

## Components

1. Detachable Bracket
2. Keyboard
3. Beeper
4. Movable Weight
5. Fishing Line Clip
6. LED - Position Light

## Battery Changing and Specifications

The control panel battery is located inside the Bite Alarm. You need a screwdriver to unscrew four little screws. After opening the panel box, take the new battery and set it inside the panel box. Connect the positive (+) and negative (-) wires of the battery to the appropriately terminals as it is shown on the picture. When changing the batteries, make sure to handle it gently. Rough and careless handling may cause cracks, fractures, tipping and leakage. PCB is a very high quality but under the long influence of water it can become rusty if battery box is not tightly closed, so please check it carefully. There is no guarantee due to corrosion or accidentally damages such as water damage, dropped or cracked Bite Alarm.

### BATTERY CHARACTERISTICS:

Type: 1 X Micro AAA

Duration: depending of the usage, ca. 200 – 250 hours

## Function Description

### 1. TURN ON BITE ALARM

Press the button No. 8 and hold it for 1 – 2 seconds. The ON MODE is indicated by LED and audio signal (BEEP).
