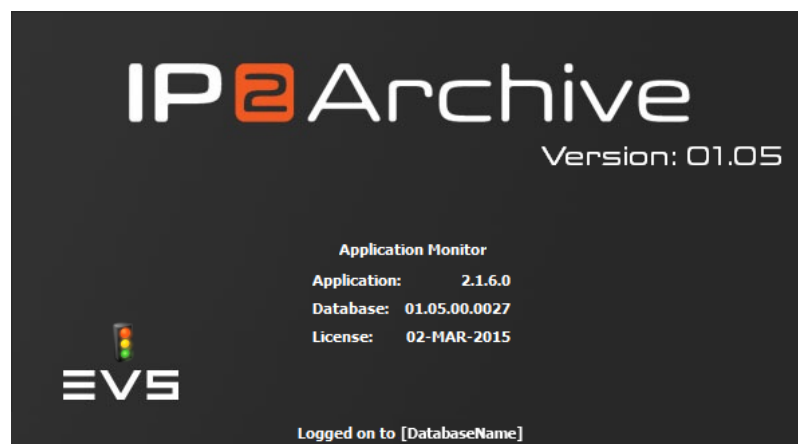

The **Help** menu contains the following commands: **Help**, **Context-Sensitive Help** and **About**.

With the **Help** command you can open the application help file.

With the **Context-Sensitive Help** command you can turn on or off the context-sensitive help mode. In context-sensitive help mode, when you click a user interface item, help for that item is displayed. You can also turn on or off context-sensitive help mode by pressing **F1**.

With the **About** command the application about box can be opened. The about box displays the application software version, the date until which the application license is valid, the name and version of the database the application is logged on to and the login name used.

Click **About** or use the keyboard shortcut key **A** to open the application about box.

4.2. Applications Pane

General Description

The Applications pane displays the (automatic) IP2Archive applications and database jobs in the IP2Archive setup that are monitored. Note that the applications and database jobs displayed in the screenshot below might differ slightly from the ones in your specific setup.

| Applications | | | | | | | |
|-------------------------|--------------|---------------------|--|---------------|--------------------|-------------------------------------|---|
| * Application | Machine name | Machine description | Path | Status | Last update | Alerts | |
| Deep Archive Controller | APPSRVA1767 | Application Server | C:\Program Files\EVS Broadcast Equipment\IP2A\Deep | Not respondin | 08-May-13 10:38:00 | <input checked="" type="checkbox"/> |  |
| Deep Archive Manager | APPSRVA1767 | Application Server | C:\Program Files\EVS Broadcast Equipment\IP2A\Deep | Running | 08-May-13 10:55:14 | <input checked="" type="checkbox"/> |  |
| Deep Archive Sync | APPSRVA1767 | Application Server | C:\Program Files\EVS Broadcast Equipment\IP2A\Deep | Running | 08-May-13 10:55:08 | <input checked="" type="checkbox"/> |  |
| Deep Archive Sync Contr | APPSRVA1767 | Application Server | C:\Program Files\EVS Broadcast Equipment\IP2A\Deep | Running | 08-May-13 10:55:49 | <input checked="" type="checkbox"/> |  |
| IP2Archive Communicator | APPSRVA1767 | Application Server | C:\Program Files\EVS Broadcast Equipment\IP2A\IP2A | Running | 08-May-13 10:55:53 | <input checked="" type="checkbox"/> |  |
| Deep Archive Controller | APPSRVA1767 | Application Server | C:\Program Files\EVS Broadcast Equipment\IP2A\Deep | Running | 08-May-13 10:55:41 | <input checked="" type="checkbox"/> |  |
| Application Monitor | APPSRVA1767 | Application Server | C:\Program Files\EVS Broadcast Equipment\IP2A\Appli | Running | 08-May-13 10:55:54 | <input checked="" type="checkbox"/> |  |
| File Transfer Daemon | APPSRVA1767 | Application Server | C:\Program Files\EVS Broadcast Equipment\IP2A\File T | Running | 08-May-13 10:55:36 | <input checked="" type="checkbox"/> |  |

Application and Database Job Information

Of each application and database job the following information is displayed:

| Column | Description |
|---|--|
| Application | The name of the application instance or database job. |
| Machine Name | The name of the machine on which the application instance or database job is installed. |
| Machine Description | The description of the machine on which the application instance or database job is installed. |
| Path | The path of the application's executable file. |
| Status | The status of the application or database job. See section "Application and Database Job Status" on page "11". |
| Last Update | The date and time the status of the application or database job was last updated in Application Monitor. |
| Alerts | The indication that an alert or notification will be sent when the application or database job is not responding or when an error has occurred. |
|  | The button used to open a configuration screen allowing you to enter a name for the application or database job and to enable and configure the sending of alerts. See section "Enabling Alerts" on page "13". |

If you select an application, the tasks performed by that application will be displayed in the Tasks pane below. See section "Tasks Pane" on page "10".

You can add, modify or remove a description of a particular machine in the settings. See section "General Tab" on page "25"

The applications and database jobs are displayed in a grid. Application Monitor has a number of features that allow you to customize the display of the data in the grid. See section "Managing Grids" on page "16".

4.3. Tasks Pane

General Description

The Tasks pane displays the tasks performed by the application you selected in the Applications pane. A task is an automatic job performed by the application. Each application has one or more tasks.

| Tasks | | | | | | |
|--------|------------------------|--|---------|--------------------|-------------------------------------|-------------------------------------|
| * Ord. | Name | Description | Status | Last update | Def. Act. | Active |
| 1 | Assign archive storage | Assign a storage for the archive request | Running | 04-Apr-14 11:49:55 | <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> |
| 2 | Start archive | Start the archive requests | Running | 04-Apr-14 11:49:58 | <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> |
| 3 | Check archive | Check the progress of the archive requests | Running | 04-Apr-14 11:50:01 | <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> |

Task Information

Of each task the following information is displayed:

| Column | Description |
|--------------------|---|
| Ord. | The sequence number of the task. |
| Name | The name of the task. |
| Description | The description of the task. |
| Status | The status of the task. See section "Application Task Status" on page "11". |
| Last Update | The date and time the status of the task was last updated in Application Monitor. |
| Def. Act. | Indicates if the task is active by default at startup. |
| Active | Indicates if the task is currently active. |

The tasks are displayed in a grid. Application Monitor has a number of features that allow you to customize the display of the data in the grid. See section "Managing Grids" on page "16".

5. Monitoring Applications and Database Jobs

5.1. Application and Database Job Status

An application or database job can have one of the following statuses.

| Status | Description |
|-----------------------|--|
| Running | The application or database job is running as it should. |
| Warning | The application or database job reported a warning. |
| Error | The application or database job reported an error. |
| Not Responding | The application or database job is not responding. |

Applications and database jobs that are running are highlighted in green.

The Application Monitor will highlight the application or database job in red when it cannot report its “healthy” status via the database to the Application Monitor.

This happens in the following situations:

- The application or database job is switched off.
- The application or database job has become unresponsive.
- The application can no longer connect to the database (Oracle connection lost).
- The application or database job got an unexpected error and is able to report this error status.

5.2. Application Task Status

An application task can have one of the following statuses:

| Status | Description |
|-----------------------|---|
| Running | The task is running as it should. |
| Warning | The task reported an warning. |
| Error | The task reported an error. |
| Not Responding | The task is not responding. |
| Inactive | The task is inactive by default. |
| Inactivated | The task is inactivated, but should be active by default. |
| Activated | The task is activated, but should be inactive by default. |

The tasks that are running are highlighted in green.

The Application Monitor will highlight the task in red when the task cannot report its “healthy” status via the database to the Application Monitor.

This happens in the following situations:

- The task is switched off.
- The task has become unresponsive.
- The task can no longer connect to the database (Oracle connection lost).
- The task got an unexpected error and is able to report this error status.

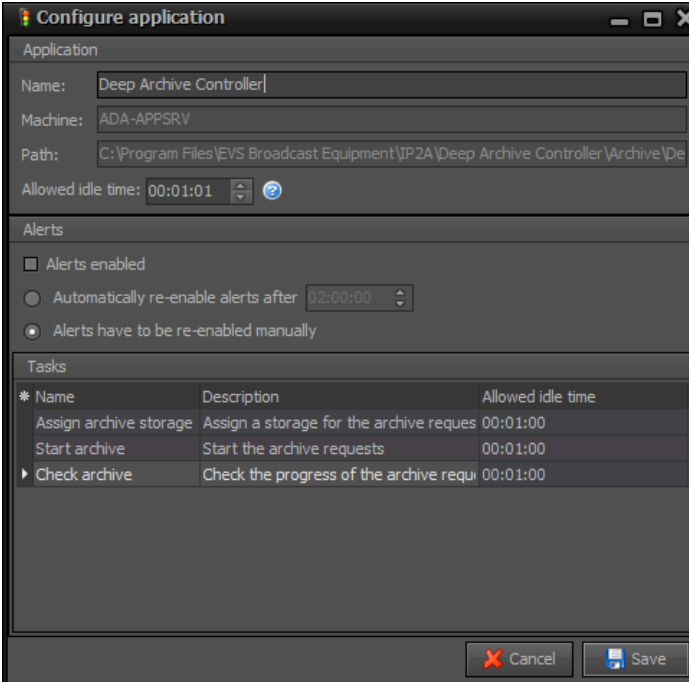

5.3. Modifying the Name of Applications and Database Jobs

If your IP2Archive setup has various instances of the same application, you can easily make a distinction by manually modifying the name of each instance. You can also modify the name of a database job.

To modify the name of an application instance or database job, proceed as follows:

1. Click the **Configure Application** button  of the respective application or database job.

The **Configure Application** dialog box appears.

| Name | Description | Allowed idle time |
|------------------------|---|-------------------|
| Assign archive storage | Assign a storage for the archive reques | 00:01:00 |
| Start archive | Start the archive requests | 00:01:00 |
| Check archive | Check the progress of the archive requi | 00:01:00 |

In the Application area, the **Name** field displays the name of the application instance or database job as set in the IP2Archive database.

2. Modify the name and click the **Save** button.

The name of the application instance or database job will be changed in the IP2Archive database and also in the Applications pane.

5.4. Enabling Alerts

Introduction

Application Monitor allows you to enable for each monitored automatic application and database job in your IP2Archive setup the automatic sending of alerts. Application Monitor will automatically send an alert when an application, application task or database job no longer responds because of an error or because it has been shut down.

Once an alert has been sent for a particular application or database job, Application Monitor will automatically disable the Alerts functionality for this application or database job. This to prevent Application Monitor from sending a new alert every minute.

This allows you the time to check and solve the problem.

The Alert functionality can either be manually reenabled by you, or you can configure Application Monitor to automatically reenable the Alert functionality after a preset time interval.

If the problem gets solved, no alert will be sent anymore.

How to Enble Alerts

Note

The alerts will only be delivered if:

- the Mail Controller is running
- you have specified the addressees for the alerts in the Global Settings.

To enable the Alerts functionality for a particular automatic application or database job, proceed as follows:

1. Click the **Configure Application** button  of the respective application or database job.

The **Configure Application** dialog box appears.

2. (Only for database jobs) In the **Allowed Idle Time** field, enter the time (in hh:mm:ss) a database job is allowed to be idle before Application Monitor will send an alert.

3. To enable the Alerts functionality, select the **Alerts Enabled** check box. By default, this option is disabled.

4. Select:

- **Automatically Re-enable Alerts After** if you want Application Monitor to automatically enable the Alerts functionality again a preset time interval after the Alerts functionality was automatically disabled.

If this option is selected and the Alerts functionality is automatically disabled, an extra field will appear displaying the actual time when the Alert functionality was disabled and the actual time when the alert functionality will be re-enabled again.

- **Alerts Have To Be Re-Enabled Manually** if you want to manually re-enable the Alerts functionality after it was automatically disabled.

The Tasks pane displays the name and a description of the tasks performed by the application. It also shows how long a particular task is allowed to be idle before Application Monitor will send an alert. Note that for a database job, this pane will be empty.

- (Only for applications) Modify the allowed idle of the desired tasks by entering a new value in the **Allowed Idle Time** field.

| Tasks | | |
|------------------------|---|-------------------|
| * Name | Description | Allowed idle time |
| Assign archive storage | Assign a storage for the archive reques | 00:01:00 |
| Start archive | Start the archive requests | 00:01:00 |
| ▶ Check archive | Check the progress of the archive requi | 00:01:00 |

- Click **Save** to store the settings in the database.

In the Application pane the **Alerts** check box will be selected.

Sample Alerts

Below you will find two sample alerts that are automatically sent when an application or database job is not responding because of an error or because it has been shut down.

The first sample alert indicates that on May the 8th at 10 o'clock the application DAC Test was not responding. Since the option **Automatically Re-enable Alerts After** is selected in the settings, a new alert will be send if the problem is not solved within the preset time interval.

Process => Application monitoring

Type => Error

Timestamp => 08/05/2013 10:18:18

Code => 100

Message => Application DAC Test is in state 'Not responding'

If the problem is not solved within 02:00:00 from now, this e-mail will be sent again.

The second sample alert indicates that on May the 8th at 10 o'clock the application DAC Test was not responding. Since the option **Alerts Have To Be Re-Enabled Manually** is selected in the settings, a new alert will not be sent, even if the problem is not solved.

Process => Application monitoring

Type => Error

Timestamp => 08/05/2013 10:18:18

Code => 100

Message => Application DAC Test is in state 'Not responding'

This e-mail will not be sent again, even if the problem is not solved.

6. Managing Grids

6.1. Introduction

In Application Monitor most of the data is displayed in grids. Each grid consists of a number of columns containing specific information.

Application Monitor provides you a number of features to customize each grid.

6.2. Manipulating Columns

6.2.1. Adjusting the Width of Columns

The width of each grid column can be manually or automatically adjusted.

How to Manually Adjust the Column Width

To manually adjust the width of a particular column, drag the right or left border of the column header until the column has the desired width.

To manually change the width of a column to fit its contents, double-click the boundary on the right side of the column header.

If you hold your cursor over a column header border, it will change into a double-headed arrow.

How to Automatically Adjust the Column Width

To automatically adjust the width of a column to fit its contents, right-click the column header, and then select the **Best Fit** option from the context menu.

To automatically adjust the width of all columns to fit their contents, right-click the column header, and then select the **Best Fit (all columns)** option from the context menu.

6.2.2. Reordering Columns

If you want the information in a grid to be displayed in a different order, you can change the position of the columns. There are two ways to reorder columns.

How to Reorder a Column Using a Drag-And-Drop Action

To reorder a column by directly dragging its header, proceed as follows:

1. Click the header of the column you want to move and hold down your left mouse button.
2. Drag the column header to the desired position in the grid.

Two arrows will indicate where it is possible to insert the column.

A black prohibition sign will indicate where the column cannot be inserted.

3. Release the left mouse button to insert the column.

How to Reorder a Column Using the Show/Hide/Move Button

You can also reorder the columns of a grid by using the **Show/Hide/Move** button:

1. Click  on the left side of the first column header.

A drop-down list containing the headers of the grid columns appears. The column headers are listed in the order in which the columns are displayed in the grid. The first header in the list is the leftmost field in the grid. The columns that are visible in the grid are selected.

The headers in the screenshot below can differ from the headers available in your application.

2. Select a header and drag it to the desired position in the list. Green arrows will appear indicating where you can insert the grid.

In the grid, the column will be moved to the new position.

6.3. Copying Data

To copy the data of a particular grid row to the Clipboard, proceed as follows:

1. Select the appropriate row in the grid.
2. Press CTRL +C.

6.4. Sorting Data

Each grid can be sorted according to the values in one of the columns. You can sort text (from A-Z or from Z-A), numbers (from low to high or from high to low).

How to Sort Data by Clicking a Column Header

To sort the data in a particular column, click the column header once to sort the data in ascending order. Click again to sort the data in descending order. An arrow next to the column header indicates the sorting method.

| | |
|---------|----------------------------|
| VarId ▲ | sorted in ascending order |
| VarId ▼ | sorted in descending order |

How to Sort Data by Using the Context Menu

You can also sort the data in a particular column by right-clicking the column header and selecting the desired sorting method from the context menu.

To clear the sorting in a particular column, right-click the column header and select the option **Clear Sorting** from the context menu.

6.5. Filtering Data

You can filter the data in a grid by using two types of filters: by one or more values from a particular column or by simple or complex criteria.

6.5.1. Filtering by Values From a Column

To filter the data in a particular grid by one or more values from a particular column, proceed as follows:

1. Hold your cursor over the header of the column by whose values you want to filter the grid, and then click the filter button.

A drop-down list opens containing all the column values.

2. Select the desired values.

Only the records that contain one of the selected values are displayed in the grid. At the bottom of the grid a filter bar appears displaying the applied filter.

3. In the filter bar, do one of the following:
 - Clear the check box next to the filter ☒ to undo it. Select the check box to apply the filter again.
 - Click ☐ to undo the filter and close the filter bar.
 - Click ☐ to open a drop-down list containing previously applied filters.
 - Click **Customize** to create a complex filter.

6.5.2. Filtering by Criteria

Filters by criteria can be simple or complex:

- **Simple filters** consist of one or two criteria and one Boolean operator (AND or OR).
- **Complex filters** consist of more than two criteria and more than one Boolean operator (AND, OR, NOT AND and NOT OR).

How to Create a Simple Filter

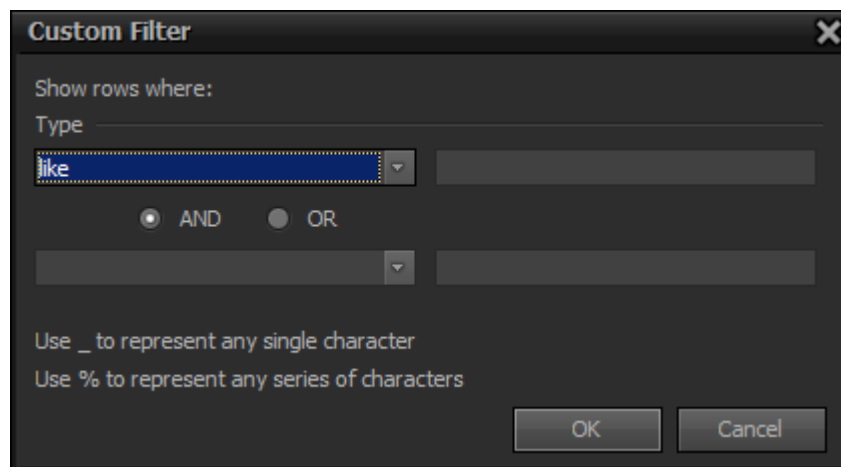

To create a simple filter, proceed as follows:

1. Hold your cursor over the header of the desired column, and then click the filter button appearing in the right corner.

2. From the drop-down list, select the option **(Custom...)**.

The Custom Filter dialog box appears. Here you can enter the criterion or the two criteria you want to filter the values of the selected column by.

3. Select the desired comparison operator from the first drop-down list.

A comparison operator is used in comparison criteria to compare two values.

Operators include: 'equals', 'does not equal', 'is less than', 'is less than or equal to', 'is greater than', 'is greater than or equal to', 'like', 'not like', 'is blank' and 'is not blank'.

For example, if you want to filter the values of a column by text that includes a certain word, character or sign, you have to select the comparison operator 'like'.

4. Enter text in the field next to the first drop-down list.

For example, if you want to filter by text that includes the letter 'S', type %S%.

The % wildcard can substitute for zero or more characters. The _ character can substitute for exactly one character.

5. If you want to add a second filter criterion, select the desired Boolean operator. Select:
 - **AND**, if both criteria have to be true;
 - **OR**, if at least one of the criteria or both have to be true.
 6. Select the desired comparison operator from the second drop-down list, and then enter text in the field at the right.
 7. Click **OK** to apply the filter.
- Only the values matching the entered criterion or criteria will be displayed.

How to Create a Complex Filter

To create a complex filter, proceed as follows:

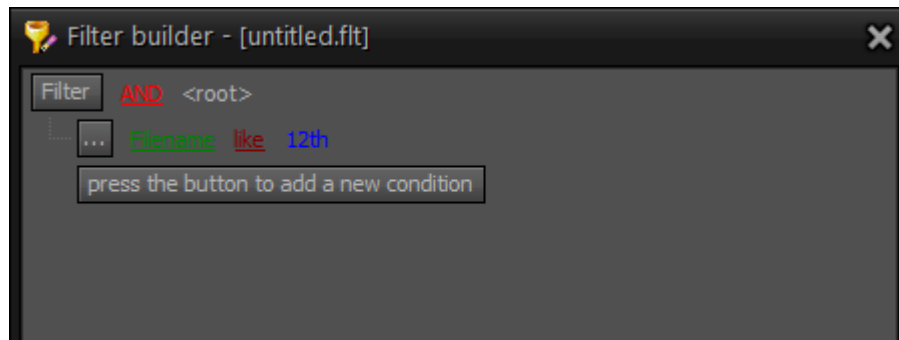

1. Apply a simple filter to a grid or filter a grid by selecting one or more values from a list of values. See above.

At the bottom of the grid a filter bar appears.

2. In the filter bar, click the **Customize** button.

A dialog box appears that allows you to create complex filters. The criteria of the active filter are displayed in a tree structure. Here you can add extra criteria and change the existing criteria.

3. Do one of the following:
 - To add a new criterion, do one of the following:
 - click the **Press the Button to Add a New Condition** button;
 - click the **Filter** button and select **Add Condition**;
 - click  next to a criterion and select **Add Condition**.
 - To change a criterion, do one of the following:
 - click a column header (green and underlined text) and select another value from the list;
 - click a comparison operator (dark red and underlined text) and select another value from the list: 'equals', 'does not equal', 'is less than', 'is less than or equal to', 'is greater than', 'is greater than or equal to', 'like', 'not like', 'is blank', 'is not blank', 'between', 'not between', 'in', 'not in';

- click the dark blue text on the right of the comparison operator and enter another value.
 - To delete a criterion, click the  button to the left of the criterion and select the option **Remove Row**.
 - To add a group of criteria, do one of the following:
 - click  next to a random criterion and select **Add Group**;
 - click the **Filter** button and select **Add Group**.
 - To delete all criteria, click the **Filter** button and select the option **Clear All**.
4. Do one of the following:
- To open an existing complex filter, click **Open**;
 - To save the current filter, click **Save As**;
 - To confirm the changes and close the dialog box, click **OK**;
 - To undo the changes, click **Cancel**.
 - To apply the changes, click **Apply**.

At the bottom of the grid a bar appears which displays the components of the complex filter. Note that if you have already created a custom filter in the past, you can reapply it by clicking the current filter or the downward pointing arrow. A drop-down list containing previous filters appears.

7. Configuring the Application

7.1. Settings Window

Opening the Settings Window

The Settings window allows you to configure your application. The first time the application is launched after it has been installed, the Settings window opens automatically.

The Settings window can also be accessed through the **Settings** menu.

Overview Setup Categories

The settings can be divided into two setup categories. In the Settings window, a tab is provided for each setup category. The table below briefly describes each setup category:

| Setup Category | Description |
|-----------------|---|
| User Settings | These settings can be configured by each individual user. |
| System Settings | These settings configure the general functioning of the application. They can only be configured by the system administrator. |

Edit Mode

To be able to edit the System settings, you first have to enter a password.

To put the Settings window into Edit Mode, proceed as follows:

1. Click the **Enter Into Edit Mode** button .

A dialog box appears.

2. Enter the administrator password and then click **OK**.

The Settings window enters into Edit Mode.

Note

Certain settings are read-only and cannot be configured. These can only be modified in the Configurator application. Other settings have to be configured locally.

Saving Settings

A **Save** button is provided which allows you to immediately save the changes you have made to the settings. With the **Cancel** button you can discard the changes you have made.

7.2. User Settings

7.2.1. Overview User Settings Subcategories

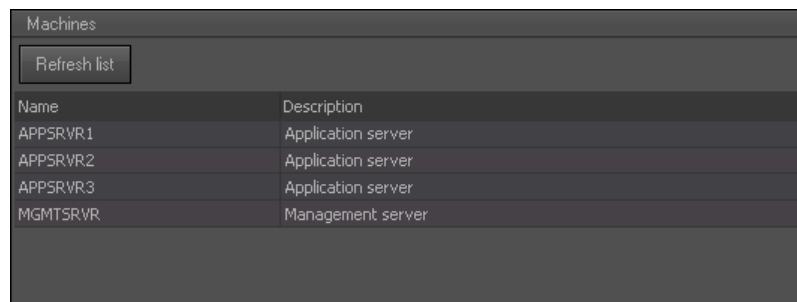

The User settings are divided into the following subcategories:

- General

For each subcategory a tab is provided.

7.2.2. General Tab

The General tab displays the name of the servers on which the (automatic) IP2Archive applications are installed that are monitored by Application Monitor. The names are retrieved from the IP2Archive database.

| Machines | |
|--------------|--------------------|
| Refresh list | |
| Name | Description |
| APPSRVR1 | Application server |
| APPSRVR2 | Application server |
| APPSRVR3 | Application server |
| MGMTSRVR | Management server |

With the **Refresh List** button you can retrieve the latest information from the IP2Archive database. The list of machines will be updated in its actual state.

You can add a description to each server. The description you enter here will appear in the **Machine Description** column in the Applications pane. See section "Applications Pane" on page "9".

7.3. Global Settings

7.3.1. Overview Global Settings Subcategories

The User settings are divided into the following subcategories:

- General

For each subcategory a tab is provided.

7.3.2. General Tab

The General tab allows you to search for and specify the recipients or addressees for the alerts that will be automatically sent by Application Monitor when an application or database job is no longer responding in your IP2Archive setup. See section "Enabling Alerts" on page "13".

The screenshot shows a software interface with two main sections: 'Relations' and 'Alerts'.

Relations Section:

- Search fields: 'Company:' and 'Contact:' with a 'Search' button.
- Table:

| * Company | Department | Contact | Email |
|-------------|--------------|-------------|----------------------|
| Company X | Headquarters | John Doe | j.doe@companyX.com |
| ▶ Company X | Headquarters | Peter Smith | p.smith@companyX.com |
| Company X | Headquarters | Andy White | a.white@companyX.com |

Alerts Section:

- Table:

| * Company | Contact | Email | Send mail |
|-------------|----------------|--------------------------|-------------------------------------|
| ▶ Company X | Peter Smith | p.smith@companyX.com | <input checked="" type="checkbox"/> |
| Company X | Tony Technical | t.technical@companyX.com | <input checked="" type="checkbox"/> |
| Company X | Andy White | a.white@companyX.com | <input checked="" type="checkbox"/> |

How to Add an Addressee

To add an addressee, proceed as follows:

1. In the Relations pane, search for the contact you want to add as addressee for the automatic alerts. Enter (part of) the name of the contact and/or the company and click the **Search** button.

The companies and contacts that correspond to your query appear in the grid below. The e-mail address of each contact is also displayed.

2. Double-click a contact to add him as addressee for the automatic alerts.

The contact is added to the Alerts grid. The **Send Mail** check box is automatically selected.

How to Remove an Addressee

To remove an addressee again, do one of the following:

1. Select the contact and click the - sign.

OR

Double-click the contact.

2. Click **OK** to confirm your action.

7.4. System Settings

7.4.1. Overview System Settings Subcategories

The System settings are divided into the following subcategories:

- General
- Oracle Connection

For each subcategory a tab is provided.

7.4.2. General Tab

The General tab lists the IP2Archive applications and database jobs that are installed in your IP2Archivesetup. It enables you to specify which applications, application tasks and database jobs should be monitored by Application Monitor. Note that the applications and database jobs displayed in the screenshot below might differ from the applications in your specific setup.

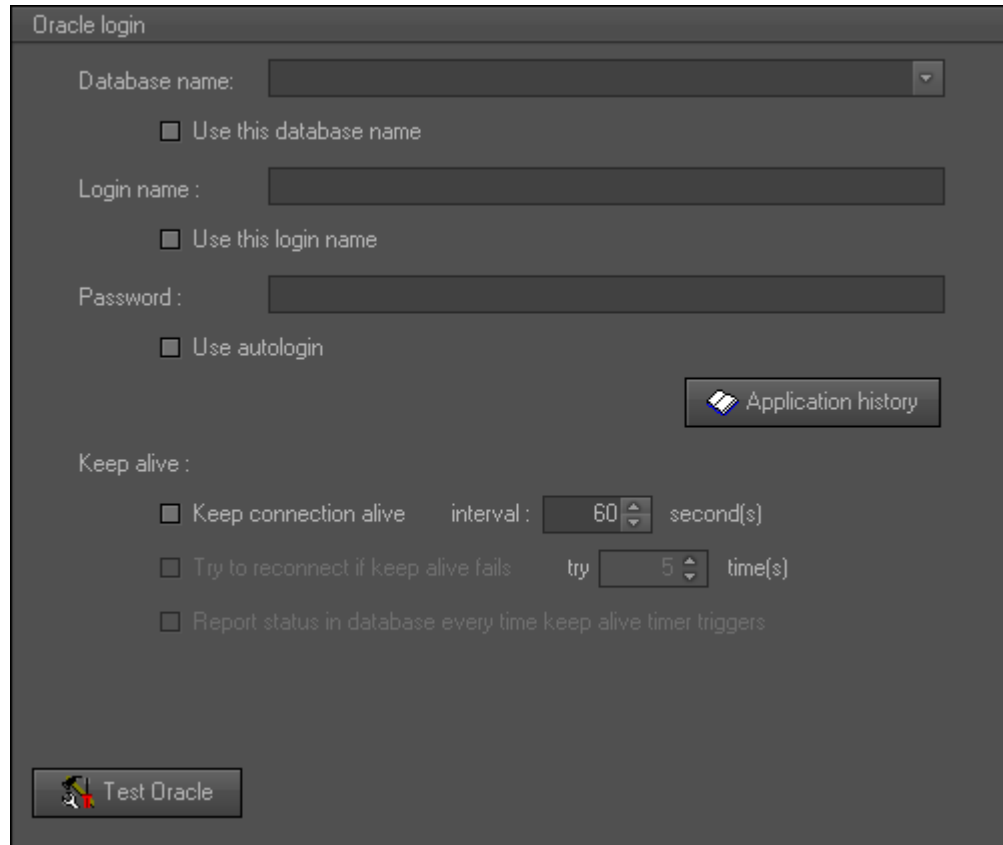

| Application | Machine | Path | Visible |
|---------------------------|---|-------------------------------------|-------------------------------------|
| Application Monitor | ADA-APPSRV | C:\Program Files\EVS Broadcast Equ | <input checked="" type="checkbox"/> |
| Deep Archive Manager | WIN-WD26JOCSSWOO | C:\Program Files\EVS Broadcast Equ | <input type="checkbox"/> |
| ▶ Deep Archive Sync | ADA-APPSRV | C:\Program Files\EVS Broadcast Equ | <input checked="" type="checkbox"/> |
| ▼ Deep Archive Controller | ADA-APPSRV | C:\Program Files\EVS Broadcast Equ | <input checked="" type="checkbox"/> |
| Ort Name | Description | Def. Act. | Visible |
| 1 Assign archive storage | Assign a storage for the archive requests | <input type="checkbox"/> | <input type="checkbox"/> |
| 2 Start archive | Start the archive requests | <input type="checkbox"/> | <input type="checkbox"/> |
| 3 Check archive | Check the progress of the archive requests | <input type="checkbox"/> | <input type="checkbox"/> |
| 4 Assing restore storage | Assign a storage for the restore requests | <input type="checkbox"/> | <input type="checkbox"/> |
| 5 Start restore | Start the restore requests | <input type="checkbox"/> | <input type="checkbox"/> |
| 6 Check restore | Check the progress of the restore requests | <input type="checkbox"/> | <input type="checkbox"/> |
| 7 Synchronise online copy | Synchronise 'copy online' status | <input type="checkbox"/> | <input type="checkbox"/> |
| 8 Remove online copy | Remove online copy of video | <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> |
| 10 Retrieve tape ids | Retrieve tape on which files have been archived | <input type="checkbox"/> | <input type="checkbox"/> |
| 11 Start purge | Start the purge requests | <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> |
| 12 Check purge | Check the purge requests | <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> |

If you select the **Visible** check box of a particular application, application task or database job, it will appear in the Applications pane of the main window. See section "Applications Pane" on page "9". Application Monitor will check the status of this application, application task or database job.

To view the tasks of an application, click . To hide the tasks again, click .

7.4.3. Oracle Connection Tab

The Oracle Connection tab allows you to configure the connection with the Oracle database.

The screenshot shows the 'Oracle login' dialog box. It has a title bar 'Oracle login'. Inside, there are three text input fields: 'Database name:', 'Login name:', and 'Password:'. Below each field is a checkbox: 'Use this database name', 'Use this login name', and 'Use autologin'. To the right of the 'Password:' field is a button labeled 'Application history' with a document icon. Below these fields is a section labeled 'Keep alive:' containing three checkboxes: 'Keep connection alive', 'Try to reconnect if keep alive fails', and 'Report status in database every time keep alive timer triggers'. The 'Keep connection alive' checkbox is selected. Next to it is a label 'interval:' followed by a spinner box showing '60' and the text 'second(s)'. Below the 'Try to reconnect if keep alive fails' checkbox is a label 'try' followed by a spinner box showing '5' and the text 'time(s)'. At the bottom left is a button labeled 'Test Oracle' with a small icon of a person and a red star.

Entering the Database Name

In this field you have to enter the name of the database the application has to connect to.

If the **Use This Database Name** check box is selected, the name of the database will automatically appear in the Oracle login dialog box at start-up.

Note that the database name will be automatically entered and the **Use This Database Name** check box will be automatically selected when you log into the application for the very first time.

Entering the Login Name

In this field you have to enter a login name. If the **Use This Login Name** check box is selected, the login name will automatically appear in the Oracle login dialog box at start-up.

Note that the login name will be automatically entered and the **Use This Login Name** check box will be automatically selected when you log into the application for the very first time.

Entering a Password

In this field you have to enter a password. If the **Use Auto Login** check box is selected, the application automatically logs into the selected database at start-up. The Oracle login dialog box does not appear.

Note that the password will be automatically entered and the **Use Login** check box will be automatically selected when you log into the application for the very first time.

Checking Application History

By clicking the **Application History** button, you can open a chronological list of all software versions of the application. To get more details about each version (creation date, name of programmer, status, additional remarks), you have to click + next to the version number.

Activating Keep Alive

If the option **Keep Connection Alive** is selected, a message is sent to the database at regular time intervals to avoid idle connections from being closed by the firewall. These intervals can be set by you.

Note that this option will be automatically selected when you log into the application for the very first time.

If the option **Try to Reconnect if Keep Alive Fails** is selected, the application will try a number of times to reconnect with the database.

If the option **Report Status in Database Everytime Keep Alive Timer Triggers** is selected, the status of the connection is reported in the database each time the Keep Alive Timer sends a trigger to send a Keep Connection Alive message.

Testing the Oracle Connection

The **Test Oracle** button allows you to check the validity of the database name, login and username you entered.

If these data are valid, then the following message appears next to the **Test Oracle** button: 'OK'.

If the login name or password is invalid, then a message box appears with the following message: 'ORA-01017: invalid username/password; logon denied'.

If the database name is invalid, then a message box appears with the following message: 'ORA-12154:TNS: could not resolve the connect identifier specified'.

If you omit the password, then a message box appears with the following message: 'ORA-01005: null password given; logon denied'.

If you do not enter a database name, login and username, then a message box appears with the following message: 'ORA-12560: TNS: protocol adapter error'.

You can also check the software version of the application by clicking the **Test Oracle** button. If the software version is up-to-date, then the following message appears: 'Current– The Current Version'. If the software version is outdated, then the following message appears: 'Unknown Version Application! Please contact the EDP department.'

If you close the Settings window without testing the validity of the database name, login and username you just entered, then a message box appears.

If you click **Yes**, then the Settings window is closed and the original values are restored. If you click **Cancel**, then the Settings window does not close and you can test the values by clicking the **Test Oracle** button.

If you change the current database settings, test the connection and then close the Settings window, a message box will appear.

If you click **Yes**, the application is stopped and closed. A manual restart will be required. Click **Cancel** to continue.
