About this manual

PLUS+1 Controller Family Technical Information

This manual is designed to be a comprehensive PLUS+1® product family hardware module reference tool for vehicle OEM design, engineering, and service personnel. It is one of four sources of PLUS+1 product technical information. Other sources include individual module product data sheets, module specific Application Program Interface (API) specifications and the *PLUS+1 GUIDE Software User Manual*, literature number **10100824**.

What information is in this manual?

This manual describes unique characteristics of specific PLUS+1 modules and electrical details that are common to all PLUS+1 modules, including general specifications, input and output parameters, environmental ratings and installation details.

What information is in individual module product data sheets?

Parameters that are unique to an individual PLUS+1 module are contained in the module product data sheet. Data sheets contain the following information:

- Numbers and types of inputs and outputs
- Module connector pin assignments
- Module maximum current capacity
- Module sensor power supply (if present) current capacity
- Module installation drawing
- Module weights
- Product ordering information

What information is in individual module API specifications?

Detailed information about the module BIOS is contained in the module API specification. PLUS+1 BIOS functionality is pin dependent. Pins are defined in module data sheets as C (connector number) p (pin number). API specifications include:

- Variable name
- Variable data type
- Variable direction (read/write)
- Variable function and scaling

Module API specifications are the definitive source of information regarding PLUS+1 module pin characteristics.

What information is in the PLUS+1 GUIDE Software User Manual?

Detailed information regarding the PLUS+1 GUIDE software tool set that is used to build PLUS+1 machine management solutions is contained in the user manual. This technical information manual covers the following broad topics:

- How to use the GUIDE graphical application development tool to create machine applications
- How to configure module input and output parameters
- How to configure module input and output parameters
- How to download GUIDE applications to target PLUS+1 hardware modules
- How to upload and download tuning parameters
- How to use the PLUS+1 service tool

PLUS+1 product literature is available at: www.danfoss.com

Product Overview

PLUS+1® MC0XX-1XX Controllers Family of Mobile Machine Management Products

12, 24, and 50 Pin Models

PLUS+1 controllers and input/output expansion modules are designed to provide flexible, expandable, powerful, and cost effective total machine management systems for off-highway vehicles. These modules communicate with one another and other intelligent systems over a machine Controller Area Network (CAN) data bus. PLUS+1 hardware products are designed to be equally effective in a distributed CAN system, with intelligence in every node, or as stand-alone control for smaller machine systems. PLUS+1 systems are incrementally expandable: additional modules can be easily added to the machine CAN bus to increase system capabilities or computational power.

PLUS+1 control products utilize modular designs wherever possible. This modularity extends to product housings, connectors and control circuitry. Three standard housings, 12, 24, and 50 pin, cover this product line.

User liability and safety statements

OEM responsibility

The OEM of a machine or vehicle in which Danfoss products are installed has the full responsibility for all consequences that might occur. Danfoss has no responsibility for any consequences, direct or indirect, caused by failures or malfunctions.

- Danfoss has no responsibility for any accidents caused by incorrectly mounted or maintained equipment.
- Danfoss does not assume any responsibility for Danfoss products being incorrectly applied or the system being programmed in a manner that jeopardizes safety.
- All safety critical systems shall include an emergency stop to switch off the main supply voltage for the outputs of the electronic control system. All safety critical components shall be installed in such a way that the main supply voltage can be switched off at any time. The emergency stop must be easily accessible to the operator.

Inputs/Outputs Types and Specifications

Each PLUS+1 hardware module has input or output pins that support multiple functions. Pins that support multiple input or output types are user-configurable using PLUS+1 GUIDE software. Refer to controller data sheets for the input/output (I/O) content of individual modules.

Inputs
Input types

- Digital (DIN)
- Digital or Analog (DIN/AIN)
- Analog or Temperature or Rheostat (AIN/Temp/Rheo)
- Multifunction: Digital or Analog or Frequency (DIN/AIN/FreqIN)
- Multifunction: Digital or Analog or Frequency or Rheostat (DIN/AIN/FreqIN/Rheo)
- Fixed Range Analog or CAN shield (AIN/CAN shield)

Each PLUS+1® Module input pin supports one of the above functional types. For pins with multiple functions, input configurations are user programmable using PLUS+1 GUIDE templates.

Digital (DIN)

Digital inputs connected to PLUS+1® dedicated digital input pins are debounced in software. Digital input debounce is defined as an input being in a given state for three samples before a state change is reported. The sample time is a function of application loop time.

Multifunction pins that are configured to be DIN are subject to the same update rates as the analog input function for that pin. Debounce is not used, as hysteresis is built into the function. The time to recognize a transition is dependent on the timing of the switch activation and the sample rate.

General

Description	Comment
Response to input below minimum voltage	Non-damaging, non-latching; reading saturates to the low limit.
Response to input above maximum voltage	Non-damaging, non-latching; reading saturates to the high limit.
Response to input open	Pin configuration dependent: No pull up/ no pull down = floating Pull up to 5 Vdc = 5 Vdc Pull down = 0 Vdc Pull up/ pull down = 2.5 Vdc
Voltage working ranges	Programmable (see specific data sheets for ranges).

Specifications

Description	Units	Minimum	Typical	Maximum	Comment
Input voltage range	V	0	—	36	
Rising threshold voltage	V	—	—	3.91	Guaranteed high voltage.
Falling threshold voltage	V	0.85	—	—	Guaranteed low voltage.
Input impedance	kΩ	230	233	236	No pull up or pull down.

Inputs/Outputs Types and Specifications
Specifications (continued)

Description	Units	Minimum	Typical	Maximum	Comment
Input impedance (5 V/GND)	kΩ	13.9	14.1	14.3	Pull up to +5 V or pull down to ground.

Analog (AIN)
Specifications

Description	Units	Minimum	Typical	Maximum	Comment
Allowed voltage at pin	V	0	—	36	
Middle range					
Minimum discernable voltage	mV	0	—	20	
Maximum discernable voltage	V	5.15	—	5.37	
Precision	mV	—	1.3	—	
Worst case error	mV	—	—	120	Over the full temperature range
Input impedance	kΩ	230	233	236	No pull up or pull down
Input impedance (5 V/GND)	kΩ	13.9	14.1	14.3	Pull up to +5 V or pull down to ground
Input impedance (2.5 V)	kΩ	7.1	7.3	7.4	Pull to +2.5 V
High range					
Minimum discernable voltage	mV	0	—	130	
Maximum discernable voltage	V	34.1	35.3	36.4	
Precision	mV	—	9	—	
Worst case error	V	—	—	1.1	Over the full temperature range
Input impedance	kΩ	108	109	111	No pull up or pull down.
Input impedance (5 V/GND)	kΩ	13.0	13.2	13.4	Pull up to +5 V or pull down to ground.
Input impedance (2.5 V)	kΩ	6.9	7.0	7.1	Pull to +2.5 V

A/D refresh rate for PLUS+1® modules
A/D refresh rates

MC024-110/112	All: 1.00 ms
MC024-120/122	All: 1.00 ms
MC050-110/112	All: 1.00 ms
MC050-120/122	All: 1.00 ms
MC050-155/15B	All: 1.00 ms
IOX012-110	Refresh rate is a function of CAN message frequency
IOX024-120	Refresh rate is a function of CAN message frequency

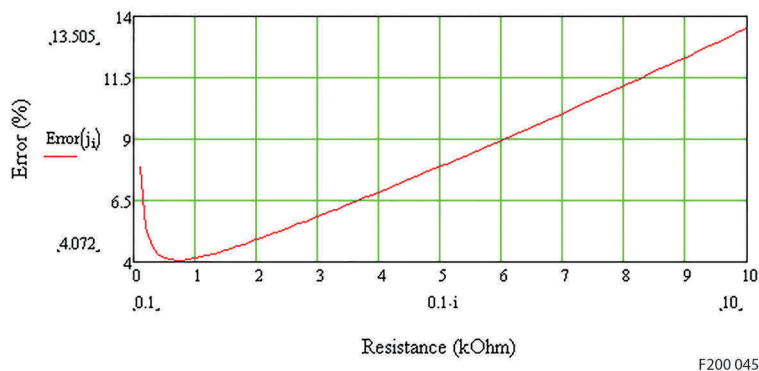

Analog/Temperature/Rheostat (AIN/Temp/Rheo); Digital/Analog/Frequency/Rheostat (Din/AIN/FreqIN/Rheo)

When configured as a resistance/rheostat/temp sensor input, the device will provide up to 3.76 mA current to an external load which can then be measured. The equation for calculating AD counts for a given load is: $AD\ counts = (30996 \times RL / (RL + 1322))$. The following chart shows the relationship between AD counts and load.

Rheostat inputs

F200 044

The following chart shows the relationship between load resistance versus worst case error over the full operating temperature -40° C to 70° C (-40° F to 158° F).

Inputs/Outputs Types and Specifications
Load resistance versus worst case error

Digital/Analog/Frequency(DIN/AIN/FreqIN); Digital/Analog/Frequency/Rheostat(Din/AIN/FreqIN/Rheo)(All models)

The characteristics of Digital/Analog/Frequency pins are PLUS+1® GUIDE software controlled. The input can be digital, analog or frequency. Inputs can be pulled to 5 Vdc, pulled to ground, pulled to 2.5 Vdc, or no pull-up/pull-down.

General

Description	Comment
Response to input below minimum voltage	Non-damaging, non-latching; reading saturates to the low limit.
Response to input above maximum voltage	Non-damaging, non-latching; reading saturates to the high limit.
Expected measurement	Frequency (Hz)
	Period (0.1 µsec)
	Channel to channel phase shift (paired inputs . . .) (0.1 ms).
	PWM duty cycle (0.01%)—Duty cycle measurement only valid up to 5 kHz (FreqIN).
	Edge count.
	Quadrature count (paired inputs driven from a quadrature encoder).
Pull up/pull down configuration	No pull down/ pull up is standard with pull up or pull down programmable; failure modes are detectable.

As with analog input pins, values in the following table assume software compensation for AD converter offset errors.

Specifications

Description	Units	Minimum	Typical	Maximum	Comment
Allowed voltage at pin	V	0	—	36	
Frequency range	Hz	0	—	10,000	In steps of 1 Hz.
Frequency range when input is used	Hz	0	—	5000	In steps of 1 Hz.

Inputs/Outputs Types and Specifications
Specifications (continued)

Description	Units	Minimum	Typical	Maximum	Comment
as quad count or phase shift					
Low range

Middle and low range DAF					
Input impedance	kΩ	230	—	236	No pull up or pull down.
Input impedance (5 V/GND)	kΩ	13.9	—	14.3	Pull up to +5 V or pull down to ground.
Input impedance (2.5 V)	kΩ	7.1	—	7.4	Pull to +2.5 V.
High range DAFR					
Input impedance	kΩ	63	—	95	No pull up or pull down.
Input impedance (5 V/GND)	kΩ	12	—	13.1	Pull up to +5 V or pull down to ground.
Input impedance (2.5 V)	kΩ	6.64	—	7.02	Pull to +2.5 V.
Middle and low range DAFR					
Input impedance	kΩ	91	—	175	No pull up or pull down.
Input impedance (5 V/GND)	kΩ	12.7	—	14.0	Pull up to +5 V or pull down to ground.
Input impedance (2.5 V)	kΩ	6.86	—	7.26	Pull to +2.5 V.

If the frequency goes to zero, the data will not decay over time, it will be updated once a new pulse is seen, or times out. It is possible to monitor the count of pulses to know when the frequency reading is updated.

Outputs
Output types

- Digital (DOUT)
- Digital/PVG valve reference power (DOUT/PVGpwr)
- Pulse width modulated (PWM/DOUT/PVGOUT)

Output pins available on individual PLUS+1® modules

PLUS+1 module	DOUT (3 A)	DOUT/PVGpwr (3 A)	PWMOUT/DOUT/PVGOUT (3 A)
MC012-110/112			2
MC024-110/112			4
MC024-120/122			8
MC050-110/112	3	3	10
MC050-120/122	6	2	6
MC050-155/15B	1		2
IOX012-110			2

Inputs/Outputs Types and Specifications

Output pins available on individual PLUS+1® modules (continued)

PLUS+1 module	DOUT (3 A)	DOUT/PVGpwr (3 A)	PWMOUT/DOUT/PVGOUT (3 A)
IOX024-120			8
OX012-110			6
OX024-110	4	2	10

PLUS+1 control modules feature user-configurable output pin parameters. Output pin parameters are configured using PLUS+1 GUIDE templates.

⚠ Warning

Unintended movement of the machine or mechanism may cause injury to the technician or bystanders. The module will be powered up if battery voltage is applied to the module's output pin. To protect against unintended movement, secure the machine.

⚠ Caution

Warranty will be voided if module is damaged by significant current driven back through an output pin.

Digital (DOUT) and Digital/PVG Reference Power (DOUT/PVEpwr)

Digital outputs can source up to 3 A

- Current outputs for MC050-110, MC050-120, and OX024-110 module
- DOUT and DOUT/PVG Pwr pins are pair limited and a function of temperature.
Output per pair is: 6 A maximum at 25° C [77° F]. Output per pair is 4 A maximum at 70° C [158° F]
- MC050-110 pairs are: C1p31 and C1p32, C1p33 and C1p34, C1p35 and C1p36
- MC050-120 pairs are: C1p33 and C1p34, C1p35 and C1p36, C1p37 and C1p38, C1p39 and C1p40
- OX024-110 pairs are: C1p6 and C1p7, C1p8 and C1p9, C1p10 and C1p11
- Example: at a module temperature of 70° C [158° F], if C1p31 is sourcing 2.5 A, the most current that can be sourced on its paired pin C1p32 is 1.5 A

General

Description	Comment
Configuration	Sourcing only.
Type	Linear switching.
Short circuit to ground protection	Non-damage, current/thermal limit with status indication; automatic latch off /resume.
Open circuit detection	Fault indication provided. The GUIDE Pin Status requires a load of 500 mA to be connected or an open fault will be declared.
Parallel operation	Digital outputs from the same module are capable of being connected together such that the net current rating is the sum of the individual ratings; timing is resolved by the operating system; diagnostic capability is maintained.
Shut off	Processor control with hardware WatchDog override.

Inputs/Outputs Types and Specifications
Specifications

Description	Units	Minimum	Maximum	Comment
Allowed voltage at pin	V	0	36	See caution statement, page 17.
Output voltage, energized state	V	Vbatt-1.0	Vbatt	Over all load conditions.
Output voltage, off state	V	0	0.1	At Rload=200 Ω
Output current range for a status bit to read OK	A	0.5	3	See note regarding pair, above.

Do not connect a digital output to battery+ (back drive) without a series diode.

Pulse Width Modulated (PWMOUT/DOUT/PVGOUT)

All PLUS+1® module proportional outputs are Pulse Width Modulated (PWM). PWM frequency is software adjustable using GUIDE. A low frequency dither may also be added with software to some outputs (see individual module API specifications for PWM outputs that support dither). There are two modes of PWM operation: open loop and closed loop (current control).

In open loop mode, current can be sourced or sunk (all modules are limited to 8 amps sinking), but the output is a PWM duty cycle. Current feedback may be monitored in open loop mode, but the output is a constant voltage, not a constant current. PVG valves may be driven with open loop PWM.

In closed loop mode, current is sourced and a constant current is maintained by the module's operating system using internal current feedback. Load impedance must not exceed 65 ohms.

In closed loop mode, the maximum current is limited by measuring the feedback current. There is no thermal protection. If the maximum current is exceeded, the controller kernel will shut down the output and latch it. The kernel also limits how quickly the output can be repowered (250 ms). The output cannot be reset until the command goes to 0 or False (if configured as a digital output).

Proportional outputs that are used as a digital sinking output have a potential for a leakage current of up to 5 mA when off.

Refer to individual module data sheets for the maximum allowable output current for each PLUS+1 module.

PWM output are phase shifted to reduce input current ripple.

General

Description	Comment
Configuration	Sourcing or sinking.
Type (Linear vs. PWM)	PWM
Operating modes	Programmable: closed loop current or open loop voltage (duty cycle).
Dual coil PCPs	Compensated for induced currents in a non-driven coil (closed loop mode).
Short circuit to ground	Output fully protected against damage and fault detected.
Mode selection (current or voltage) and full scale current ranges	Programmable.

Do not connect a digital output to battery+ (back drive) without a series diode.

Inputs/Outputs Types and Specifications

PLUS+1 PWM output circuits are not designed to be used as inputs. Output current feedback readings should be used for fault checking only.

⚠ Warning

Unintended movement of the machine or mechanism may cause injury to the technician or bystanders. The module will be powered up if battery voltage is applied to the module's output pin. To protect against unintended movement, secure the machine.

⚠ Caution

Warranty will be voided if module is damaged by significant current driven back through an output pin.

Specifications

Description	Units	Minimum	Maximum	Comment
Full scale proportional current output	mA	10	3000	The current may accidentally be exceeded in open loop mode. If the current exceeds the trip point, the output will be latched off.
Output voltage, 100% duty cycle	V	0	V _{batt} -1	
Output resolution of 3 A	mA		0.25	
Repeatability of full range	% of full scale		0.5	
Absolute accuracy of full range	% of full scale		3	1% typical. Offsets removed when command is ∅.
Output settling time	ms		100	Depends on load characteristics.
PWM frequency	Hz	33	4000	Some pins have a fixed frequency, consult module application program interface (API).
Dither frequency	Hz	33	250	Increased in steps, see module API.
Dither amplitude	A	0	0.5	Increased in steps, see module API.
Over-current trip point	A	5	5.25	There is over-current protection built into each output driver. If the instantaneous current exceeds the trip point, the driver is latched off. GUIDE application software can reset the latch and attempt to drive current again.

Controller Area Network (CAN) specifications
CAN ports
System design

All PLUS+1® modules have CAN ports that conform to CAN 2.0B specifications, including CAN shield.

CAN1 port and CAN2 port on MC050-155/15B controllers cannot be used to download PLUS+1 GUIDE application programs.

Terminating resistor

Each end of the main backbone of the CAN bus must be terminated with an appropriate resistance to provide correct termination of the CAN_H and CAN_L conductors. This termination resistance should be connected between the CAN_H and CAN_L conductors.

Specifications

Description	Units	Minimum	Maximum	Nominal	Comment
Resistance	Ω	110	130	120	Minimum power dissipation 400 mW (assumes a short of 16 Vdc to CAN_H).
Inductance	μH		1		

CAN Bus installation

Total bus impedance should be 60 Ω.

The CAN transceiver will be damaged by any voltage outside of allowable range, even with a very short pulse.

If using shielded cable, the shield must be grounded to the machine ground at one point only; preferably at the mid-point of the CAN bus. Each PLUS+1® module CAN shield pin must be connected to the cable shield.

Expansion module CAN Bus loading

System designers incorporating PLUS+1® expansion modules in their applications should be aware of PLUS+1 CAN bus loading and controller memory usage during system design. Each expansion module is associated with a PLUS+1 controller and uses part of the controller's memory resources for inter-module communications. The table below can be used to estimate system CAN bus loading and the memory impact of I/O modules on their associated controller.

Estimated usage of memory and communication resources

Description	IX012-010	IX024-010	OX012-010	OX024-010	IOX012-010	IOX024-20
Estimated module bus load (using default update and 250K bus speed)	4%	10%	11%	27%	11%	27%
Estimated module bus load (using 70 ms updates and 250K bus speed)	2%	5%	3%	8%	4%	8%

Controller Area Network (CAN) specifications

Estimated usage of memory and communication resources (continued)

Description	IX012-010	IX024-010	OX012-010	OX024-010	IOX012-010	IOX024-20
RAM usage on MC012-XXX	9%	12%	9%	14%	9%	17%

Product ratings
Power
Module supply voltage/maximum current ratings

PLUS+1® modules are designed to operate with a nominal 9 to 32 Vdc power supply. The modules will survive with full functionality if the supply voltage remains below 36 Vdc.

Specifications

Description	Units	Minimum	Maximum	Comment
Allowed voltage at pin	V	0	36	
Allowed module current	A	0		Consult module data sheets for maximum allowable current.

 **Caution**

PCB damage may occur. To prevent damage to the module all module power supply + pins must be connected to the vehicle power supply to support advertised module maximum output current capacity. **DO NOT** use module power supply + pins to supply power to other modules on a machine.

Sensor power supply ratings

PLUS+1® modules that support sensor inputs are provided with dedicated regulated sensor power supply and ground pins. Refer to individual product data sheets for sensor power supply current ratings. The sensor power is nominally 5 Vdc, unless otherwise noted on the product data sheet.

General

Description	Comment
Short circuit to ground	Output is not damaged and fault is detected.
Short circuit to battery +	Output is not damaged and fault is detected.

Specifications (all modules except MC050-055/05B)

Description	Units	Minimum	Maximum	Comment
Output short circuit voltage	V		36	
Output voltage	V	4.88	5.12	
Output current	mA			Refer to individual data sheets for sensor power supply ratings.
Output Load Capacitance	µF		10	
Hold up time after power loss	m s	5	15	

MC050-155/15B controllers feature two additional levels of regulated power: 1.6 Vdc and 3.3 Vdc. The PLUS+1 GUIDE application developer can detect open and short digital inputs, when these power supplies are used in conjunction with DIN/AIN inputs.

Specifications (MC50-155/15B)

Description	Units	Minimum	Maximum	Comment
Output short circuit voltage	V		36	

Product ratings
Specifications (MC50-155/15B) (continued)

Description	Units	Minimum	Maximum	Comment
Output voltage, sensors	V	4.88	5.12	Sensor power supply drops below minimum if controller power supply is less than 9 Vdc.
Output voltage, DIN diagnostics	V	1.54	1.66	Nominal 1.6
Output voltage, DIN diagnostics	V	3.00	3.60	Nominal 3.3

PVG valve power supply

DOUT/PVGpwr pins can provide the battery supply voltage required by Danfoss PVG valve electronics for those control strategies requiring application software control of the valve power source.

When enabled, the DOUT/PVGpwr pin passes battery (reference) voltage to the PVG valve electronics. One DOUT/PVGpwr pin can power up to 3 PVG valves. Refer to individual module API documents for PVG power pin characteristics.

EEPROM write/erase
Ratings
Specifications

Description	Minimum	Maximum	Comment
FRAM write/erase cycles	100 trillion		Minimum valid over entire operating temperature range.

EEPROM used in PLUS+1® MC0XX-1XX controllers are rated for 100 trillion read/write cycles per sector. Sector size is 32 bits. When a value is written to EEPROM, all 32 bits in a particular sector are always written, regardless of the size of the saved value. If the value being saved in a sector is less than 32 bits (such as. U8, S16, BOLL, etc) adjacent bits in the same EEPROM sector are rewritten with their previous value. The implication of this memory property is that if two values are being written to the same memory sector, the useful life of the sector is determined by the value being written most frequently. If that value exceeds 1 million read/write cycles, all values in the sector may be compromised if the useful life is exceeded.

Vault memory

Some variants of PLUS+1® modules have 2 Mbyte of serial flash vault memory (also referred to as *application logging memory*).

Application developers can use this memory to log machine event data and use the PLUS+1 Service Tool to extract the logged data. As there is no real time clock on PLUS+1 modules, vault memory is not time stamped.

Accessing non-volatile or application log memory can delay the service tool scan.

Environmental testing criteria
General product ratings

Description	Units	Minimum	Maximum	Comment
Operating temperature	°C [°F]	-40 [-40]	70 [158]	Maximum operating temperature for MC012-026/029 modules is 105° C (221° F).
Storage temperature	°C [°F]	-40 [-40]	85 [185]	Maximum storage temperature for MC012-026/029 modules is 105° C (221° F).
Allowable module supply voltage	V	9	36	Minimum allowable supply voltage for the MC038-010 module CPU power pin is 6 Vdc.
Module sensor supply voltage	V	4.8	5.2	Sensor voltage drops below the minimum value if module supply voltage < 9 Vdc. Exception for MC050-055/05B and MC024-01A, see Sensor Power Supply Ratings, page 23.
Analog input voltage levels	V		36	
Allowable output load current (per pin)	A			See individual module data sheets.
Module allowable total output current	A			See individual module data sheets.
All modules Ingress Protection (IP) rating*				IP 67 * The PLUS+1® modules IP 67 rating is only valid when the module mating connector is in place and unused connector pin positions have sealing plugs installed.
All modules CE rating				CE compliant.

PLUS+1® module environmental testing criteria
Climate environment

Description	Applicable standard	Comment
Storage temperature	IEC 60068-2-1, test Ab, IEC 60068-2-2 test Bb	
Operating temperature	IEC 60068-2-1, test Ab, IEC 60068-2-2 test Bd	
Thermal cycle	IEC 60068-2-2, test Na, IEC 60068-2-38 (partial)	
Humidity	IEC 60068-2-78, IEC 60068-2-30 test Db	Damp heat steady state and cyclic.
Degree of protection	IEC 60529	

Chemical environment

Description	Applicable standard	Comment
Salt mist	IEC 60068-2-58 test Kb	

Product ratings
Chemical environment (continued)

Description	Applicable standard	Comment
Chemical resistance	ISO 16750-5	

Mechanical environment

Description	Applicable standard	Comment
Vibration	IEC 60068-2-6 test Fc, IEC6008-2-64 test Fh	
Bump	IEC 60068-2-29 test Eb	
Shock	IEC 60068-2-27 test Ea	
Free fall	IEC 60068-2-32 test Ed	

Electrical/electromagnetic

Description	Applicable standard	Comment
EMC emission	ISO 13766, SAE J1113-13	Electromagnetic compatibility for earth moving machinery.
EMC immunity	ISO 13766	Electromagnetic compatibility for earth moving machinery.
Electrostatic discharge	EN 60-1 000-4-2	
Auto electrical transients	ISO 7637-2, ISO 7637-3	
Short circuit protection	Danfoss test	Inputs and outputs survive continuous short circuit. Normal function resumes when short is removed.
Reversed polarity protection	Danfoss test	Survives reverse polarity at supply voltage for at least five minutes.

Modules housing

PLUS+1® module housings feature a snap together assembly that is tamper-proof. Once assembled at the factory, the housing cannot be opened for service.

Opening the modules housing will void the factory warranty.

Product installation and start-up
General comments
Mating connectors

PLUS+1® modules use Deutsch® connectors. Danfoss has assembled a mating connector kit, referred to as a bag assembly, for the 12, 24, and 50 pin module housings. Mating connector bag assembly ordering information is found in the product data sheet for each module.

Deutsch mating connector part information

Description	12 pin module	24 pin module	50 pin module
Crimp tool	HDT48-00 (solid contacts) (20 to 24 AWG)	HDT48-00(solid contacts) (20 to 24 AWG)	HDT48-00 (solid contacts) (20 to 24 AWG)
	DTT20-00 (stamped contacts) (16 to 20 AWG)	DTT20-00 (stamped contacts) (16 to 20 AWG)	DTT20-00 (stamped contacts) (16 to 20 AWG)
Contacts	Solid: 0462-201-2031 (20 to 24 AWG)	Solid: 0462-201-2031 (20 to 24 AWG)	Solid: 0462-201-2031 (20 to 24 AWG)
	Stamped: 1062-20-0144 (16 to 20 AWG)	Stamped: 1062-20-0144 (16 to 20 AWG)	Stamped: 1062-20-0144 (16 to 20 AWG)
Connector plug	Gray A-Key DTM 06-125A	Gray A-Key DTM 06-125A Black B-Key DTM 06-125BA	DRC26-50S01
Wedge	WM-12S	WM-12S	Not required
Strip length	3.96 to 5.54 mm [0.156 to 0.218 in]	3.96 to 5.54 mm [0.156 to 0.218 in]	3.96 to 5.54 mm [0.156 to 0.218 in]
Real seal maximum insulation OD	3.05 mm [0.120 in]	3.05 mm [0.120 in]	2.41 mm [0.095 in]
Sealing plugs	0413-204-2005	0413-204-2005	0413-204-2005

Danfoss mating connector part information

Description	12 pin module	24 pin module	50 pin module
Mating connector bag assembly (20 to 24 AWG)	10100944	10100945	10100946
Mating connector bag assembly (16 to 20 AWG)	10102025	10102023	10102024

Danfoss crimp extraction tool part information

Description	Part number
Crimp tool for 20 to 24 AWG	10100745
Crimp tool for 16 to 20 AWG	10102028
Extraction tool Deutsch 114010; 12 AWG	11068808
Extraction tool Deutsch 0144-240-2005; 16 to 20, 20 to 24 AWG	10100744

PLUS+1 module mating connectors may be mated 10 times.

Recommended torque for the Deutsch mating connector retaining fastener on 38 and 50 pin connectors is 20 lb·in (2.26 N·m).

Product installation and start-up

Product installation

Mounting

PLUS+1® 12, 24, and 50 pin modules can be mounted in one of three ways:

- End (bulkhead) installation
- Up to 3 units stacked on one another
- Individually side mounted

In each case, care must be taken to insure that the module connector is positioned so that moisture drains away from the connector. If the module is side or stack mounted, provide a drip loop in the harness. If the module is mounted vertically, the connector should be on the bottom of the module. Provide strain relief for mating connector wires.

Caution

Module damage may occur. Use caution when installing MC050-XXX modules. Due to the size of the mating connector wire bundle, it is possible to twist off the end cap of the module if excessive pressure is applied during the installation of harness strain relief.

Suggested fasteners and recommended installation torque

Mounting method	Recommended OD	Recommended torque
Bulkhead mount; multiple units stacked; single	6.0 mm (.25 in)	9.49 N·m (7 ft·lb)

Machine diagnostic connector

It is recommended that a diagnostic connector be installed on machines that are controlled by PLUS+1® modules. The connector should be located in the operator's cabin or in the area where machine operations are controlled and should be easily accessible.

Communication (software uploads and downloads and service and diagnostic tool interaction) between PLUS+1 modules and personal computers is accomplished over the vehicle CAN network. The diagnostic connector should tee into the vehicle CAN bus and have the following elements:

- CAN +
- CAN -
- CAN shield

Grounding

Proper operation of any electronic control system requires that all control modules including displays, microcontrollers and expansion modules be connected to a common ground. A dedicated ground wire of appropriate size connected to the machine battery is recommended.

Hot plugging

Machine power should be off when connecting PLUS+1® modules to mating connectors.

Recommended machine wiring guidelines

1. All wires must be protected from mechanical abuse. Wires should be run in flexible metal or plastic conduits.
2. Use 85° C [185° F] wire with abrasion resistant insulation. 105° C [221° F] wire should be considered near hot surfaces.

Product installation and start-up

3. Use a wire size that is appropriate for the module connector.
4. Separate high current wires such as solenoids, lights, alternators or fuel pumps from sensor and other noise-sensitive input wires.
5. Run wires along the inside of, or close to, metal machine surfaces where possible. This simulates a shield which will minimize the effects of EMI/RFI radiation.
6. Do not run wires near sharp metal corners. Consider running wires through a grommet when rounding a corner.
7. Do not run wires near hot machine members.
8. Provide strain relief for all wires.
9. Avoid running wires near moving or vibrating components.
10. Avoid long, unsupported wire spans.
11. All analog sensors should be powered by the sensor power source from the PLUS+1® controller and ground returned to the sensor ground pin on the PLUS+1® controller.
12. Sensor lines should be twisted about one turn every 10 cm [4 in].
13. It is better to use wire harness anchors that will allow wires to float with respect to the machine rather than rigid anchors.
14. Electronic modules should be grounded to a dedicated conductor of sufficient size that is connected to the battery (-).

Electronic components welding guidelines

Remove electronic components from the machine before any arc welding. The following is recommended when welding on a machine equipped with electronic components:

- Turn the engine off.
- Disconnect the negative battery cable from the battery.
- Do not use electronic components to ground the welder.
- Clamp the ground cable for the welder to the component that will be welded as close as possible to the weld.

PLUS+1® USB/CAN Gateway

Communication (software uploads and downloads and service and diagnostic tool interaction) between PLUS+1 modules and a personal computer (PC) is accomplished using the vehicle's PLUS+1 CAN network.

The PLUS+1 CG150 USB/CAN gateway provides the communication interface between a PC USB port and the vehicle CAN bus. When connected to a PC, the gateway acts as a USB slave. In this configuration, all required electrical power is supplied by the upstream PC host. No other power source is required.

Refer to the *PLUS+1 GUIDE Software User Manual*, literature number **10100824**, for gateway set-up information. Refer to the *CG150 USB/CAN Gateway Data Sheet*, literature number **520L0945**, for electrical specifications and connector pin details.

Products we offer:

- Bent Axis Motors
- Closed Circuit Axial Piston Pumps and Motors
- Displays
- Electrohydraulic Power Steering
- Electrohydraulics
- Hydraulic Power Steering
- Integrated Systems
- Joysticks and Control Handles
- Microcontrollers and Software
- Open Circuit Axial Piston Pumps
- Orbital Motors
- PLUS+1® GUIDE
- Proportional Valves
- Sensors
- Steering
- Transit Mixer Drives

Danfoss Power Solutions is a global manufacturer and supplier of high-quality hydraulic and electronic components. We specialize in providing state-of-the-art technology and solutions that excel in the harsh operating conditions of the mobile off-highway market. Building on our extensive applications expertise, we work closely with our customers to ensure exceptional performance for a broad range of off-highway vehicles.

We help OEMs around the world speed up system development, reduce costs and bring vehicles to market faster.

Danfoss – Your Strongest Partner in Mobile Hydraulics.

Go to www.powersolutions.danfoss.com for further product information.

Wherever off-highway vehicles are at work, so is Danfoss.

We offer expert worldwide support for our customers, ensuring the best possible solutions for outstanding performance. And with an extensive network of Global Service Partners, we also provide comprehensive global service for all of our components.

Please contact the Danfoss Power Solution representative nearest you.
