1. Overview

1.1 Extension overview

Product Return extension for Magento is designed to manage Product return requests and ensure tracking.

Customer can submit a new request, follow Product return progress and print Product return form.

1.2 Processes

Regarding order cancel, process stops after products delivered : you can then create a credit memo to refund customer.

2. Integration

2.1 Module integration

This extension is compliant with Magento 1.3.2.4

To install extension, process the following steps:

Description	Source	Target
Code directory	App/code/local/MDN/ProductReturn	App/code/local/MDN
Design admin (layout)	App/Design/adminhtml/default/default/layout/ProductReturn.xml	App/Design/adminhtml/default/default/layout
Design admin (template)	App/Design/adminhtml/default/default/template/ProductReturn	App/Design/adminhtml/default/default/template
Design frontend (layout)	App/Design/frontend/default/default/layout/ProductReturn.xml	App/Design/frontend/default/default/layout
Design frontend (template)	App/Design/frontend/default/default/template/ProductReturn	App/Design/frontend/default/default/template
Declaration file	App/Etc/modules/MDN_ProductReturn.xml	App/Etc/modules/
Translation files	app/locale/fr_FR/ProductReturn.csv	app/locale/fr_FR/

Once all files are copied, go back into Magento back office, refresh cache from system > cache management.

2.2 Magento Upgrade

This extension follows Magento best practice, it means that it doesn't modify any core files so you can benefit and install Magento new releases. However, it's advised to make some test on "test server" before install it on a production server.

2.4 Settings

Note : it is important to set Product Return parameters before using Product Return Extension.

You can edit Product Return settings from magento Back Office, menu system > configuration > Product return.

Settings :

- **Default validity duration** : set the default validity duration for a Product Return (in days)
- **Allow Customer Product Return Request** : If enabled, customer can request for product return from its account

Next, you have to set parameters for email. For each product return status matches an email template. You can edit email template from Magento backoffice, menu system > email template.

- **Email new request** : Each time a customer submit a product return request, an email is sent to this address
- **Copy to** : all emails sent from Product Return extension will be also sent to this address.
- **Email sender** : Identity to use for emails.
- **Template product return refused** : Email sent to customer if its Product return request is refused.
- **Template product return accepted** : Email sent to customer if its Product return request is accepted
- **Template products received**: Email sent to customer once its products have been delivered.
- **Template products received but refused**: Email sent to customer when products have been delivered but package is refused.
- **Template expertise products** : Email sent to customer when products are being verified by after sale service
- **Template Complete**: Email sent to customer when Product Return is complete.

Product Return Extension enable to create an order to process Product return result. This is usefull to manage Product Return in logistic process or bill fees to the customer.

Created order can contain products but also additional fees (such as technical fees). TO manage those fees, you have to create a “fake product” that will be used in that orders.

Create this fake product using this settings :

- Enabled
- Tax class: standard class
- Visibility : nowhere
- Price : 0
- Stock management : no
- Websites: all

Once this product is created, you have to fill its ID in fake product_id field in system > configuration > Product return

You can also define setting for PDF printing:

- **Company address**
- **PDF header text:** text displayed in the PDF header
- **PDF Footer text :** text displayed in the PDF footer.
- **PDF comments :** text displayed at the bottom of the PDF

When a Product Return is accepted, Customer has to print form and return products with this form. However, before printing form, he has to accept Product Return Commitments by checking a checkbox.

You can fill Product Return Terms and Commitments content from magento back office, in menu CMS > Static Block and then edit block with `cgv_rma` identifier.

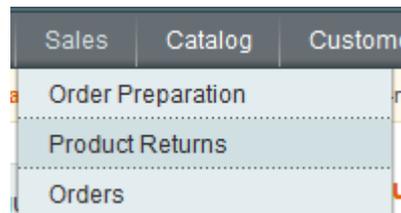

3. ProductReturn (rma)

3.1 Screens overview

3.1.1 Back office

Product return Extension add 3 entries in Magento back office :

- The first entry is under Sales menu: it displays all product returns.

- In customer edit sheet, a new tab contains all product return for this customer :

A screenshot of the Magento customer edit sheet for 'Zimmermann olivier'. The 'Customer Information' section is visible on the left, with a 'Product Returns' tab selected. The 'Personal Information' section is visible on the right, showing details like 'First Logged In', 'Confirmed email', 'Account Created on', 'Account Created in', and 'Customer Group'. A 'Back' button is located in the top right corner.

- In sales order sheet, a new tab contains all product return for the current order :

Order View

Information

- Invoices
- Credit Memos
- Shipments
- Comments History
- Preparation
- Product Returns
- Planning
- Organizer (0)

3.3 Product return creation

3.3.1 Create a new product return

Create a new Product return (Solution 1) :

- Select a sales order in magento back office
- Select “product return” tab
- Click on “New Product Return button”
- Fill information (such as Product Return reason)
- Select products to return
- Save

Create a new Product return (Solution 2) :

- Select menu sales > Product return
- Click on “New product return” button
- Select sales order
- Fill information (such as Product Return reason)
- Select products to return
- Save

3.3.2 Access to Product Return

There are 3 ways to access to an existing Product Return :

- Select matching sales order, select “Product return” tab and click on the product return
- Use search form from menu sales > Product Return
- Select matching customer, select “Product return” tab and click on the product return.

3.3.3 Edit Product Return

Public comments	Comments that can be edit by administrator and visible for customer.

Once all product return steps are done, you can finalize product return performing an action to return product, repaired product or a new one.

Product return extension allow to automatically create a new order : this is usefull to process return using Embedded ERP extension or to bill fees to customer.

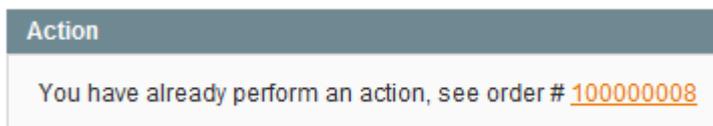

To create an action, use the form at the bottom of the product return sheet :

Action

Perform an action	<input checked="" type="checkbox"/>
Action	<input style="width: 100%;" type="text"/> ▼
Shipping Method	<input style="width: 100%;" type="text"/> ▼
Shipping Cost	<input style="width: 100%;" type="text"/>
Technical Cost	<input style="width: 100%;" type="text"/>
Technical Cost Caption	<input style="width: 100%;" type="text"/>
Payment Method	<input style="width: 100%;" type="text"/> ▼

Field	Description
Perform an action	To perform action and display form, check this checkbox
Action	<ul style="list-style-type: none"> - Product Return : return product to customer (if product works properly or has been repaired). - Exchange : Exchange product with another one. - Refund : refund customer for selected products.
Shipping Method	Shipping method to use to create order
Shipping Costs	Shipping costs (without vat)
Technical costs	Technical costs billed to customer (can be null)
Technical costs caption	Caption that describes technical costs. For example : <ul style="list-style-type: none"> - Repairing fees - Management fees - ...
Payment method	Payment method to use to create order
Refund Shipping fees	If checked, shipping cost will be refunded within creditmemo
Back products to stock	If checked, products will back to stock

To save data, use “save button” at the top of the screen. If an action has been selected, a new order is created and is displayed instead of the action form :

3.3.4 Printing & Customer notification

To print a product return form, use “print” button

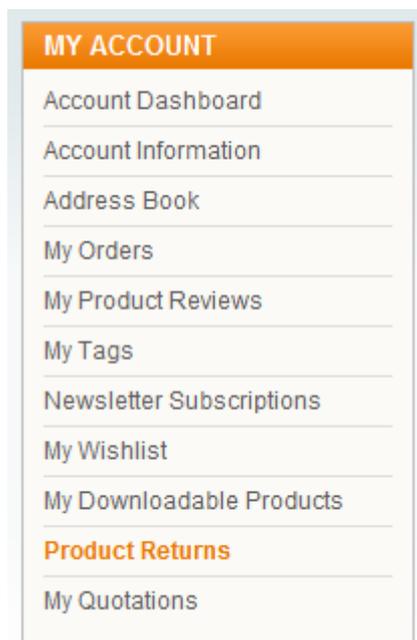

To notify customer about Product return status, use “notify customer” button.

You can customize email from menu System > Transactional email

3.4 Customer Side

3.4.1 Product return list

Customer can view product return list from it’s account, menu “Product return” :

To view product return information, use “view” link

Product Return #100000004-1

Main Information

Phone 0000
 Email zimmermannolivier@gmail.com

test2

From this screen, if product return status is “accepted”, customer can print form and accept product return terms and conditions.

3.4.2 Product Return Request

If you enabled product return request for customer (can be set in system > configuration > product return), customer can request for a new product return from their account, in product return tab.

First, customer has to select sales order that contains product to return :

Select Order for Product Return

Order #	Date	Ship to	Order Total	Order Status	
100000002	11/6/09	Zimmermann olivier	\$18.00	Complete	Select
100000003	11/6/09	Zimmermann olivier	\$15.00	Complete	Select
100000004	11/6/09	Zimmermann olivier	\$45.00	Complete	Select
100000005	11/6/09	Zimmermann olivier	\$315.00	Complete	Select

Then, customer can fill information about product return :

Request Product Return for Order #100000004

Main Information

Phone
 Email
 Address
 Reason

Products

Product	Qty	Comments
produit 1	<input type="text" value="0"/>	<input type="text"/>

Additional Comments

Once customer submit request, a new product return is created (with “requested” status) and an email is sent to the after sale service to notify this new request.

4. Additional information

4.1 Edit Email Template

You can customize email sent by product return extension from menu system > transactional emails

Template name	Description
