

# SAM3S Microcontroller Series Schematic Check List

## 1. Introduction

This Application Note is a schematic review check list for systems embedding Atmel's SAM3S series of ARM® Cortex™-M3, Thumb®2-based microcontrollers.

It gives requirements concerning the different pin connections that must be considered before starting any new board design and describes the minimum hardware resources required to quickly develop an application with the SAM3S Series. It does not consider PCB layout constraints.

It also gives advice regarding low-power design constraints to minimize power consumption.

This Application Note is not intended to be exhaustive. Its objective is to cover as many configurations of use as possible.

The Check List table has a column reserved for reviewing designers to verify that the line item has been checked.

## 2. Associated Documentation

Before going further into this Application Note, it is strongly recommended to check the latest documents for the [SAM3S Series Microcontrollers](#) on Atmel's Web site.

[Table 2-1](#) gives the associated documentation needed to support full understanding of this application note.

**Table 2-1.** Associated Documentation

## 3. Schematic Check List

| ☑ | Signal Name | Recommended Pin Connection                                                                             | Description                                                                                                                                                                                                                                                                                              |
|---|-------------|--------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|   | VDDIN       | 1.8V to 3.6V<br>Decoupling/Filtering capacitor<br>(10μF or higher ceramic capacitor) <sup>(1)(2)</sup> | Powers the voltage regulator, ADC, DAC and Analog comparator power supply.                                                                                                                                                                                                                               |
|   | VDDIO       | 1.62V to 3.6V<br>Decoupling/Filtering capacitors<br>(100 nF and 2.2μF) <sup>(1)(2)</sup>               | Powers the peripheral I/Os, USB transceiver, Backup part, 32kHz crystal oscillator and oscillator pads.<br>Decoupling/Filtering capacitors must be added to improve startup stability and reduce source voltage drop.<br><b>Warning: At power-up VDDIO needs to reach 0.6V before VDDIN reaches 1.0V</b> |
|   | VDDOUT      | Decoupling/Filtering capacitors<br>(100 nF and 2.2μF) <sup>(1)(2)</sup>                                | 1.8V Output of the main voltage regulator.<br>Decoupling/Filtering capacitors must be added to guarantee stability.                                                                                                                                                                                      |

| ☑ | Signal Name | Recommended Pin Connection                                                                                     | Description                                                             |
|---|-------------|----------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------|
|   | VDDCORE     | Must be connected directly to VDDOUT pin.<br>1.62V to 1.95V<br>Decoupling capacitor (100 nF) <sup>(1)(2)</sup> | Power the Core, the embedded memories and the peripherals power supply. |
|   | VDDPLL      | 1.62V to 1.95V<br>Decoupling capacitor (100 nF) <sup>(1)(2)</sup>                                              | Powers PLLA, PLLB, the Farst RC and the 3-20 MHz oscillator.            |
|   | GND         | Ground                                                                                                         | Ground pins GND are common to VDDIO, VDDPLL and VDDCORE                 |

**Note:** Restrictions

With Main Supply < 2.0 V, USB and ADC/DAC and Analog comparator are not usable.

With Main Supply  $\geq$  2.0V and < 3V, USB is not usable.

With Main Supply  $\geq$  3V, all peripherals are usable.

## Core Externally Supplied.

Core externally supplied Schematic Example:  
Main Supply on VDDIO, and VDDIN (1.8V to 3.6V).  
VDDCORE Supply is between 1.62V and 1.95V.

| ☑ | Signal Name | Recommended Pin Connection                                                                                            | Description                                                                                                                                                                                                                  |

- Notes:
1. These values are given only as a typical example.
  2. Decoupling capacitors must be connected as close as possible to the microcontroller and on each concerned pin.

3. USB Device Typical connection: copy of Figure 37-2 of the Datasheet

**Figure 37-2.** Board Schematic to Interface Device Peripheral

4. Note that the ADC voltages in 10-bit mode resolution (ADC 12-bit in low resolution) can descend to 2.0V. Only one ADC is available on the SAM3S series.

## 4. SAM3S Boot Program Hardware Constraints

See AT91SAM Boot Program section of the [SAM3S Series Datasheet](#) for more details on the boot program.

### 4.1 SAM-BA Boot

The SAM-BA<sup>®</sup> Boot Assistant supports serial communication via the UART or USB device port:

- UART0 Hardware Requirements: none.
- USB Device Hardware Requirements:  
 External Crystal or External Clock<sup>(1)</sup> with frequency of:
  - 11,289 MHz
  - 12,000 MHz
  - 16,000 MHz
  - 18,432 MHz

Note: 1. Must be 2500 ppm and 1.8V Square Wave Signal

**Table 4-1.** Pins driven during SAM-BA Boot Program execution

| Peripheral | Pin  | PIO Line |
|------------|------|----------|
| UART0      | URXD | PA9      |
| UART0      | UTXD | PA10     |

## 5. Revision History

**Table 5-1.** Revision History
