Hardware Features

The LEDs on the front show how the WiFi Booster is working.

Link Rate

This LED indicates a wireless connection between the WiFi Booster and the router.

- Green is best.
- Amber is good.
- Red is poor.

Status

This LED is lit when the WiFi Booster is powered on.

WiFi Device to Booster

This LED is lit when the WiFi Booster is connected to a computer or wireless device.

The side panel has the following features:

- **On/Off button.** Turns the device on and off.
- **WPS button.** Press the **WPS** button to wirelessly connect the WiFi Booster to your router or wireless adapter. All LEDs blink when the WPS procedure starts.

The bottom panel has the Factory Reset button. To use this button, insert a paper clip into the **reset** hole and hold it until the Status LED blinks. Then wait for the booster to reboot.

Getting Started

The WiFi Booster extends the wireless network to include the area outside the range of your existing WiFi network. Follow these steps to correctly set up the WiFi Booster.

Place the WiFi Booster

1. Place the WiFi Booster an equal distance between your router and the wireless device located outside the range of your router.

Tip: Make sure that you choose a location that is within the wireless range of your router.

2. Plug the WiFi Booster into an electrical outlet, and wait one minute until the WiFi Booster starts.

The Status LED  turns green.

Connect the WiFi Booster

To extend the range of your WiFi network, you need to connect the WiFi Booster to your existing WiFi network. You have two options to connect the WiFi Booster to your network.

Option 1: Connect with WPS (Wi-Fi Protected Setup)

WPS lets you easily join a secure WiFi network without typing the network name and password. The WPS button is a physical button on the WiFi router, gateway, or access point. For more information, see page 7.

If your router supports WPS (Wi-Fi Protected Setup ) , NETGEAR recommends that you use Option 1; otherwise, use Option 2.

Tip: WPS does not support WEP network security. If you are using WEP security, use Option 2 to connect.

Option 2: Connect with the web browser setup guide

The web browser setup guide walks you through the necessary steps to connect your WiFi Booster to an existing WiFi network. For more information, see page 8.

Option 1: Connect with WPS (Wi-Fi Protected Setup)

1. Press the **WPS** button  on the WiFi Booster.
2. Within two minutes, press the **WPS** button  on your wireless router, gateway, or access point.

At this point, the WiFi Booster should be connected to your existing WiFi network, and the Link Rate LED  on your WiFi Booster lights.

3. The WiFi Booster's wireless network name (SSID) changes to your existing WiFi network name, with _EXT at the end of the name.

For example:

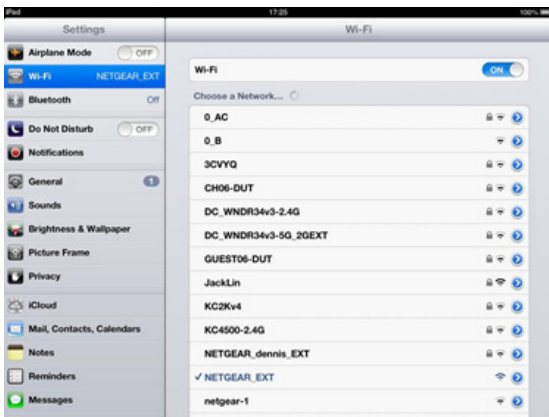

Existing WiFi network name: MyNetworkName

New WiFi Booster network name: MyNetworkName_EXT

4. Now connect your existing WiFi devices to the new WiFi Booster network (MyNetworkName_EXT). Use the same network security key (passphrase) as is set on your existing WiFi network/WiFi router.

Option 2: Connect with web browser setup guide

1. Once the WiFi Booster is powered on and the Status LED  is green, use a WiFi network utility on a wireless device to find and connect to NETGEAR_EXT (SSID) wireless network.

Tip: You can use any WiFi network utility on a laptop, tablet, or smartphone to find and connect to the WiFi Booster wireless network.

After the connection with the wireless device is established, the WiFi Device to Booster LED  turns green.

Next, you need to connect the WiFi Booster to your existing WiFi network.

2. Open a web browser window from the same wireless device. The browser takes you directly to the onscreen setup guide.

Tip: You can always access the WiFi Booster settings again by typing **www.mywifiext.net** in your browser URL bar. Note that you must be connected to the WiFi Booster/extended network for the setup guide to display.

3. Select the existing WiFi network you would like to extend, and click **Continue**.

NETGEAR genie™

WN1000RP

Extender-to-Router
Device-to-Extender
Apply Settings

Enter the security settings of the selected WiFi network.

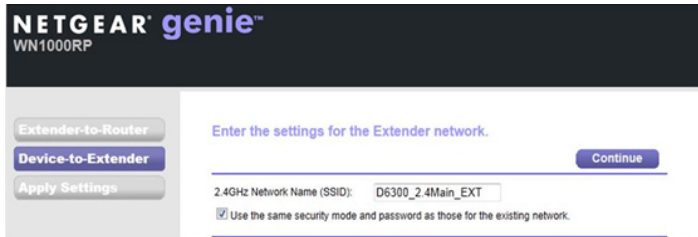

Your existing network in 2.4GHz:

Name (SSID): D6300_2.4Main
Security: WPA-PSK + WPA2-PSK
PassPhrase :

Back Continue

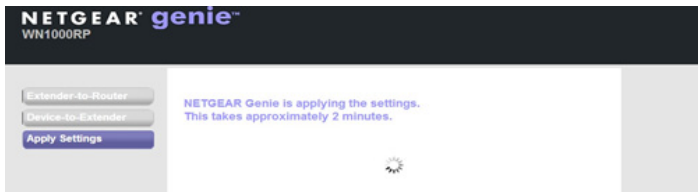

5. Type the name (SSID) for your new WiFi Booster/extended network in the **2.4GHz Network Name (SSID)** field, and click **Continue**.

Note: You can change the SSID and wireless passphrase or use the same security settings of the existing network.

The screenshot shows the NETGEAR genie WN1000RP configuration interface. On the left, there are three buttons: "Extender-to-Router", "Device-to-Extender" (which is highlighted in blue), and "Apply Settings". The main area has a heading "Enter the settings for the Extender network." followed by a "Continue" button. Below this, the "2.4GHz Network Name (SSID)" field contains the text "D6300_2.4Main_EXT". A checkbox labeled "Use the same security mode and password as those for the existing network." is checked.

The extender applies the settings.

This screenshot shows the same NETGEAR genie WN1000RP configuration interface, but now the "Device-to-Extender" button is disabled and greyed out. The main area displays the message "NETGEAR Genie is applying the settings. This takes approximately 2 minutes." with a small circular progress indicator below it.

6. Connect the wireless devices to the WN1000RP's newly created wireless network, select the **My wireless devices are connected to the Extender network** check box, and click **Continue**.

NETGEAR genie™
WN1000RP

Extender-to-Router
Device-to-Extender
Apply Settings

You are now one step away from completing the installation.

Your Extender network has been created:
Extender network (2.4GHz b/g/n):
Wireless network name (SSID): D6300_2_4Main_EXT
Security Type: WPA/WPA2-PSK
Passphrase: netgear101

Next, you will need to connect your wireless devices to the Extender network. On your wireless device (e.g. laptop, tablet, smartphone, gaming console, etc.) use the wireless manager to find the extender network names and connect. For example, you might use Windows software as shown below to connect your PC to the Extender network.

☒ My wireless devices are connected to the Extender network. (Selecting this checkbox activates the Continue button.)

Continue

7. Click **Finish**.

If you want to make changes after using the web browser setup guide or you wish to run the setup guide again, use your browser to go to **www.mywifiext.net**. If prompted, log in as **admin** with **password** as the password.

WiFi Booster Performance

The Link Rate LED  indicates performance.

-  The best performance is delivered when the Link Rate LED is green.
-  A workable performance is delivered when the Link Rate LED is amber.
-  A red Link Rate LED indicates a poor connection or no connection.
-  If the Link Rate LED is off, there is no connection between the WiFi Booster and the router.

Tip: Make sure your WiFi Device to Booster LED is green before you check the Link Rate LED for performance.

- **To improve the WiFi Booster performance:**
1. Move the WiFi Booster closer to the router or to a different location with a better line of sight.
 2. As you move the WiFi Booster, check the Link Rate and the WiFi Device to Booster connection LEDs on the front panel until you find a good location.

When to Use the WiFi Booster

NETGEAR recommends that you connect to the WiFi Booster wireless network only when a computer or wireless device is in a “dead zone” where the network connection to your existing router is poor or nonexistent.

If you cannot connect from your wireless device to the WiFi Booster, move the WiFi Booster to a different location halfway between the device and the router. If the device cannot connect to the WiFi Booster after trying several locations, move the WiFi booster closer to the device.

Frequently Asked Questions

You can find more information about your product in the user manual, which is available at <http://support.netgear.com>.

- **The web browser setup guide keeps asking me for my network security key (passphrase), and I am sure I have entered the correct passphrase. What can I do?**

It is likely that the WiFi Booster is placed at the borderline of the range covered by the router. Follow the instructions on page 5 to resolve this. If you are using WEP security, make sure that you are typing the wireless key in the correct field.

- **I connected to NETGEAR_EXT and launched a browser. Why can't I see the web browser setup guide?**

First, make sure that your computer is set up to use DHCP (most are). Second, make sure the WiFi Device to Booster status LED is green and you have a valid IP address. Finally, relaunch the browser and enter **www.mywifiext.net**.

- **What are the user name and password to log in to the WiFi Booster?**

The user name is **admin** and the default password is **password**. Both are case-sensitive.

- **I have enabled a wireless MAC filter (wireless access control - ACL) on my router. What should I do when installing the WN1000RP?**

The wireless device MAC address is translated to another MAC address when the wireless device connects to the WN1000RP. If your router MAC filter is enabled, the wireless device will not be able to get the IP address from the WN1000RP. To allow this wireless device to access the Internet, you must add the translated MAC address to the router.

➤ **To get the translated MAC address:**

1. Disable the MAC filter on your router.
2. Power on the WN1000RP and connect all of your wireless devices to the WN1000RP.

3. Make sure that the Link Rate LED remains lit.
4. Log in to your router and check the attached devices on the Attached Devices screen. Add any MAC addresses that begin with **02:0F:B5** to your router's MAC filter table.
