General Description

Thank you for purchasing the Time2 HSIP2 Surveillance Camera – this device is a great way monitor any part of your office, home or warehouse making sure all your valuables are safe and secure

Please keep this manual for future reference and ensure all safety instructions have been read carefully before using. Applications and their functions may vary by country and/or hardware specification.

Important Safety Information

- Do not install the product outdoors or in any place where it may become wet. Do not install the product in any place that might be exposed to extreme heat or cold – the camera should be kept out of direct sunlight
- It is not permitted to open the product yourself or to have it opened, neither is it permitted to repair the product yourself or to have it repaired. This will void the warranties.
- Only use original accessories from the manufacturer
- Keep the product out of reach of children
- Disconnect the device from all power sources before cleaning it. Use a clean, dry cloth to clean the product
- Do not use any abrasive agents, corrosive cleaning products or any substances that contain bleach or solvents to clean the product
- Remove the adapter from the power outlet during storms, lightning and whenever the product will not be used for a longer period of time
- The camera is not able to view through glass at night. Keep this in mind when positioning it

Main Components (What comes in the box?)

- HSIP2 HD IP Camera
- WiFi Antenna
- Ethernet (internet) cable
- DC supply (power supply)
- Wall Mounting brackets
- User manual

Camera Features

1. Wireless Antenna
2. Motion Detector
3. Infrared LED
4. Camera Lens
5. Network Indicator LED
6. Microphone
7. Loud Speaker

1. Headphone Slot
2. Ethernet / RJ45 Port
3. WiFi Antenna
4. Micro SD Card Slot
5. Power Port

Connecting the Camera

1. Screw the WiFi Antenna into gold screw at the back of the camera
2. Plug the power adaptor into the port at the back of the camera
3. Plug one end of the Network/Ethernet cable into camera and the other end into your Wireless Internet Router. It will take approximately 30 seconds for the camera to power up.
4. Once the power cable and Ethernet cable have been connected, the green LED light will come on.

Device Client

Installing the PC Client

Visit the following webpage – www.time2technology.com to download the “IP Camera for PC” software. (Click to download)

TIME2

Welcome to Time2

Our Website is coming soon. In the meantime, please visit our shop by clicking the link below...

Looking for product downloads?

Bluetooth

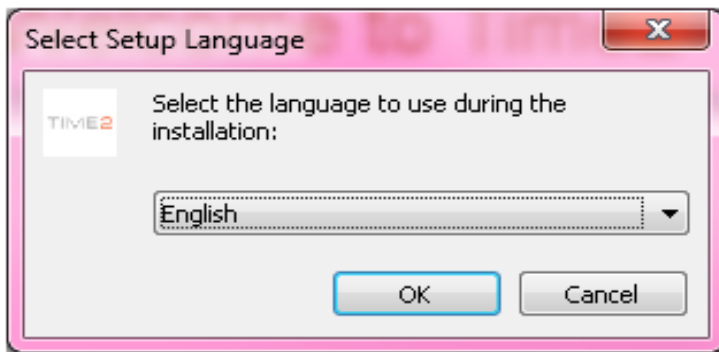

WiFi

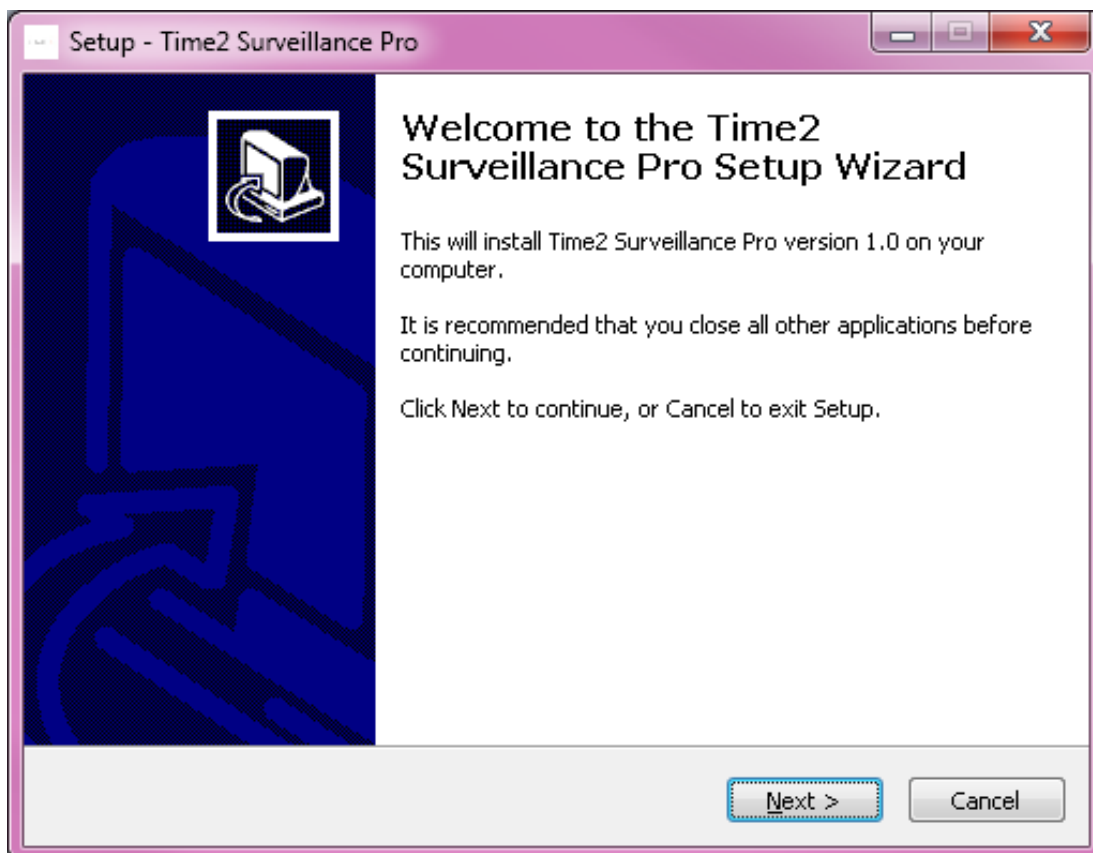

Bluetooth Waterproof

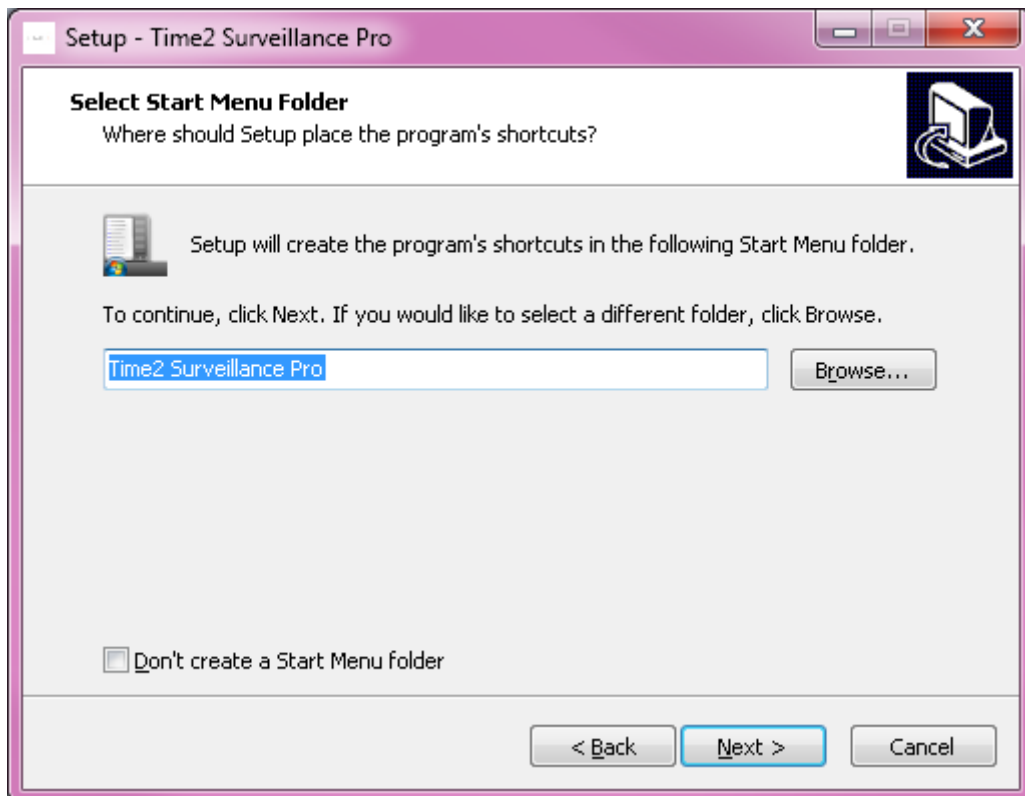

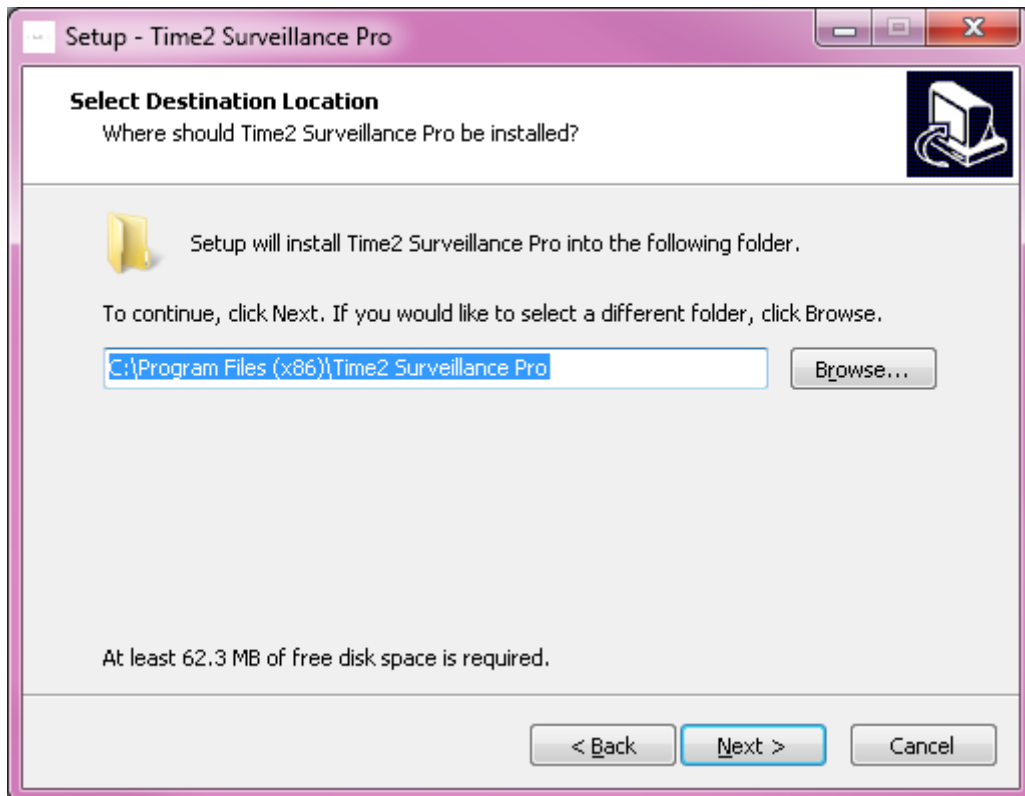

During download, your Anti-virus software may bring up an alert, please ignore it and continue to download the software. Once the software has downloaded, double click on the software icon to open.

You will then be asked to choose a language:

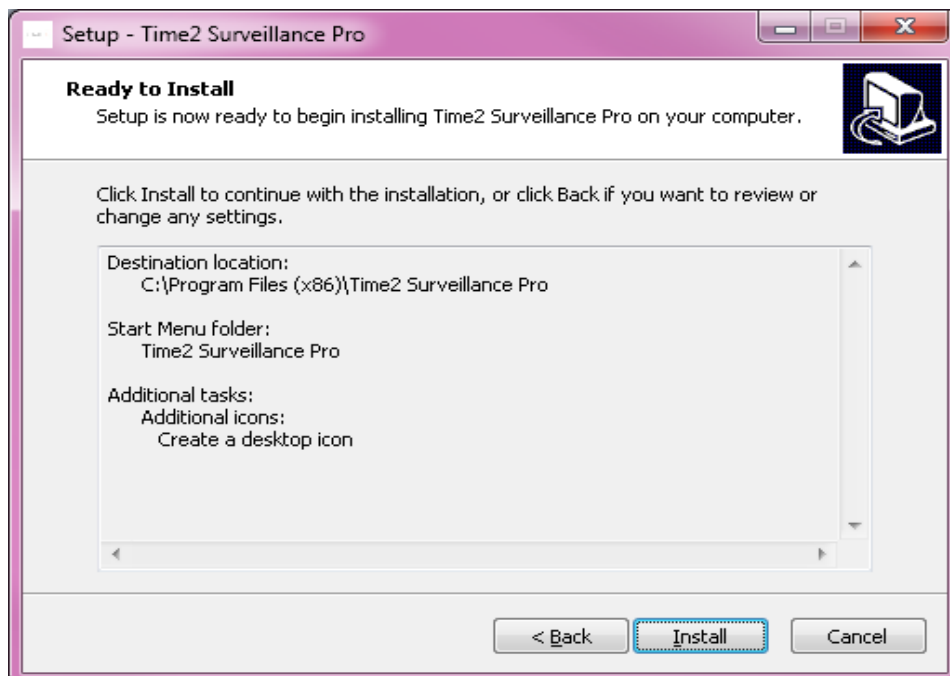

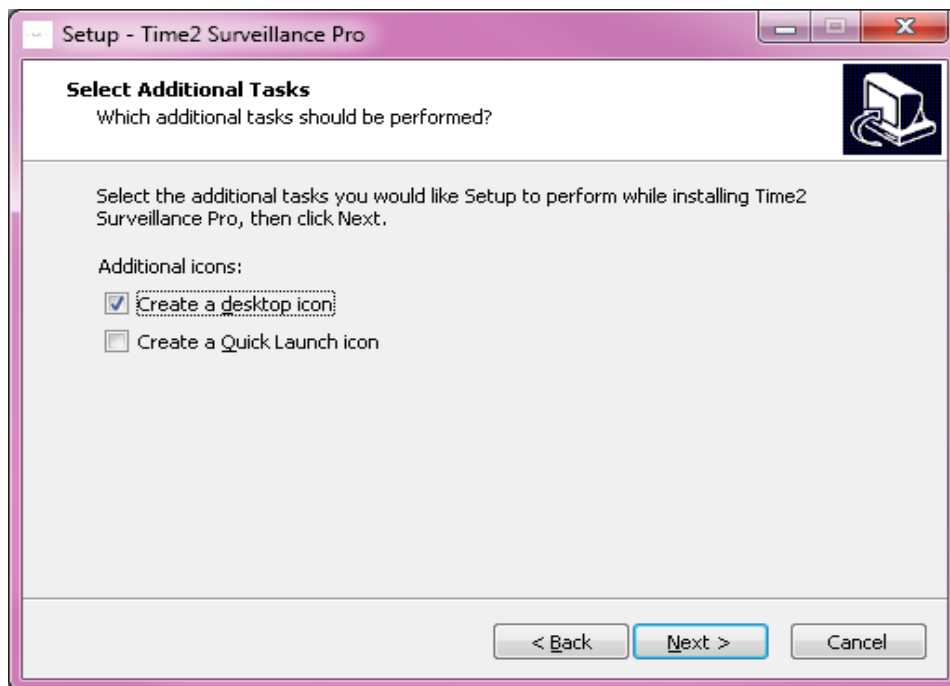

Follow the onscreen instructions to finish installation of the DeviceClient Software (See below).

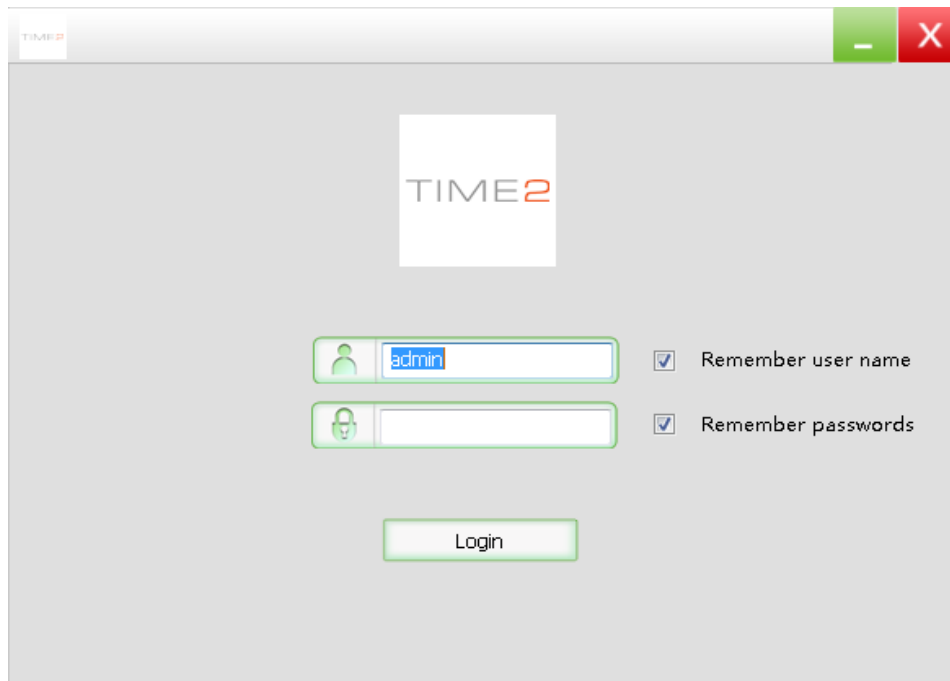

Please ensure the 'Create a desktop icon' option is ticked (see below) so an icon can be created on your desktop for easy access to the software.

Once the software has been successfully installed, double-click the icon to launch.

Camera Setup

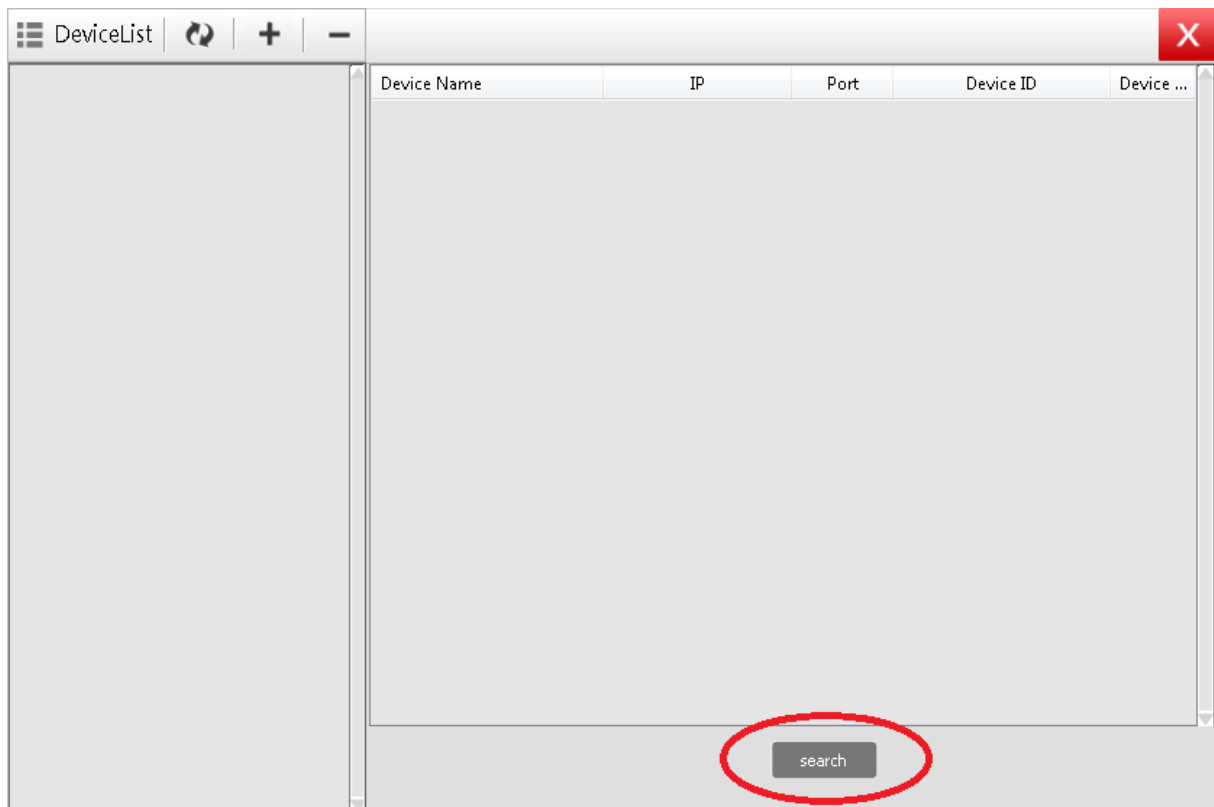

By default, there is no password allocated to the camera. To log in, simply enter the username (found at the bottom of the camera) then click Login.

In order to set up the software, firstly, ensure the camera and computer are connected to the same Wireless Internet Router.

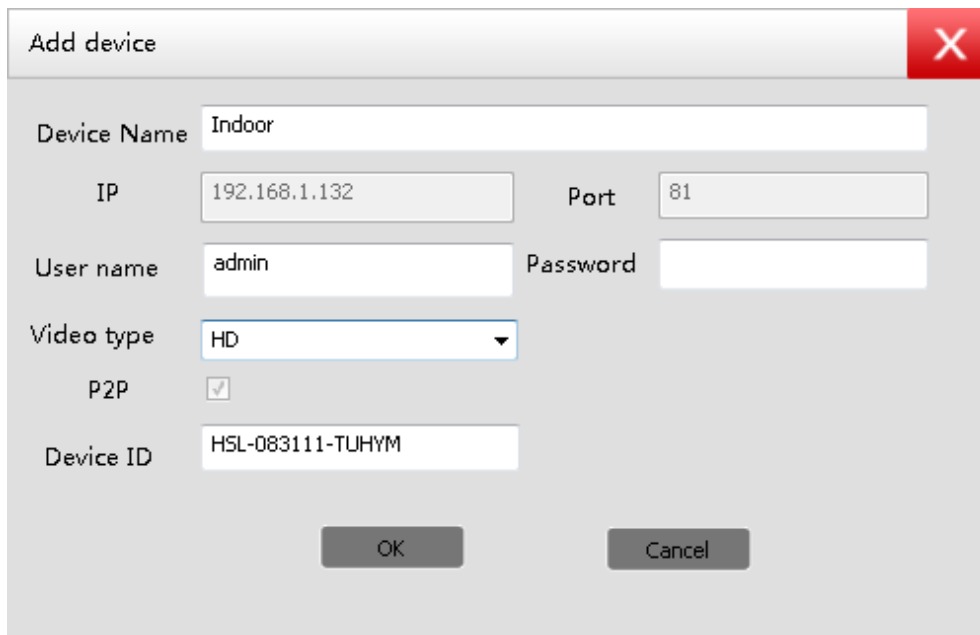

Click the 'Plus' icon on the top right-hand corner of the screen. This will bring up another window, then click 'Search'.

This will bring up any cameras connected to that Wireless internet network. Then simply double-click on the Camera you would like to setup.

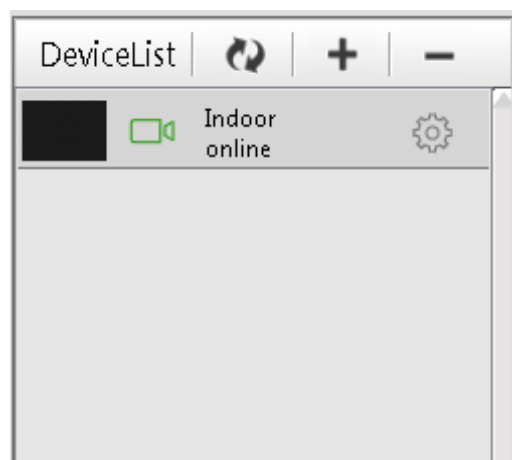

This will bring up another window (see below). Check the Settings then click OK to add the camera to the Device List.

- *The default device name can be changed to whatever you prefer*
- *The Username and Password can be found at the bottom of your camera.*
- *Each camera will have its own unique Device ID*

In order to view the camera, simply put your mouse over the camera name in the Device List (see image)

Then drag it into one of the black windows for the image to appear. Double-click on the image to enlarge.

Main Features

To view the main functions, simple click on the settings icon on the Device.

Device Information

This gives you all the information about the device. e.g. Firmware version, serial number, Alarm status, SD card capacity etc.

name	Indoor
firmware version	R35.9.9.1.1
serial number	HSL-083111-TUHYM
alarm status	none
UPNP status	UPNP succeeded
DDNS status	no action
MAC	00:c3:ea:ba:2a:ae

Date and Time

Set the Date and Time according to your Time Zone or simply synchronise to your PC time.

Device Time 2015-07-14 15:11:58 Tuesday

Motion Detect Armed

Whilst the camera is on, if any movement is detected, the built-in motion detector will trigger an alarm. Tick the ‘Motion Detect Armed’ option to activate this feature.

Alarm Audio Sensibility

Whilst the camera is on, if any sound is detected, this will also trigger the alarm. You are able to change the sensitivity of this feature according to your requirement.

Alarm video record

When the alarm has been triggered, a 30-second video will be recorded and saved onto the Micro SD Card

Mail Notification after alarm

Activate this feature to receive an email notification as soon as the alarm has been triggered (by motion detection or audio alarm). You will be required to set up your mailbox in order to receive the emails.

Upload Image after alarm

Activate this feature to receive images once the motion detection alarm has been triggered. You can choose for up to 10 images to be emailed to yourself.

Alarm armed time

Activate this feature to schedule when the alarm setting is on. Alternatively, you could have the alarm setting on all the time.

WiFi Settings

The Wireless Settings can be set and changed by clicking on this tab. Please note: when setting the camera up for the first time, it will need to be wired into the internet router first, before the wireless function is activated.

Click 'Scan' to search for existing wireless networks then select the network you would like to connect to. Enter the password then click 'Setup'. The camera will automatically configure itself with the router.

This function is used to setup the wireless function. The device will restart once the settings have been configured. You can then unplug the Ethernet Cable from the wireless router to test whether the camera works remotely.

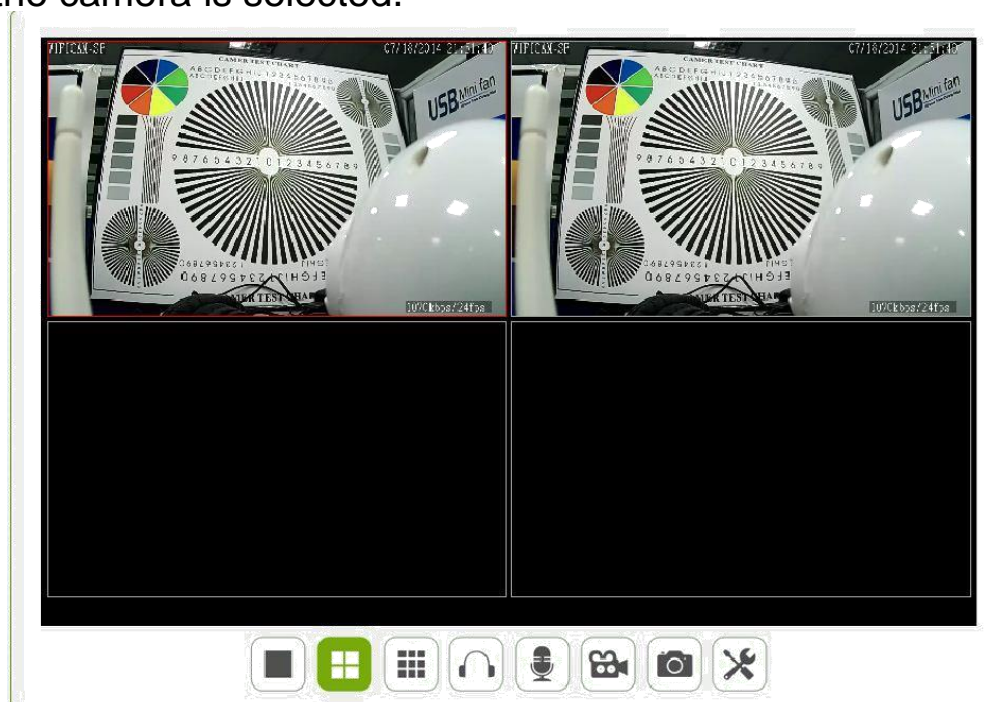

User & Device

Multi-Device Settings

The software can manage up to 9 different cameras at a time.

Device List in Lan	HSL-ZJ-1(192.168.1.176) WIFICAM(192.168.1.105) 勿修改(192.168.1.178)
	<input type="button" value="Refresh"/>
The 1st Device	This Device
The 2nd Device	None
Alias	<input type="text" value="WIFICAM"/>
Host	<input type="text" value="192.168.1.105"/>
Http Port	<input type="text" value="80"/>
User	<input type="text" value="admin"/>
Password	<input type="password"/>
	<input type="button" value="Add"/> <input type="button" value="Remove"/>
The 3rd Device	None

To add another camera, click 'The 2nd Camera' and search the WiFi network for the camera, the information will automatically be filled in once the camera is selected.

iOS Application

Downloading the App

In order to download the iOS application, go to the Apple App Store on your iPhone/iPad.

Search **Time2 Surveillance Pro** then download and install the App.

Once the App has been installed onto your iPhone/iPad, a shortcut icon will appear on your App list. Simply click to open.

Camera Setup

In order to setup your camera onto your iPhone/iPad, click 'Add device' on the App interface.

The screenshot shows the 'Add device' screen in an application. At the top, there is a dark header with a back arrow, the text 'Add device', and a 'Done' button. Below the header is a section titled 'TYPE IN DEVICE INFORMATION'. This section contains several input fields: 'Device name' with the value 'WIFICAM', 'Device type' set to 'Camera', 'Device ID' with a placeholder 'Please type in ID nu...', 'User name' with the value 'admin', and 'Password' with a placeholder 'Please type in pass...'. Below this section are four options: 'Scan QR code', 'LAN search', and 'One key to add device'. Annotations with arrows point to the 'Device name' field (labeled 'Rename your device'), the 'Device ID' field (labeled 'Add the Camera by scanning the code found at the bottom of the camera.'), and the 'Scan QR code' option (labeled 'Add the Camera by scanning the available WiFi network'). Another annotation points to the 'Device name' field with the text 'Enter the Cameras username and password (found at the bottom of the camera)'.

Scanning device two-dimensional code

Simply scan the code found at the bottom of the camera in order for the App to recognise it.

Scanning the code will automatically fill in the Cameras ID and will allow you to control the camera.

Search device in LAN

This will allow the iPhone/iPad to search the WiFi network that it is connected to and detect any Cameras that are also connected to the same WiFi network.

Simply click onto the camera you would like to connect to, the Camera details will be automatically filled in and the camera will be ready to control.

Camera Controls

Once the camera has been added to the Device list, simply click on the device to view.

Settings

To view the Settings, simply click on the settings icon on the Device.

Wi-Fi Setting

The Wireless Settings can be set and changed by clicking on this tab. Please note: when setting the camera up for the first time, it will need to be wired into the internet router first, before the wireless function is activated.

Click 'Manage Wi-Fi network' to search for existing wireless networks then select the network you would like to connect to.

Enter the password then click 'Done'. The camera will automatically configure itself with the router.

This function is used to setup the wireless function. The device will restart once the settings have been configured. You can then unplug the Ethernet Cable from the wireless router to test whether the camera works remotely.

User Setting

The username and password for the Operator and Administrator can be set and changed by clicking on this tab.

The screenshot shows the 'User setting' screen with a dark header containing a back arrow, the title 'User setting', and a 'Done' button. Below the header, there are two sections: 'ADMINISTRATOR' and 'OPERATOR'. Each section has a 'User name' field, a 'Password' field, and a 'Show password' toggle switch. The Administrator section has 'admin' in the username field and an empty password field. The Operator section has 'op' in the username field and four dots in the password field. Both 'Show password' toggles are currently turned off.

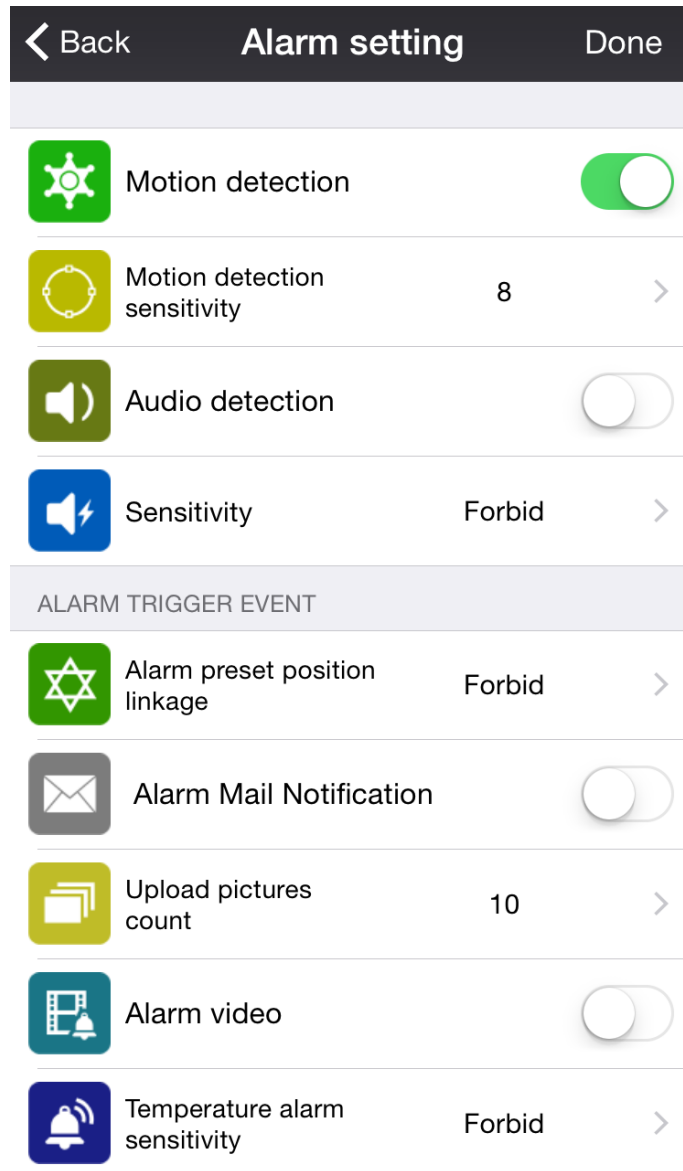

Device Time Setting

Set the Date and Time according to your Time Zone or simply synchronise to your Mobile Phone time.

The screenshot shows the 'Device time setting' screen with a dark header containing a back arrow, the title 'Device time setting', and a 'Done' button. Below the header, there are four settings: 'Device time' (2015-07-16 18:53:22), 'Time zone' ((GMT) Greenwich mean ti... with a right arrow), 'Use NTP Server Auto Correct' (toggle switch), and 'NTP Server' (right arrow). At the bottom, there is a blue button labeled 'Mobile phone time calibration'.

Alarm Settings

The motion detection alarm and settings can be amended and changed by clicking on this tab.

Motion Detect Armed

Whilst the camera is on, if any movement is detected, the built-in motion detector will trigger an alarm. Tick the 'Motion Detect Armed' option to activate this feature.

Motion Detect Sensibility

Click to adjust the sensitivity of motion detection

Alarmed Mail Notification

Activate this feature to receive an email notification as soon as the alarm has been triggered (by motion detection or audio alarm). You will be required to set up your mailbox in order to receive the emails.

Alarmed Record

When the alarm has been triggered, a 30-second video will be recorded and saved onto the Micro SD Card

Upload Image on alarm

Activate this feature to receive images once the motion detection alarm has been triggered. You can choose for up to 10 images to be emailed to yourself.

Email Settings

Setup your mailbox to receive email notifications when motion has been detected.

SD Card Settings

This gives you all the information about the device. e.g. Firmware version, serial number, Alarm status, SD card capacity etc.

When first inserting an SD Card, you will be required to format the SD card (simply click the format button). Once formatted, you will be able to select conditions such as 'Record audio' or 'Timer recording' etc.

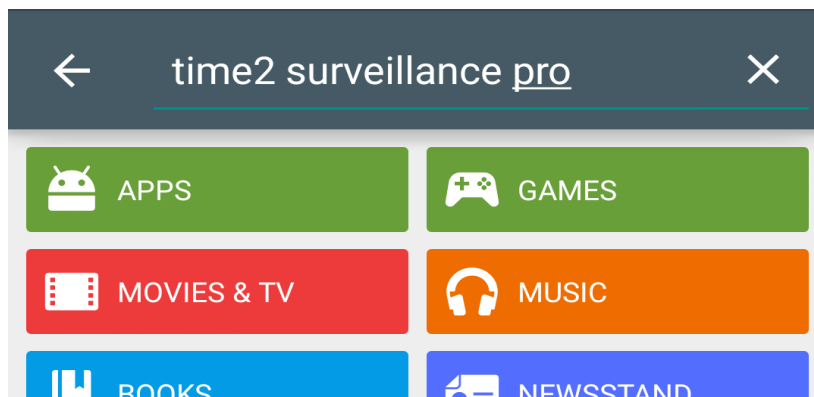

Alternatively, you could specify the times you would like the camera to start recording. Once complete, click the Set button to save the changes.

Android Application

Downloading the App

In order to download the Android application, go to the Google Playstore on your Android device.

Search **Time2 Surveillance Pro** then download and install the App.

Once the App has been installed onto your Android device, a shortcut icon will appear on your App list. Simply click to open.

Camera Setup

In order to setup your camera onto your Android device, click 'Add device' on the App interface.

Enter the Cameras username and password (found at the bottom of the camera)

Rename your device

Add the Camera by scanning the available WiFi network

Add the Camera by scanning the code found at the bottom of the camera.

Scanning device two-dimensional code

Simply scan the code found at the bottom of the camera in order for the App to recognise it.

Scanning the code will automatically fill in the Cameras ID and will allow you to control the camera.

Search device in LAN

This will allow the Android device to search the WiFi network that it is connected to and detect any Cameras that are also connected to the same WiFi network.

Simply click onto the camera you would like to connect to, the Camera details will be automatically filled in and the camera will be ready to control.

Camera Controls

Once the camera has been added to the Device list, simply click on the device to view.

Settings

To view the Settings, simply click on the settings icon on the Device.

Wi-Fi Setting

The Wireless Settings can be set and changed by clicking on this tab. Please note: when setting the camera up for the first time, it will need to be wired into the internet router first, before the wireless function is activated.

Back Wi-Fi Setting Done

Device Status

BTHub5-XNPF

Wifi Safe WPA2_PSK(AES)

Channel: 1

WiFi Manager >

Local WiFi Manager >

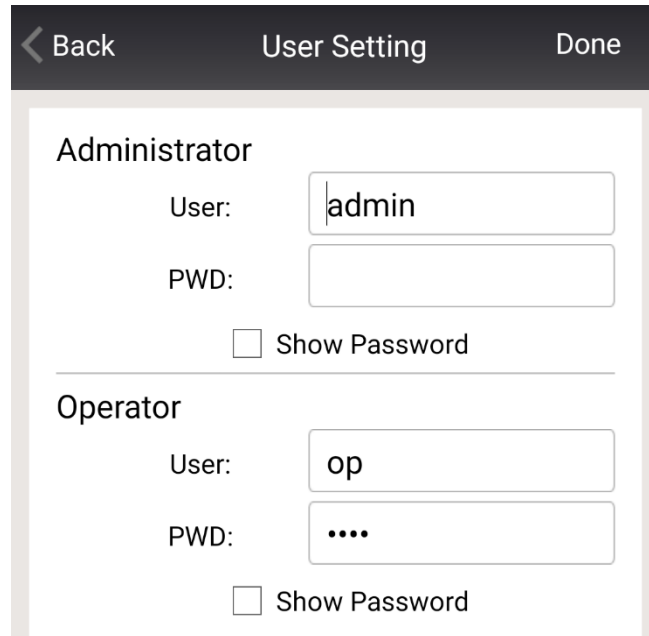

Click 'WiFi Manager' or 'Local WiFi Manager' to search for existing wireless networks then select the network you would like to connect to.

Enter the password then click 'Done'. The camera will automatically configure itself with the router.

This function is used to setup the wireless function. The device will restart once the settings have been configured. You can then unplug the Ethernet Cable from the wireless router to test whether the camera works remotely.

User Setting

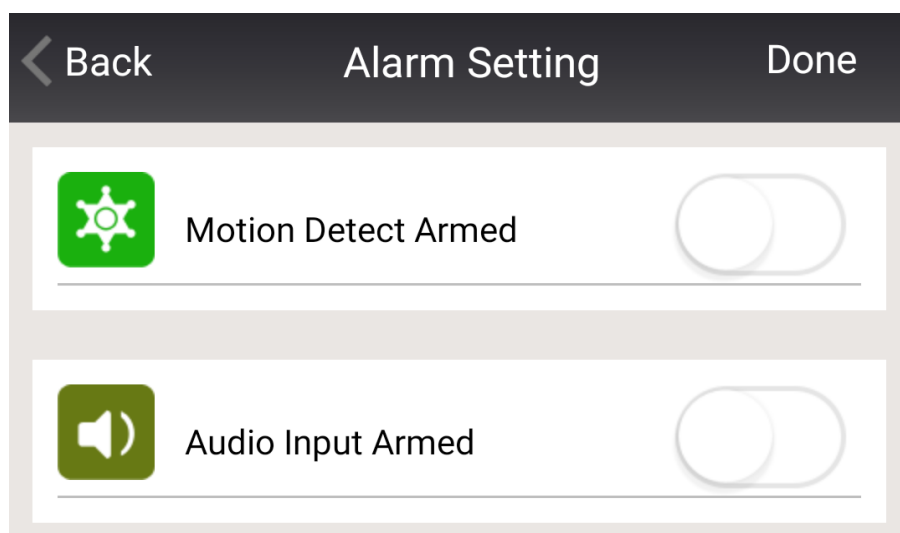

The username and password for the Operator and Administrator can be set and changed by clicking on this tab.

The screenshot shows a mobile application interface for 'User Setting'. At the top, there is a dark header bar with a back arrow, the title 'User Setting', and a 'Done' button. Below the header, the interface is divided into two sections: 'Administrator' and 'Operator'. Each section contains a 'User:' label followed by a text input field, and a 'PWD:' label followed by a password input field. The Administrator's User field contains the text 'admin'. Below the password fields, there is a checkbox labeled 'Show Password' which is currently unchecked. A horizontal line separates the Administrator and Operator sections.

Alarm Settings

The motion detection alarm and settings can be amended and changed by clicking on this tab.

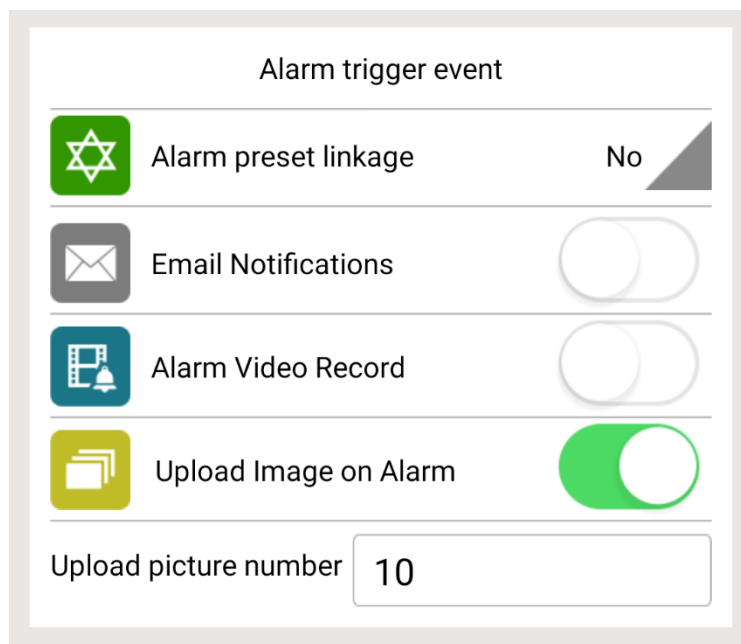

The screenshot shows a mobile application interface for 'Alarm Setting'. At the top, there is a dark header bar with a back arrow, the title 'Alarm Setting', and a 'Done' button. Below the header, there are two rows of settings. Each row consists of a green icon on the left, a text label in the middle, and a toggle switch on the right. The first row has a gear icon, the label 'Motion Detect Armed', and a toggle switch that is currently turned off. The second row has a speaker icon, the label 'Audio Input Armed', and a toggle switch that is also currently turned off.

Motion Detect Armed

Whilst the camera is on, if any movement is detected, the built-in motion detector will trigger an alarm. Tick the 'Motion Detect Armed' option to activate this feature.

Once activated the following options appear.

Motion Detect Sensibility

Click to adjust the sensitivity of motion detection

Alarmed Mail Notification

Activate this feature to receive an email notification as soon as the alarm has been triggered (by motion detection or audio alarm). You will be required to set up your mailbox in order to receive the emails.

Alarmed Record

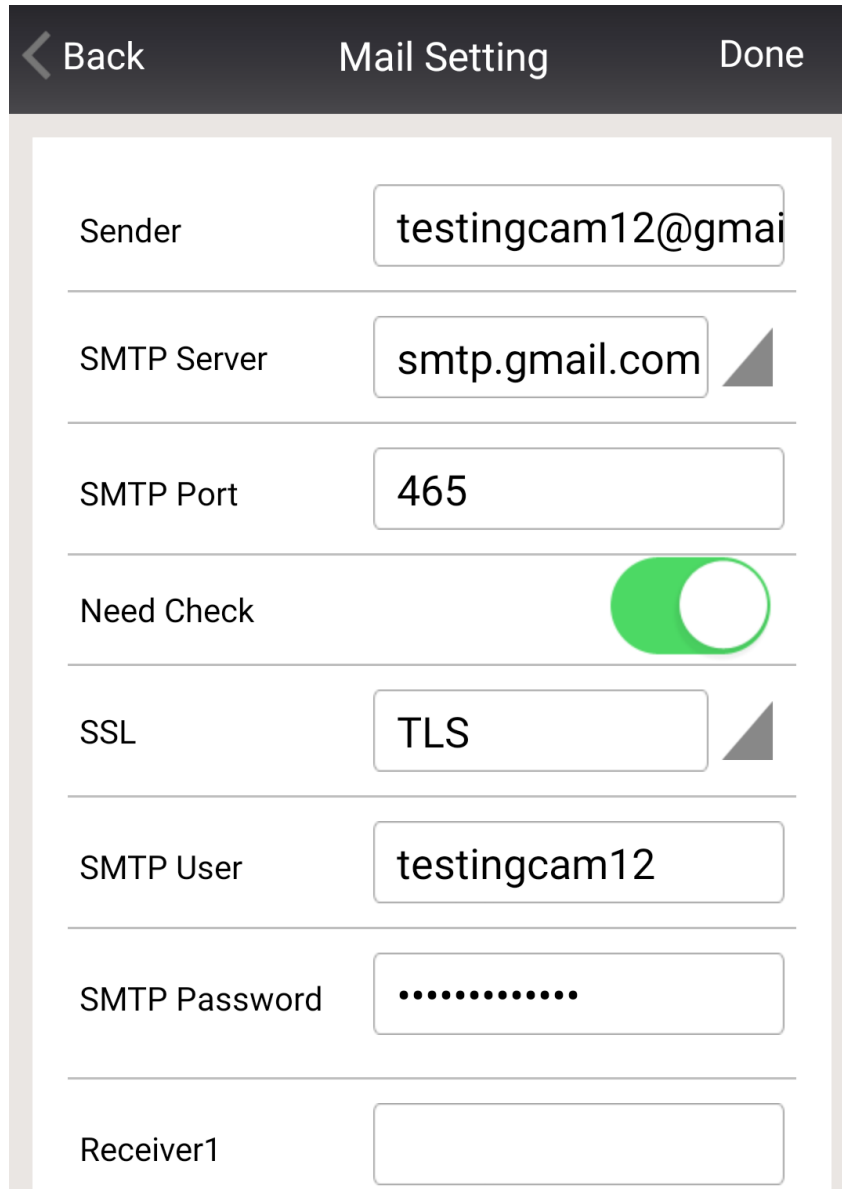

When the alarm has been triggered, a 30-second video will be recorded and saved onto the Micro SD Card

Upload Image on alarm

Activate this feature to receive images once the motion detection alarm has been triggered. You can choose for up to 10 images to be emailed to yourself.

Mail Settings

Setup your mailbox to receive email notifications when motion has been detected.

Sender	testingcam12@gmail.com
SMTP Server	smtp.gmail.com
SMTP Port	465
Need Check	<input checked="" type="checkbox"/>
SSL	TLS
SMTP User	testingcam12
SMTP Password
Receiver1	

Sender

Enter the senders email address e.g. testingcam12@gmail.com

SMTP Server

Select the appropriate SMTP server according to your email address (see above)

SMTP Port

This will be automatically filled in once the server has been selected

Need Check

Please ensure this is always ticked as some mail servers require authentication to receive emails

SMTP Details

Please enter the correct SMTP Username (email address) and SMTP password (password used for the email address).

Receiver

Finally enter the email addresses you would like the email notifications to go to

Once the details have been entered correctly, click the 'Test' button to send a test email.

Please note: The camera needs to be connected to the internet at all times for this feature to work.

SD Card Settings

This gives you all the information about the device. e.g. Firmware version, serial number, Alarm status, SD card capacity etc.

When first inserting an SD Card, you will be required to format the SD card (simply click the format button). Once formatted, you will be able to select conditions such as 'Record audio' or 'Timer recording' etc.

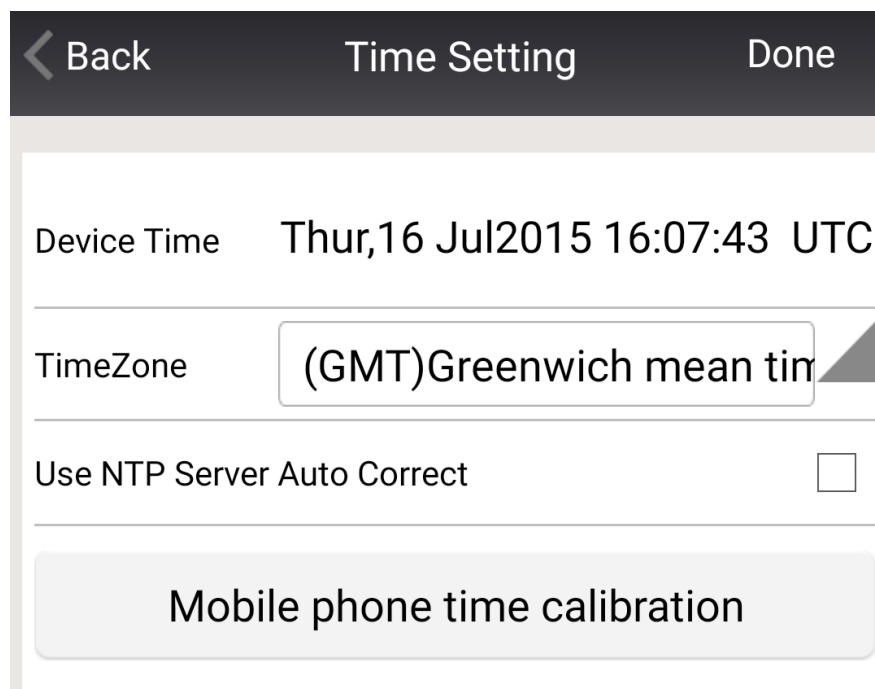

Alternatively, you could specify the times you would like the camera to start recording. Once complete, click the Set button to save the changes.

Alias Setting

This allows you to add or change the Camera name

Date and Time

Set the Date and Time according to your Time Zone or simply synchronise to your Mobile Phone time.

The screenshot shows a mobile application interface for 'Time Setting'. At the top, there is a dark header bar with a back arrow, the text 'Time Setting', and a 'Done' button. Below the header, the 'Device Time' is displayed as 'Thur, 16 Jul 2015 16:07:43 UTC'. The 'TimeZone' is set to '(GMT)Greenwich mean time', shown in a dropdown menu. There is a checkbox for 'Use NTP Server Auto Correct' which is currently unchecked. At the bottom, there is a large, light gray button labeled 'Mobile phone time calibration'.
