# Paper Rolls Plus

## Installation

### **General Information**

### Where to Put the Terminal

Select a location for the terminal near a power outlet and a telephone jack that is convenient for the operator and offers adequate ventilation and protection. Certain conditions may damage the terminal or cause it to operate poorly. In general, avoid areas with:

- Excessive heat or dust
- Oil or moisture
- Electrical noise caused by air conditioners, motors, fans, neon signs, or power tools
- Direct sunlight
- Artificial light that could reflect glare off the display panel

### Unpacking

Carefully inspect the shipping carton and its contents for shipping damage. If the terminal is damaged, file a claim immediately with the shipping company and notify Chase Paymentech. Do not use a damaged terminal.

Remove all the items from the carton. It should contain:

- A terminal
- A telephone line cord
- A power pack with a 6-foot cord
- Paper roll

Remove any protective plastic wrapping or protective plastic strips from the terminal.

Save the carton and packing material for repackaging or moving the terminal in the future.

#### **Connecting the Telephone Line**

To connect terminals to a telephone line:

- 1. Connect one end of the standard telephone line cord to the high-speed dial modem port on the terminal.
- 2. Connect the other end of the telephone line cord to the telephone wall jack (Telco RJ11).

### **Connecting the Cat5 Cable for Ethernet Processing**

To connect terminals with a Cat5 Cable:

- 1. Connect one end of the Cat 5 Cable to the Ethernet port on the terminal.
- 2. Connect the other end of the Cat 5 Cable to the Ethernet wall jack or router.

Note: The Vx520 is labeled ETH.

#### **Connecting the Power Pack**

**Warning!** Do not plug into an outdoor outlet or operate the terminal outdoors. Operating the terminal in direct sunlight may damage the terminal, as can other outdoor factors. Do not unplug the terminal while processing a transaction. Doing so may cause transaction errors within the terminal or at the host.

- 1. Plug the AC power cord into an indoor AC outlet.
- 2. If not already attached, plug the AC power cord into the AC adapter.
- 3. Attach the small plug on the AC adapter cord to the power port on the rear of the terminal.

Ethernet Jack

/Router

Note: The Vx820 comes with a 1 piece power pack.

#### Installing a Paper Roll

To install a roll of paper:

- 1. Vx510-DC: Open the printer cover by pressing down on the release on the right side of the terminal Vx520: Open the printer cover by pulling the release on the top of the cover.
- 2. Hold the roll of paper with the leading end coming from the bottom of the roll and pointing toward the front of the terminal then place into the paper roll cradle.
- 3. Close the printer cover making sure the leading edge of the paper remains on the outside, and that the lid has snapped down securely.

Note: Pressing the 3 key from SoftPay will feed the paper.

#### **Connecting a PINpad**

**Warning!** Ensure that the terminal is disconnected from the power source before plugging in the PINpad. If the terminal is already connected to the power source, the terminal will not recognize the PINpad when plugged in and will erase the encryption.

#### 1000SE, SC5000, and Vx810/Vx805/Vx820 PINpad:

- If necessary, insert the small modular plug on one end of the PIN pad cable into the modular jack on the PIN pad. (see illustration below for Vx810/Vx805/Vx820)
- Insert the larger connector on the other end of the PIN pad cable into the "PINpad" port on the rear of the Vx510 terminal or the RS232 Port on the Vx520 terminal.
- 3. Connect the terminal to the power source as a last step.

Note: The Vx810/Vx820 cable has a unique connector style and will require a small (precision type) phillips screwdriver to attach.

#### PIN PAD CONNECTOR

#### Everest Plus, Omni 7000 and Mx830 PlNpad:

- 1. Connect the Data Cable to Port 2 on the Multi-port cable.
- 2. Connect the other end of the Data Cable to the PINpad port on the rear of the terminal.
- 3. Connect the Multi-port cable to the bottom of the Everest/.
- 4. Connect the Everest/Omni 7000/Mx830 power pack to the power port on the Multi-port cable.
- 5. Connect the VeriFone Terminal to the terminal power source.

#### **Everest Plus Firmware Verification:**

Press *Enter* and 7 at the same time. At the *PSWD*? prompt, key in *166831* and press *Enter*. The firmware will display at the bottom right of the screen. Press *clear* 2 times to return to idle.

### Vx510 Dual Comm

### Vx510 Dual Comm Ports

The Vx510 diagram below is shown from underneath with the paper roll cradle at the top.

### Vx520 CTLS

Note: there is a rear cover on the Vx520 that is used for cable management.

### Vx610

After unpacking a new device, install the battery and connect the plug the terminal into a power source for 6 hours. It is recommended to fully discharge the battery periodically and/or perform a battery conditioning.

The terminal automatically enters sleep mode after 10 minutes of inactivity, and then turns off after 15 additional minutes of inactivity, when running on battery power.

### Vx610 Ports

### Turning the Vx610 On and Off

Off – Hold down [Cancel] for approximately 5 seconds.

The Vx610 can only be turned off when it is running on battery. When plugged in to a power source, it can not be turned off.

On - Hold down [Enter] for approximately 5 seconds.

Wait approximately 1 minute for communications to re-establish.

#### Vx610 Wireless Icons

Wireless icons located on the SoftPay idle screen alert the user of the terminal status. The icons do not appear until a transaction has been attempted with the exception of the battery status and power on icons.

Communication Methods					
G	The Comm Server application is being utilized by the terminal for communication				
	Landline or dial-up is being used.				
	Antenna Connection				
1	Displays when the wireless modem is connected to the network.				
	Displays when the wireless modem is not connected to the network.				
	Signal Strength				
	Displays when the signal strength is between 1 and 25%.				
•	Displays when the signal strength is between 26 and 50%. Note: At least 35% is recommended to prevent processing comm errors.				
•	Displays when the signal strength is between 51 and 75%.				
	Displays when the signal strength is between 76 and 100%.				
-	Power On				
Le	Displays to indicate that the Vx610 is plugged in.				
Battery Status					
Ó	Empty battery				
Ĺ	Batter at 25% capacity.				
	Batter at 50% capacity.				
	Batter at 75% capacity.				
	Batter at 100% capacity.				
103 88F	Low battery – less than 10%				

### **Battery Conditioning**

Perform battery conditioning to maximize battery life. The process will take several hours and the device must be connected to power.

Display	Action
Sale F2 Settlement F3 Void F4	Press [F2] and [F4] simultaneously.

STEP 1/3 1ST CHARGE	Battery fully charges. No action required.
STEP 2/3 DISCHARGE	Battery fully discharges. No action required.
STEP 3/3 CHARGE	Battery fully charges. No action required.

#### **Connecting the Antenna**

- 1. Connect the antenna to the outlet on the back of the VX610 terminal.
- 2. Turn the antenna clockwise until tight. Do not over tighten the antenna.

### Attaching/Detaching the Battery Pack

To attach the battery pack:

- 1. Place the battery pack into the available slot on the back of the terminal.
- 2. Snap into place.

To detach the battery pack:

- 1 Push in on the grooved side of the battery pack
- 2 Lift up battery until removed.

## Transactions

Shading indicates prompts or menus that display based on how the terminal is setup.

### Sale

#### Sale

## **Error Messages**

### **Application Processing Messages**

Error	Explanation	Action
Accumulator err	The terminal is not able to update the local transaction totals.	Escalate to TPS.
Address Unavail	AVS could not be validated.	Either accept the transaction with failed AVS or cancel the current transaction. Retry the transaction and key the correct Address.
AddZip Mismatch	Neither the address nor zip code keyed matched the address and zip code.	Either accept the transaction with failed AVS or cancel the current transaction. Retry the transaction and key the correct Address and Zip Code.
Adjust Not Allwd	The terminal is not set up to allow adjustments.	Adjustments are not allowed, check terminal download file settings.
Amt Too Large	The HALO for the sale or refund exceeds the limits set. Also, a host generated error, Amount Too Large 420 or 421 will appear if the Max Debit Return is enabled on Tandem.	<ul> <li>Enter a valid amount under the limits set by HALOS, HALOC or HALOR in the download file.</li> <li>If the error is generated immediately after connecting to the host, the Max Debit Return is enabled on Tandem.</li> </ul>
AVS Error	AVS could not be validated.	Either accept the transaction with failed AVS or cancel the current transaction. Retry the transaction and key the correct AVS information.
Bad Account #	The credit or gift card number does not have a valid check digit.	<ul><li>Retry the transaction.</li><li>If problem persists, use another form of payment.</li></ul>
Bad card length	The card number entered is not within the minimum and maximum number of digits in the card BIN range.	<ul> <li>Re-swipe the card.</li> <li>Manually key the card.</li> <li>If problem persists, use another form of payment.</li> </ul>
Batch Clear failed	The automatic batch delete operation failed after the settlement.	<ul><li>Manually clear the batch.</li><li>If error persists, perform a full download.</li></ul>
Batch Full	The current batch is full. It must be closed before new transactions are performed.	Perform a settlement.
Card Not Supported	Displayed when the card type used isn't found within the BIN ranges.	<ul> <li>Verify the BIN range present and is enabled to accept the card type.</li> <li>If manual entry, verify it is enabled in the BIN.</li> <li>Retry the transaction. If problem persists, use another form of payment.</li> </ul>
Card Swipe Error	Displayed when the terminal is unable to read the data from the cards magnetic stripe.	<ul> <li>Retry the transaction.</li> <li>If problem persists, perform a swipe test (chapter 6).</li> </ul>
Comm Server Fail / Comm Error	Displayed when the terminal is unable to connect to the host.	<ul> <li>Retry the transaction.</li> <li>If the error persists, reboot the terminal from the System Mode menu.</li> <li>Verify the phone or Ethernet connection is working.</li> <li>Verify the communication parameters in the download file, and perform a full download.</li> </ul>

Error	Explanation	Action
Close Batch	Displays when the batch is more than 90% full between transactions. When the batch is full, the Batch Full message displays until the batch is closed.	Perform a batch settlement.
Download Failed	Displayed after a download does not complete because of a connection lost or no host response.	Retry the download.
Empty Batch	Displays if the current batch is empty and a report is requested that displays or prints the transactions in the batch.	Information only message.
Error reading card device	Displayed when the terminal is unable to read the data from the cards magnetic stripe.	<ul> <li>Retry the transaction.</li> <li>If problem persists, perform a swipe test (chapter 6).</li> </ul>
Exec nn	An unexpected application error has occurred.	<ul> <li>Reboot the terminal from the System Mode menu.</li> <li>If error persists, perform a full download.</li> </ul>
Expired card	The card expiration date has passed.	<ul> <li>Verify the Date/Time on the terminal.</li> <li>Request another form of payment.</li> </ul>
Failure: {file name and path}	The listed file names failed the security check. The error will display and the application will not start.	Perform a full download.
Fatal Memory Error	An error has corrupted the terminal's RAM resulting in the loss of a program download.	Perform a full download.
File not found	The terminal could not find the download file requested in VeriCentre.	<ul> <li>Verify parameter *ZT in the terminal and verify that the file is present in VeriCentre.</li> <li>Retry the download.</li> </ul>
File Error Page	One of the files in SoftPay is corrupted.	Perform a full download on the terminal.
Invalid Accnt No	At the last four digits prompt, the incorrect digits were keyed.	<ul> <li>Rekey the last 4 digits from the card.</li> <li>If error persists, request another form of payment. The card may be fraudulent.</li> </ul>
Invalid amount	The amount entered is invalid.	Rekey the dollar amount.
Invalid card length	The card number entered is not within the minimum and maximum number of digits in the card BIN range.	<ul> <li>Re-swipe the card.</li> <li>Manually key the card.</li> <li>If problem persists, use another form of payment.</li> </ul>
Invalid Clrk Id	The clerk/server number keyed has not been added to the clerk/server table through Servers/Clerk Setup.	Add the clerk via the Clerk Setup function (chapter 6).
Invalid Invoice#	The invoice number selected in not valid.	Re-key a valid invoice number.
Invalid Password	The password entered is not valid.	Re-key the valid password.
Invalid STAN	The host response indicated the current STAN value is not correct.	Escalate to TPS.
Invalid Clrk/Srvr Id	The clerk/server number keyed has not been logged on.	Add the clerk/server number to the clerk table through Clerk/Server Setup. Reference Manager Functions chapter.
Invld TCT track #	An invalid numeric value for the track number was entered.	Escalate to TPS.
Memory Error	The terminal's memory is not initialized.	Perform a full download.
No Data Avail	A reprint was requested with no transactions in the batch.	A reprint can not be performed on a settled transaction.

Error	Explanation	Action		
No Manual Entry	The current transaction type does not allow manual entry of the card number.	<ul> <li>Retry the transaction by swiping the card.</li> <li>If the mag stripe is bad and cannot be swiped, ask for another form of payment.</li> <li>Confirm Bin range setting for the card type.</li> </ul>		
No Match Found	No transaction was found with the requested amount.	Attempt to retrieve the transaction by other criteria.		
No Resp From Pad	The terminal did not receive expected data (SYN) from ISDN Pad.	<ul> <li>Verify the PINpad is attached to the correct port, if not, power down terminal then connect. (chapter 2)</li> <li>Verify that the correct PINpad settings are in the download file and perform a partial download if needed.</li> </ul>		
PINpad Error	The terminal is programmed for debit but no PINpad is attached or PINpad parameters do not match the PINpad.	<ul> <li>Verify the PINpad is attached to the correct port, if not, power down terminal then connect. (chapter 2)</li> <li>Verify that the correct PINpad settings are in the download file and perform a partial download if needed.</li> </ul>		
Pls Dnld Comm Server	The terminal is attempting to process via the Ethernet port but does not have the Comm Server application programmed.	<ul> <li>To process via Frame or NetConnect, add the Comm Server to the download file and set the correct Softpay parameters to Frame/NetConnect.</li> <li>Perform a full download.</li> </ul>		
Phone Num Flds Empty	The Primary and Secondary phone number fields are blank	Update the terminal record on VeriCentre and perform a partial download.		
Printer error	The terminal is not able to print the receipt.	<ul> <li>Verify paper is loaded correctly. (chapter 2)</li> <li>If the green paper light is blinking and there is paper loaded correctly, the printer module may be bad.</li> </ul>		
Read Card Err	The card swipe was not read due to the way the card was pulled through the reader.	<ul> <li>Retry transaction by swiping card or manually key card number.</li> <li>Perform a card reader test. (chapter 6)</li> </ul>		
Reading error	The card reading device detected an error.	<ul> <li>Retry transaction by swiping card or manually key card number.</li> <li>Perform a card reader test. (chapter 6)</li> </ul>		
Record Not Found	The message appears when attempting to retrieve a transaction by invoice, account number, amount or clerk/server and the record is not in the batch.	Rekey the correct information.		
Reprint info load fail	The terminal is not able to get the reprint information from the file.	Escalate to TPS.		
Reprint info save fail	The terminal is not able to save the reprint information on the file.	Escalate to TPS.		
Retry AVS	AVS could not be validated. This error occurs only when AVS Override is enabled.	<ul> <li>Accept or cancel the transaction with the failed AVS.</li> <li>If canceled, retry and key correct AVS information.</li> </ul>		
Reversal file error	The terminal detects an error while reversing the earlier transaction.	<ul><li>Retry the transaction.</li><li>If error still persists, escalate to TPS.</li></ul>		
Settl Neg Batch	Terminal is confirming to settle a negative batch when SNEGB1 is set to 1:	After verifying the current batch, confirm the settlement.		
SECFILE.DAT not found!	The security file was not found.	<ul><li>Rebuild the download file.</li><li>Perform a full download.</li></ul>		
Settle Not Allowed	A settlement is being attempted when the terminal is in Demo mode.	Parameter TSTLE1 is set to 0 to not allow settlements in demo mode. Change TSTLE1 to 1,perform a partial.		
Settlement Failed	The attempted Settlement was not successful.	<ul> <li>Verify there is no error on Tandem, retry settlement.</li> <li>If there is an error on Tandem, troubleshoot error.</li> </ul>		
Shift Not ON	This message appears if you access the Shift Report when the Shift Option is off.	Enable shift processing.		

Error	Explanation	Action
Table Init Error	The terminal encounters an error in one of the terminal records after a download.	<ul> <li>Verify there are no parameter conflicts in the download file. For example, if table number is enabled in retail or if the BIN range is missing a field.</li> <li>Fix conflict and perform a partial download. Or, rebuild download file and perform a full download.</li> </ul>
Track not found	There is no track on the card, or the track is unreadable.	Manually enter the card number or request another form of payment.
Trans Canceled	The transaction was canceled by pressing the cancel key on the terminal or PINpad.	No action needed.
Trans Not Allwed	The function attempted is not allowed based on the merchant profile.	<ul> <li>Update or rebuild download file to allow that feature.</li> <li>If RFID, verify parameter RFIDFL1 is set to 1=On.</li> <li>If function is not available, it can not be utilized.</li> </ul>
Transaction Failed	The transaction failed.	<ul> <li>Retry transaction.</li> <li>If error persists, request another form of payment.</li> </ul>
Trans rejected	The transaction was rejected by the host.	No action needed.
Trans Not Supported	The host supports the transaction, but has not been enabled at the terminal.	<ul> <li>Update download file to support transaction type.</li> <li>Perform a partial download.</li> </ul>
Void Not Allowed	The user tried to void an already voided transaction.	Transaction is already voided, no action needed.
Zip Match Only	Only the zip code keyed matched. The address keyed does not match.	Either accept the transaction with failed AVS or cancel the current transaction. Retry the transaction and key the correct Address.
Zip Mismatch	The zip code keyed does not match.	Either accept the transaction with failed AVS or cancel the current transaction. Retry the transaction and key the correct Zip Code.

### **COMM Server Error Messages**

Comm Server errors will display on the terminal as: TCP Send Error:XXXX, TCP Receive Error:XXXX and TCP Error:XXXX. The number of the error displays after the text.

Use the number to	determine t	the error from	the table	listed below.
	ucicilini			instea below.

Error	Explanation	Action			
1001 : VCS_ERR_MISSING _DATA	The request from SoftPay to Comm. Server has missing data.	<ul><li>Retry the transaction.</li><li>If error persists, perform a full download.</li></ul>			
1002: VCS_ERR_NO_SES SHAND	The request sent by SoftPay does not have the Session Handle specified.	<ul><li>Retry the transaction.</li><li>If error persists, perform a full download.</li></ul>			
1004: VCS_ERR_NO_MEM ORY	The Comm. Server has run out of memory and is unable to process.	<ul><li>Retry the transaction.</li><li>If error persists, perform a full download.</li></ul>			
1005: VCS_ERR_INVALID _SESS	The session handle that SoftPay has sent to the Comm. Server is not valid.	Retry the transaction.			
1007: VCS_ERR_NO_CON N_PORT	SoftPay has made a connection request and not specified the port.	<ul> <li>Retry the transaction.</li> <li>Verify the port settings</li> <li>If error persists, perform a full download.</li> </ul>			
1008: VCS_ERR_NO_CON N_URL	SoftPay has made a connection request and not specified the connection URL or IP Address.	<ul> <li>Retry the transaction.</li> <li>Verify the URL/IP settings</li> <li>If error persists, perform a full download.</li> </ul>			

Error	Explanation	Action
1009: VCS_ERR_CONN_F AILED	Comm. Server is unable to connect to the host due to: Network failure, Host is not running, Host IP Address or URL information is incorrect, the port number is incorrect, firewall is blocking network traffic, the host is unable to connect via SSL to the comm. server, user name, password, mid and tid could be wrong.	<ul> <li>Retry the transaction.</li> <li>If error persists, verify file and perform a full download.</li> </ul>
1010: VCS_ERR_NO_SEN DBUF_SIZE	SoftPay has not specified the buffer size on the send packet.	<ul><li>Retry the transaction.</li><li>If error persists, perform a full download.</li></ul>
1011: VCS_ERR_LARGE_ SEND	SoftPay has sent a data that is larger than the maximum data buffer size that SoftPay can handle.	<ul><li>Retry the transaction.</li><li>If error persists, perform a full download.</li></ul>
1012: VCS_ERR_DATA_S END	Comm. Server is unable to send data to the host. SoftPay will receive this error when there is a network failure or the host is down.	<ul> <li>Retry the transaction.</li> <li>If error persists, verify file and perform a full download.</li> </ul>
1013: VCS_ERR_NO_REC VBUF_SIZE	SoftPay has sent a data receive request to the Comm. Server but has not sent the size of the data buffer.	<ul><li>Retry the transaction.</li><li>If error persists, perform a full download.</li></ul>
1014: VCS_ERR_LARGE_ RECV	SoftPay will receive this error when the data received from the host is larger than the data buffer allocated for the session.	<ul><li>Retry the transaction.</li><li>If error persists, perform a full download.</li></ul>
1015: VCS_ERR_DATA_R ECV	Comm. Server is unable to read data from the host. SoftPay will receive this error if there is a network failure or the host is down.	<ul> <li>Retry the transaction.</li> <li>If error persists, verify file and perform a full download.</li> </ul>

## **Communication Processing Messages**

Dial

Error	Explanation	Action		
Carrier Time-out	The modem timed out before detecting a carrier.	<ul> <li>Retry transaction.</li> <li>Verify phone cord is connected and has a dial tone.</li> <li>Change auth/settlement numbers in terminal.</li> </ul>		
Comm Error	There is a problem connecting to the host.	<ul> <li>Retry transaction.</li> <li>Verify phone cord is connected and has a dial tone.</li> <li>Change auth/settlement numbers in terminal.</li> </ul>		
Host link fail	The terminal is unable to connect to the host.	<ul> <li>Retry transaction.</li> <li>Verify phone cord is connected and has a dial tone.</li> <li>Change auth/settlement numbers in terminal.</li> </ul>		
Line Busy	Occurs when the host number is busy or when there is no number in the auth/settlement fields in the terminal.	<ul> <li>Retry transaction.</li> <li>Verify phone cord is connected and has a dial tone.</li> <li>Change auth/settlement numbers in terminal.</li> </ul>		
Link close fail	The terminal can't close the modem link.	Escalate to TPS.		
Lost Carrier	The carrier is lost.	<ul> <li>Retry transaction.</li> <li>Verify phone cord is connected and has a dial tone.</li> <li>Change auth/settlement numbers in terminal.</li> </ul>		
No Answer	Host is not answering. The line may not be available, is busy or the terminal may be dialing the wrong number.	<ul> <li>Retry transaction.</li> <li>Verify phone cord is connected and has a dial tone.</li> <li>Change auth/settlement numbers in terminal.</li> <li>Verify PABX is present if needed.</li> <li>Verify download phone number.</li> </ul>		

Error	Explanation	Action		
No Host Response	The terminal did not receive expected data (ENQ) from the host.	<ul> <li>Retry transaction.</li> <li>Verify phone cord is connected and has a dial tone.</li> <li>Change auth/settlement numbers in terminal.</li> <li>Verify PABX is present if needed.</li> <li>Verify download phone number.</li> </ul>		
No Line	Download has failed because the terminal does not recognize a working phone line.	<ul> <li>Verify phone cord is connected and has a dial tone.</li> <li>Verify PABX is present if needed.</li> <li>Verify download phone number.</li> </ul>		
Phone Num Flds Empty	The Primary and Secondary Authorization and settlement phone number fields are blank.	<ul> <li>Update download file with correct auth/settlement numbers.</li> <li>Perform a partial download.</li> </ul>		
Pls Dnld Comm Server	The terminal is attempting to process via the Ethernet port but does not have the COMM Server application programmed.	Add the VMAC/Comm Server application to the download file and perform a partial download to GID 1. If processing via dial, verify dial settings in dl file.		
WRITE COMM FAIL	The terminal is attempting to dial at a baud rate that the terminal hardware is not capable of using. This error occurs only when attempting to download.	If the terminal uses a 14.4 baud modem, verify that the baud rate is set correctly. Reference chapter 5. Retry download.

Error	Explanation	Action
514 Call Helpdesk	The PNS number/Merchant ID is not a known NetConnect MID.	<ul> <li>Use the NetConnect Tool to verify the MID, TID, username and password setup with the equivalent parameters in the download file. If incorrect, update and perform a partial download.</li> <li>Verify that the username and password are between 8-32 characters including a number. Special characters _ and - are permitted.</li> <li>Verify that the NetConnect URL's in the download file are correct. If incorrect, update and perform a partial download.</li> <li>Verify that NetConnect is up by going to this URL https://netconnect1.paymentech.net/NetConnect/controlle r from your browser. If "Get Not Supported by the NetConnect Gateway" displays on your browser then the NetConnect application is running.</li> <li>If the error persists, use the appropriate procedures to escalate a NetConnect issue.</li> </ul>
515 Call Helpdesk	Indicates that NetConnect is up but is unable to establish or maintain connection to the host.	<ul> <li>Retry the transaction, waiting at least 90 seconds for an authorization or 5 minutes for an upload.</li> <li>If the error persists, use the appropriate procedures to escalate a NetConnect issue.</li> </ul>
516 Call Helpdesk	NetConnect has experienced an internal error.	<ul> <li>Retry the transaction, waiting at least 90 seconds for an authorization or 5 minutes for an upload.</li> <li>If the error persists, use the appropriate procedures to escalate a NetConnect issue.</li> </ul>
517 Call Helpdesk	NetConnect is functioning, but the host is not returning a response.	<ul> <li>Verify the transaction is present on Tandem. If so, there is potential problem with the communication between Tandem and NetConnect.</li> <li>Retry the transaction, if it is duplicated, void one of the transactions.</li> <li>Retry the transaction, waiting at least 90 seconds for an authorization or 5 minutes for an upload.</li> <li>Verify if this error is received with one card type or all card types. There could be a potential authorization network problem.</li> <li>If the error persists, use the appropriate procedures to escalate a NetConnect issue.</li> </ul>
518 Call Helpdesk	NetConnect established a connection and submitted the request but did not receive a response from the host in the timeout window.	<ul> <li>Verify that the entire batch was received on Tandem.</li> <li>Retry the settlement/deposit waiting at least 5 minutes. If the batch is duplicated, follow procedures to release from suspense.</li> <li>If the error persists, use the appropriate procedures to escalate a NetConnect issue.</li> </ul>

Error	Explanation	Action				
519 Call Helpdesk	The merchant number and/or TID passed in the MIME header did not match the merchant number and/or TID in the NetConnect Authentication tool.	<ul> <li>Use the NetConnect Tool to verify the MID, TID, username and password setup with the equivalent parameters in the download file. If incorrect, update and perform a partial download.</li> <li>Verify that the username and password are between 8-32 characters including a number. Special characters _ and - are permitted.</li> <li>Verify that the NetConnect URL's in the download file are correct. If incorrect, update and perform a partial download.</li> <li>Verify that NetConnect is up by going to this URL https://netconnect1.paymentech.net/NetConnect/controlle r from your browser. If "Get Not Supported by the NetConnect Gateway" displays on your browser then the NetConnect application is running.</li> <li>If the error persists, use the appropriate procedures to escalate a NetConnect issue.</li> </ul>				
Host Conn Err: 2548	The merchant profile does not contain the NetConnect URL.	<ul> <li>Verify that the NetConnect URL's in the download file are correct. If incorrect, update and perform a partial download.</li> <li>Verify that NetConnect is up by going to this URL https://netconnect1.paymentech.net/NetConnect/controlle r from your browser. If "Get Not Supported by the NetConnect Gateway" displays on your browser then the NetConnect application is running.</li> <li>If the error persists, use the appropriate procedures to escalate a NetConnect issue.</li> </ul>				
Host Conn Err: 2574	The CAT5 cable is not connected or not connected properly.	• Verify that the CAT5 cable is connected securely to the terminal and to the router (Chapter 2).				
Host Conn Err: 2707	This indicates that NetConnect is up but is unable to establish or maintain a socket connection to the host.	<ul> <li>Use the NetConnect Tool to verify the MID, TID, username and password setup with the equivalent parameters in the download file. If incorrect, update and perform a partial download.</li> <li>Verify that the username and password are between 8-32 characters including a number. Special characters _ and – are permitted.</li> <li>Verify that the NetConnect URL's in the download file are correct. If incorrect, update and perform a partial download.</li> <li>Verify that NetConnect is up by going to this URL https://netconnect1.paymentech.net/NetConnect/controlle r from your browser. If "Get Not Supported by the NetConnect Gateway" displays on your browser then the NetConnect application is running.</li> <li>If the merchant is using a NetGear router model RP614v2, this is not supported using Static IP. If static is being used, ask the merchant to reconfigure the router to use DHCP and change the download.</li> <li>If the error persists, use the appropriate procedures to escalate a NetConnect issue.</li> </ul>				
Host Conn Err: 2708 or 2709	This indicates that NetConnect is up but is unable to establish or maintain a socket	If the merchant is using a NetGear router model     RP614v2, this is not supported using Static IP If				
	connection to the host.	static is being used, ask the merchant to reconfigure the router to use DHCP and change the download file to DHCP and perform a partial download.				

Error	Explanation	Action
Host Conn Err: 2901	No IP was assigned to the terminal when the merchant profile is setup for DHCP.	<ul> <li>Ask merchant to verify that the router connected to the terminal is configured for DHCP.</li> <li>Verify the download file has DHCP enabled and perform a partial if necessary.</li> <li>Recycle the power to the router and then the terminal to attempt to get an IP address from the router.</li> </ul>
Host Conn Err: 3729	The Date and Time in the terminal is incorrect	<ul> <li>Correct the date and time in the terminal (chapter 6).</li> <li>If the error persists, use the appropriate procedures to escalate a NetConnect issue.</li> </ul>
TCP Receive Error 0	This indicates that NetConnect is up but is unable to establish or maintain a socket connection to the host.	<ul> <li>If the merchant is using a NetGear router model RP614v2, this is not supported using Static IP. If static is being used, ask the merchant to reconfigure the router to use DHCP and change the download file to DHCP and perform a partial download.</li> </ul>
