This document contains proprietary information protected by copyright. All rights are reserved. No part of this manual may be reproduced by any mechanical, electronic, or other means in any form without prior written permission of the manufacturer.

#### Disclaimer

The information in this document is subject to change without prior notice in order to improve reliability, design, and function and does not represent a commitment on the part of the manufacturer.

In no event will the manufacturer be liable for direct, indirect, special, incidental, or consequential damages arising out of the use or inability to use the product or documentation, even if advised of the possibility of such damages.

### **Environmental Responsibility**

ADLINK is committed to fulfill its social responsibility to global environmental preservation through compliance with the European Union's Restriction of Hazardous Substances (RoHS) directive and Waste Electrical and Electronic Equipment (WEEE) directive. Environmental protection is a top priority for ADLINK. We have enforced measures to ensure that our products, manufacturing processes, components, and raw materials have as little impact on the environment as possible. When products are at their end of life, our customers are encouraged to dispose of them in accordance with the product disposal and/or recovery programs prescribed by their nation or company.

### Trademarks

AMIBIOS<sup>®</sup>8 is a registered trademark of American Megatrends, Inc. COM Express<sup>™</sup>, and PICMG<sup>®</sup> are registered trademarks of the PCI Industrial Computer Manufacturers Group.

Product names mentioned herein are used for identification purposes only and may be trademarks and/or registered trademarks of their respective companies.

### Conventions

Take note of the following conventions used throughout this manual to make sure that users perform certain tasks and instructions properly.

Additional information, aids, and tips that help users perform tasks.

Information to prevent *mino*r physical injury, component damage, data loss, and/or program corruption when trying to complete a task.

Information to prevent *serious* physical injury, component damage, data loss, and/or program corruption when trying to complete a specific task.

# 1 Introduction

## 1.1 **Description**

Express-MV is a COM Express compliant module specially designed to facilitate speedy development of semi-custom designs. The COM Express standard embodies the convergence of the latest technology standards based on serial differential signaling such as PCI Express, USB 2.0, SATA, LVDS and Serial DVO implemented on a compact, 95mm x 125mm, Computer-on-Module. Signals are brought out through two 220-pin board-to-board connectors that permit data transmission rates of up to 5GHz. Mounting holes connect the module with a custom-made, application specific carrier boards which provide protection from shock and vibration.

The Express-MV combines a Penryn type Core<sup>™</sup>2 Duo CPU with Intel's Mobile GS45 Express Chipset. The chipset consisting of GS45/ICH9M Northand Southbridge supports up to 8 GB, dual channel DDR3 800/1066MHz memory on two stacked SODIMM sockets.

The Mobile Intel® GS45 Express chipset integrates a Mobile Intel® Graphics Media Accelerator 4500MHD that provides CRT, single/dual channel 24-bit LVDS and TV-out (SDTV and HDTV). The GMA 4500MHD includes support for DirectX 10, Shader Model 4.0, and provides an

increase in performance over previous chipsets. Intel® Clear Video Technology together with HDCP support allows for smooth Blu-Ray playback. In addition to the onboard integrated graphics, a PCI Express x16 graphics slot is available for connection to high end PCI Express x16 graphics chipsets or general purpose x8, x4 or x1 PCI Express devices. The PCI Express Graphics (PEG) x16 bus pinout can alternatively be used for 2 SDVO ports, two HDMI ports or three display ports mode to connect to DVI, TMDS or TV-out device controllers.

The module comes with a single onboard Gigabit Ethernet port and four SATA ports. It has optional legacy IDE support through a SATA-to-PATA controller, 32-bit PCI and LPC. The module allows connection of up to five additional PCI Express x1 devices on the ICH8M Southbridge.

The Express-MV comes equipped with a AMIBIOS8 supporting many embedded features such as: remote console, CMOS backup, CPU and system monitoring and a watchdog timer for NMI or RESET, operation over battery power, and extended power modes.

The Express-MV is a RoHS compliant and lead-free product.

# 2 Specifications

### 2.1 General

- ► CPU: Penryn Core BGA type Intel® Core ™2 Duo SP9300, FSB 1066, 2.26 GHz, 6MB L2 cache, 25 W Intel® Core ™2 Duo SL9400, FSB 1066, LV 1.86 GHz, 6MB L2 cache, 17 W Intel® Core ™2 Duo SU9300, FSB 800, ULV 1.2 GHz, 3MB L2 cache, 10 W Intel® Celeron® M 722, FSB 800, ULV 1.2GHz, 1MB L2 cache, 5.5 W
- Memory: Dual stacked SODIMM socket memory supporting dual channel memory bandwidth, for max 8 GB of non-ECC, 800/1066 MHz DDR3
- Chipset: Intel® GS45 Express Graphic Memory Controller Hub SFF (Small Form Factor) and Intel® I/O Controller Hub ICH9M-SFF
- ► L2 Cache: 1 MB (Celeron® M), 2/4 MB (Core (2) Duo)
- ▶ BIOS: AMIBIOS8 with CMOS backup in 8 Mbit SPI BIOS
- ► Hardware Monitor: Supply Voltages and CPU temperature
- Watchdog Timer: Programmable timer ranges to generate RESET
- Expansion Busses:
  - Graphics PCI Express x16 bus for SDVO/HDMI/Display Port or General Purpose PCI Express x8, x4, or x1
  - 6 PCI Express x1 (0/1/2/3/4 are free, 5 is occupied by GbE LAN), 0/1/2/3 PCIe x1 can be optionally configured as 1 x4
  - 32-bit PCI 2.3 at 33MHz, supporting 4 bus masters
  - LPC, SMBus, I2C

## 2.2 **Video**

- Chipset: GS45 GMCH integrated Mobile Intel® Graphics Media Accelerator 4500MHD with core render clock 533-MHz @ 1.05-V core voltage or 266 MHz @ 1.025 L.P. Mode
- ► CRT Interface: Analog CRT support up to QXGA, 300MHz DAC, supports CRT hot plug
- ► LVDS Interface: Single or dual channel 18/24-bit at 25~112 MHz
- TV-out: NTSC/PAL up to 1024x768 resolution supported, HDTV 480p/720p/1080i/1080p modes support (without Macrovision)

### 2.3 **Audio**

- ► Chipset: Integrated in Intel® I/O Controller Hub 9 Mobile (ICH9M)
- ► Audio Codec: HDA type on carrier

### 2.4 **LAN**

- ► Chipset: Integrated in Intel® ICH9M with Intel® 82567LM PHY
- ► Interface: 10/100/1000 Mbps Ethernet

### 2.5 Multi I/O

- ► IDE (PATA): SATA-to-PATA JM20330 controller on SATA channel 3, Master only
- ► SATA: Four ports SATA 3 Gb/s with (optional) support for RAID 0, 1, 5, 10
- ► USB: Supports up to eight ports USB v.2.0

### 2.6 Super I/O

► Connected to LPC bus on carrier if needed

## 2.7 **TPM** (Trusted Platform Module)

- ► Chipset: Infineon SLB9635TT1.2
- ► Type: TPM 1.2

### 2.8 **Power Specifications**

- ▶ Input Power: AT mode (12 V) and ATX mode (12 V and 5 V<sub>SP</sub>)
- ▶ Power Management: ACPI 3.0 compliant with battery support.

The 12V measurement is power to the module only (excluding carrier board power draw). The 5Vsb measurement (in S3/S5 mode) includes both module power consumption plus active 5Vsb powered peripherals (such as PS/2 and USB) on the carrier that are needed for wakeup. Although all voltages were measured, only 12 V and 5 VSB are relevant because they are the only ones used by the Express module. The *Idle* power level was measured under Windows XP with no applications running (login screen). *Max Load* was measured under Windows XP running Burnin software or Kpower, whichever gave the highest power consumption.

### Intel<sup>®</sup> Core™2 Duo SP9300, 2.26 GHz

Power State	+12V	+5V <sub>SB</sub>	Power Consumption
Idle (Windows XP login)	0.94 A	N.S.	11.3 W
Max. Load (Windows XP - Burnin/Kpower)	2.76 A	N.S.	33.1 W
S1 (standby powered on)	0.97 A	N.S.	11.6 W
S3 (suspend to RAM)	-	0.22 A	1.1 W
S5 (soft off)	-	0.10 A	0.5 W

### Intel<sup>®</sup> Core™2 Duo SL9400 LV, 1.86 GHz

Power State	+12V	+5V <sub>SB</sub>	Power Consumption
Idle (Windows XP login)	0.74 A	N.S.	8.9 W
Max. Load (Windows XP - Burnin/Kpower)	2.88 A	N.S.	34.6 W
S1 (standby powered on)	0.97 A	N.S.	11.6 W
S3 (suspend to RAM)	-	0.22 A	1.1 W
S5 (soft off)	-	0.10 A	0.5 W

### Intel<sup>®</sup> Core™2 Duo SU9300 ULV, 1.2 GHz

Power State	+12V	+5V <sub>SB</sub>	Power Consumption
Idle (Windows XP login)	0.68 A	N.S.	8.2 W
Max. Load (Windows XP - Burnin/Kpower)	1.44 A	N.S.	17.3 W
S1 (standby powered on)	0.85 A	N.S.	10.2 W
S3 (suspend to RAM)	-	0.22 A	1.1 W
S5 (soft off)	-	0.10 A	0.5 W

### Intel<sup>®</sup> Celeron<sup>®</sup> M 722, 1.86 GHz

Power State	+12V	+5V <sub>SB</sub>	Power Consumption
Idle (Windows XP login)	0.76A	N.S.	9.1 W
Max. Load (Windows XP - Burnin/Kpower)	1.20 A	N.S.	14.4 W
S1 (standby powered on)	0.68 A	N.S.	8.2 W
S3 (suspend to RAM)	-	0.22 A	1.1 W
S5 (soft off)	-	0.10 A	0.5 W

### **CMOS** Battery Power Consumption

Current (+3V)	Power
4.3 µA	0.0000129 W

## 2.9 **Operating Systems**

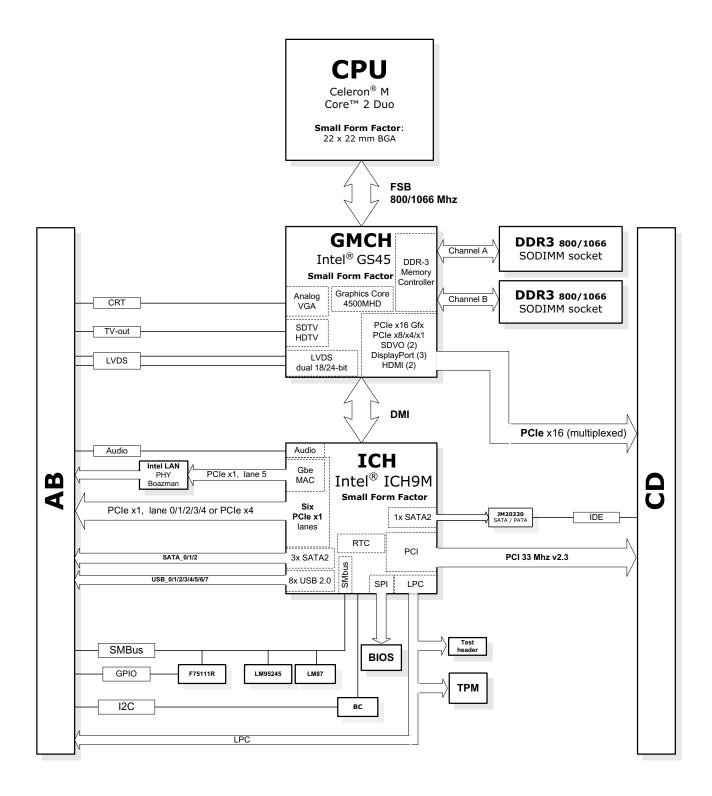

- Standard Support
  - Windows XP 32/64-bit
  - Windows Vista 32/64-bit
  - Windows Server 2003/2008
- Extended Support (BSP)
  - Embedded XP BSP
  - WinCE 6.0 BSP
  - AIDI I2C Library for Win32, WinCE and Linux

### 2.10 Mechanical and Environmental

- ► Form factor and Type: PICMG COM.0, Standard COM Express<sup>™</sup> Type II
- ► Dimensions: 95 x 125 mm
- ► Standard Operating Temperature: 0°C to 60°C
- ▶ Relative Humidity: up to 90% at 60°C

# 5 **Pinout and Signal Descriptions**

## 5.1 **COM Express<sup>™</sup> Type 2**

All pinouts on AB and CD connector of the Express-MV comply with pin-out and signal descriptions used in the original "PICMG<sup>®</sup> COM.0 R1.0: COM Express<sup>™</sup> Module Base Specification". This document contains a pinouts, signal descriptions, and mechanical characteristics of the COM Express<sup>™</sup> (Express<sup>®</sup>) form factor.

An additional document, " Express<sup>®</sup> Design Guide" gives a general introduction to carrier board designs for COM Express<sup>™</sup> (Express<sup>®</sup>) modules.

## 5.2 **Pin Definitions**

Pinouts for: Basic form factor, Type 2

	Row A	Row B		
Pin No.	Pin Name		Pin No.	Pin Name

(1) The 6th PCI Express x1 port (PCIE5) is occupied by the onboard LAN controller. For six PCI Express x1 port support from the Express-MV, please contact ADLINK for the no onboard LAN version.
 (2) The 4th SATA port (SATA3) is occupied by the onboard SATA/PATA bridge. For 4x SATA port support from the Express-MV, please contact ADLINK for the four SATA port version.

# 6 Embedded Functions

All embedded board functions on ADLINK's Computer on Modules are supported at the operating system level using the ADLINK Intelligent Device Interface (AIDI) library. The AIDI API programming interface is compatible and identical across all ADLINK Computer on Modules and all supported operating systems. The AIDI library includes a demo program to demonstrate the library's functionallity.

## 6.1 Watchdog Timer

The Express-MV implements a Watchdog timer that can be used to automatically detect software execution problems or system hangs and reset the board if necessary. The Watchdog timer consists of a counter that counts down from an initial value to zero. When the system is operating normally, the software that sets the initial value periodically resets the counter so that the it never reaches zero. If the counter reaches zero before the software resets it, the system is presumed to be malfunctioning and a reset signal is asserted.

The AIDI Library Watchdog functions support Watchdog control of the board. If the Watchdog begins countdown and reaches zero, it will access the CPU's RESET signal to reset the system. This application must call another function named AidiWDogTrigger that triggers the Watchdog to restart to prevent system reset.

AIDI Demo Program - Watchdog Tab

The AIDI Demo Program allows retrieval of the current Watchdog status and updating of the Watchdog settings

If the Watchdog is enabled, the user can click the *WDT Trigger* button to manually reset the counter and prevent the system from resetting

i ai	IDI DEMO Program

	Delay(dec): ms Delay(dec): ms					
2	Enable Disable GetConfig					
	WDT Trigger					
	Note: the sum of timeout value and delay value can't exceed MaxTimeout or MaxDelay					

## 6.2 **GPIO**

GPIO library support is limited to GPIO signals that originate from the Computer on Module and extended to the carrier board. COM Express modules support 4 GPO and 4 GPI signals. Some of ADLINK's COM Express boards can configure all 8 ports for GPI or GPO use.

GPIO signals can be monitored and controlled by using the ADLINK Intelligent Device Interface (AIDI) library that is compatible and identical across all ADLINK COM Express modules and all supported operating systems.

Pin	Signal Type #	AIDI ID (bit)	Remark
A54	GPI0	0	Express-MV can configure this pin for GPI and GPO
A63	GPI1	1	Express-MV can configure this pin for GPI and GPO
A67	GPI2	2	Express-MV can configure this pin for GPI and GPO
A85	GPI3	3	Express-MV can configure this pin for GPI and GPO
A93	GPO0	4	Express-MV can configure this pin for GPI and GPO
B54	GPO1	5	Express-MV can configure this pin for GPI and GPO
B57	GPO2	6	Express-MV can configure this pin for GPI and GPO
B63	GPO3	7	Express-MV can configure this pin for GPI and GPO

The COM Express type II standard assigns the following pins for either GPI or GPO

#### AIDI Demo Program - GPIO Tab

The AIDI Demo Program displays current GPI or GPO status and allows reading of GPI and writing to GPO.

The table above links logical port numbers in AIDI to physical port numbers on the COM Express board-to-board connector.

For boards that support *multidirection* the "SetDirection" button can configure the port for either GPI or GPO

#### 6.3 Hardware Monitoring

To ensure system health of your embedded system ADLINK's COM Express modules come with built in support for monitoring and control of CPU and system temperatures, fan speed and critical module voltage levels.

The AIDI Library provides simple APIs at the application level to support these functions and adds alarm functions when voltage or temperature levels exceeds the upper or lower limit set by the user.

On the Express-MV the following monitored values can be read from the module: CPU temperature, system temperature, Vcore, 1.8V, 5V, 3.3V and 12V.

AIDI Demo Program	III AIDI DEMO Program		
- HW Monitor Tab	Board Info StorageArea   I2C-Buses HW-Monitor GPI0   WatchDog		
Field 1 displays detected sensors (number).	Sensor Info C Temperature C Fon C Voltage Number:

Field 3 displays read out information of sensors.	Maximum Value : Minimum Value : Unit Note: Input decimal data, threshold value must higher than hysteresis value		
	Status Value: Unit: Status: Get Data		

## 7.1 System Memory Map

Address Range (dec.)	Address Range (hex)	Size	Description
(4GB – 3GB)	C0000000 - FFFFFFFF	1GB	High BIOS Area, APIC, ACPI, Express base, PCI memory resource, VGA DVMT needed memory, etc. (Note 1)
	E0000000 - EFFFFFFF	256 MB	PCI Express Base
	D0000000 - DFFFFFFF	256 MB	DVMT needed memory (Note 2)
(3GB – XXMB)	XXXXXXXX - BFFFFFF	0/32/64/128MB	Internal graphics share memory (Note 3)
15MB – 16MB	F00000 - FFFFFF	1 MB	ISA Hole
960 K – 1024 K	F0000 - FFFFF	64 KB	System BIOS Area
896 K – 960 K	E0000 - EFFFF	64 KB	Extended System BIOS Area
768 K – 896 K	C0000-DFFFF	128 KB	PCI expansion ROM area C0000 – CFFFF: Onboard VGA BIOS D0000 – D17FF: PXE option ROM when onboard LAN boot ROM is enabled.
640 K – 768 K	A0000-BFFFF	128 KB	Video Buffer & SMM space
0 K – 640 K	00000-9FFFF	640 KB	DOSArea

(1) When 4GB of memory is used, BIOS and OS will not report the full memory size. It will be reported as 3GB or less. The difference is reserved for system resources and PCI resources and not available for application use to override the stored values for system or PCI configuration.

(2) This size depends on BIOS setting for DVMT use; 256MB is the default.

(3) This size depends on BIOS setting for Integrated Graphics shared memory; 32MB,

64MB or 128MB could be occupied. Default in BIOS is 32MB.

## 7.2 Direct Memory Access Channels

Channel Number	Data Width	System Resource	Comment
0	8-bits	Parallel port	Note (1)
1	8-bits	Parallel port	Note (1)
2	8-bits	Diskette drive	Note (1)
3	8-bits	Parallel port	Note (1)
4		Reserved - cascade channel	
5	16-bits	Open	
6	16-bits	Open	
7	16-bits	Open	

(1) DMA channel 0/1/3 is selected when using parallel port. DMA2 is used by Floppy.

## 7.3 Legacy I/O Map

Address (hex)	Size	Description Comment
0020 - 0021	2 bytes	Interrupt controller
0022 – 002D	12 bytes	System reserved
002E - 002F	2 bytes	LPC SIO

# 8 **BIOS Setup Utility**

The following chapter describes basic navigation for the AMIBIOS8 BIOS setup utility for the ADLINK Express-MV COM Express module.

## 8.1 Starting the BIOS

To enter the setup screen, follow these steps:

- 1. Power on the motherboard
- 2. Press the < Delete > key on your keyboard when you see the following text prompt:

<Press DEL or Delete to run Setup>

 After you press the < Delete > key, the main BIOS setup menu displays. You can access the other setup screens from the main BIOS setup menu, such as Chipset and Power menus.

In most cases, the < Delete > key is used to invoke the setup screen. There are several cases that use other keys, such as < F1 >, < F2 >, and so on.

#### 8.1.1 Main Setup Menu

The main BIOS setup menu is the first screen that you can navigate. Each main BIOS setup menu option is described in this user's guide.

The Main BIOS setup menu screen has two main frames. The left frame displays all the options that can be configured. "Grayed" options cannot be configured, "Blue" options can be.

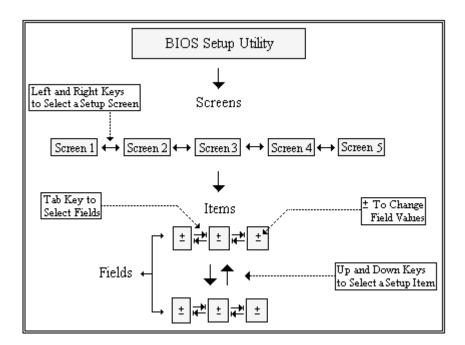

The right frame displays the key legend. Above the key legend is an area reserved for a text message. When an option is selected in the left frame, it is highlighted in white. Often a text message will accompany it.

		BIOS SE	TUP UTILITY		
Main Advanced	Power	Boot	Security	Exit	ţ
System & Board I	nfo.		Use [ENTER], [TAB] or [SHIFT-TAB] to select a field.

System Date		<b>ISun</b>	01/13/2002]		ESC Exit
v02.61	(C) Copyrig	jht 1985-2	006, America	an Meg	ratrends, Inc.

#### 8.1.2 Navigation

The BIOS setup/utility uses a key-based navigation system called hot keys. Most of the BIOS setup utility hot keys can be used at any time during the setup navigation process. These keys include < F1 >, < F10 >, < Enter >, < ESC >, < Arrow > keys, and so on.

There is a hot key legend located in the right frame on most setup screens.

Hot Key	Description
$\rightarrow \leftarrow$	Left/Right The <i>Left and Right</i> < Arrow > keys allow you to select a setup screen.
	For example: Main screen, Advanced screen, Chipset screen, and so on.
$\uparrow \downarrow$	Up/Down The Up and Down < Arrow > keys allow you to select a setup item or sub-screen.
+-	Plus/Minus The Plus and Minus < Arrow > keys allow you to change the field value of a particular
	setup item.
	For example: Date and Time.
Tab	The < Tab > key allows you to select setup fields.

The < F8 > key on your keyboard is the Fail-Safe key. It is not displayed on the key legend by default. To set the Fail-Safe settings of the BIOS, press the < F8 > key on your keyboard. It is located on the upper row of a standard 101 keyboard. The Fail-Safe settings allow the motherboard to boot up with the least amount of options set. This can lessen the probability of conflicting settings.

#### Hot Key Description

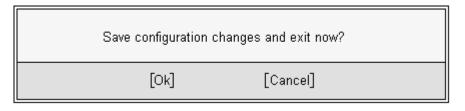

F1

The < F1 > key allows you to display the General Help screen.

Press the < F1 > key to open the *General Help screen*.

Genera	General Help				
↔ +- PGDN Home F2/F3 F8 F10	Select Screen Change Screen Next Page Go to Top of the Screen Change Colors Load Failsafe Defaults Save and Exit	↓↑ Enter PGUP End F7 F9 ESC	Select Item Go to Sub Screen Previous Page Go to Bottom of Screen Discard Changes Load Optimal Defaults Exit		
	[Ok	]			

F10 The < F10 > key allows you to save any changes you have made and exit Setup. Press the < F10 > key to save your changes. The following screen will appear:

Press the < Enter > key to save the configuration and exit. You can also use the < Arrow > key to select *Cancel* and then press the < Enter > key to abort this function and return to the previous screen.

ESC

The  $< E_{SC} >$  key allows you to discard any changes you have made and exit the Setup. Press the  $< E_{SC} >$  key to exit the setup without saving your changes. The following screen will appear:

Discard changes and exit setup now?	
[Ok]	[Cancel]

Press the < Enter > key to discard changes and exit. You can also use the < Arrow > key to select *Cancel* and then press the < Enter > key to abort this function and return to the previous screen.

Enter The < Enter > key allows you to display or change the setup option listed for a particular setup item. The < Enter > key can also allow you to display the setup sub-screens.

# 8.2 Main Setup

When you first enter the Setup Utility, you will enter the Main setup screen. You can always return to the Main setup screen by selecting the *Main* tab. There are two Main Setup options. They are described in this section. The Main BIOS Setup screen is shown below.

	E	IOS SE	TUP UTILITY		
Main Advanced	Power B	oot	Security	Exit	;
System & Board Info.					Use [ENTER], [TAB] or [SHIFT-TAB] to
Genuine Intel (R) CP	U		@ 1.200	GHz	select a field.

System Time System Date	. 00220 1115	[22:1 [Sun (	7:39] 01/13/2002]		F1 General Help F10 Save and Exit ESC Exit
v02.61	(C) Copyr ight	1985-20	006, Americ	an Meg	atrends, Inc.

# 8.2.1 System Time/System Date

Use this option to change the system time and date. Highlight *System Time* or *System Date* using the <Arrow > keys. Enter new values using the keyboard. Press the < Tab > key or the < Arrow > keys to move between fields. The date must be entered in MM/DD/YY format. The time is entered in HH:MM:SS format.

The time is in 24-hour format. For example, 5:30 A.M. appears as 05:30:00, and 5:30 P.M. as 17:30:00.

# 8.2.2 System & Board Info

The Main BIOS setup screen reports processor, memory and board information.

#### BIOS Rev.

Displays the current BIOS revision.

#### BC Firmware Rev.

Displays the current firmware revision of board controller (BC).

#### Manufacture Date

Displays the date which the board was manufactured.

#### Last Repair Date

Displays the date on which the board was last repaired.

#### Serial Number

Displays the serial number of board.

#### Hardware Rev.

The hardware revision is in XXXXX-YYYY-ZZZZ format. XXXXX represents the ADLINK internal P/N for this board. YYYY is the board PCB version and ZZZZ represents a special configuration of the board.

#### LAN MAC ID

Displays the MAC address of onboard Ethernet controller.

#### **Boot Counter**

Displays the number of times the board has been booted-up since production (max. 16777215).

#### Running Time

Displays the total time the board has been in operation since production. The units are in hours and the maximum value is 65535.

# 8.3 Advanced BIOS Setup

Select the *Advanced* tab from the setup screen to enter the Advanced BIOS Setup screen. You can select any of the items in the left frame of the screen, such as SuperIO Configuration, to go to the sub menu for that item. You can display an Advanced BIOS Setup option by highlighting it using the < Arrow > keys. The Advanced BIOS Setup screen is shown below.

The sub menus are described on the following pages.

Advanced Settings	
<ul> <li>CPU Configuration</li> <li>Chipset Configuration</li> <li>Video Function Configuration</li> <li>IDE Configuration</li> <li>Onboard Device Configuration</li> <li>USB Configuration</li> <li>PCIPnP Configuration</li> <li>Remote Access Configuration</li> <li>Trusted Computing</li> </ul>	Configure CPU. ← Select Screen 1↓ Select Item
v02.61 (C)Copyright 1985-2006, American M	Enter Go to Sub Screen F1 General Help F10 Save and Exit ESC Exit

Setting incorrect or conflicting values in Advanced BIOS Setup may cause system malfunctions.

# 8.3.1 **CPU Configuration**

# **CPU** Configuration Settings

You can use this screen to select options for the CPU Configuration Settings. Use the up and down < Arrow > keys to select an item. Use the < + > and < - > keys to change the value of the selected option. A description of the selected item appears on the right side of the screen. The settings are described on the following pages. An example of the *CPU Configuration* screen is shown below.

Advanced B	IOS SETUP UTILITY	
Configure advanced CPU setting Module Version:3F.11	S	For UP platforms, leave it enabled.
Manufacturer:Intel Genuine Intel (R) CPU Frequency :1.20GHz FSB Speed :800MHz Cache L1 :64 KB Cache L2 :3072 KB Ratio Actual Value:6	@ 1.20GHz	For DP/MP servers, it may use to tune performance to the specific application.
Hardware Prefetcher Adjacent Cache Line Prefetch Max CPUID Value Limit Intel(R) Virtualization Tech Execute-Disable Bit Capability Core Multi-Processing Intel(R) SpeedStep(tm) tech Intel(R) C-STATE tech Enhanced C-States	[Disabled] [Enabled] [Enabled] [Enabled]	<ul> <li>← Select Screen</li> <li>↑↓ Select Item</li> <li>← Change Option</li> <li>F1 General Help</li> <li>F10 Save and Exit</li> <li>ESC Exit</li> </ul>
v02.61 (C) Copyright	1985-2006, American Meç	gatrends, Inc.

#### Hardware Prefetcher

This feature is used for reducing the waiting time of DRAM. The hardware prefetcher looks for streams of data and tries to predict what data will be needed next by the processor and proactively tries to fetch these data.

#### Adjacent Cache Line Prefetch

This feature is used to enable optimal use of sequential memory access for performance purposes. Disable this setting for applications requiring high use of random memory access.

#### Max CPUID Value Limit

When the computer is boots, the operating system executes its CPUID instruction to identify the processor and its capabilities. Before it can do so, it must first query the processor to find out the highest input value the CPUID recognizes. This determines the kind of basic

information CPUID can provide the operating system. This option allows you to circumvent problems with older operating systems.

When Enabled, the processor will limit the maximum CPUID input value to 03h when queried, even if the processor supports a higher CPUID input value. When Disabled, the processor will return the actual maximum CPUID input value of the processor when queried.

#### Intel Virtualization Tech.

Intel Virtualization Technology consists of components that support virtualization of platforms based on Intel processors, thereby enabling the running of multiple operating systems and applications in independent partitions. Each partition behaves like a virtual machine (VM) and provides isolation and protection across partitions. Intel VT requires the use of a processor with Intel VT support. Additionally, a third-party VMM may also be required.

#### Execute Disable Bit

This is an Intel hardware-based security feature that can help reduce system exposure to viruses and malicious code. It allows the processor to classify areas in memory where application code can or cannot execute. When a malicious worm attempts to insert code in the buffer, the processor disables its code execution, preventing damage and worm propagation. To use Execute Disable Bit you must have a PC or server with a processor with Execute Disable Bit capability and a supporting operating system.

#### Core Multi-Processing

This item is visible depending on the CPU being used on the board. Multi-core capability of the CPU is enabled/disabled by this setting if the CPU supports this feature.

#### Intel SpeedStep Tech.

This option enables or disables Intel SpeedStep Technology.

#### Intel C-STATE Tech.

Intel C-STATE Technology is responsible for activating the processor's own power consumption management. It allows the CPU to save more power under idle mode.

#### Enhanced C-States

Enhanced C-states are available on newest mobile processors. When this option is enabled, the CPU is automatically put into the lowest frequency/voltage mode when it enters a given C-state.

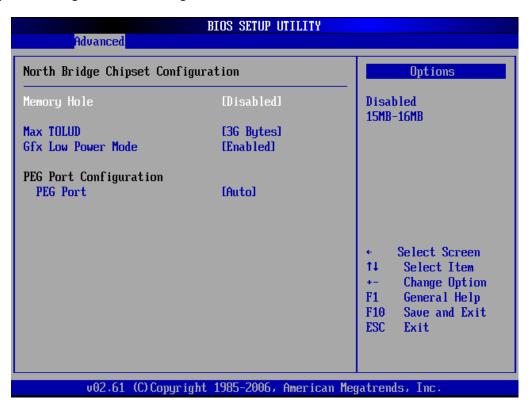

#### MPS Revision

It specifies the version of the Multi-Processor Specification (MPS) that the CPU board will use. 1.4 is the suggestion.

# 8.3.2 Chipset Configuration

#### **Chipset Configuration Settings**

#### Memory Hole

This option selects whether or not to open a memory hole. The memory hole will be located at 15MB-16MB of system memory.

#### Max TOLUD

Sets the maximum top of low usable DRAM.

#### Gfx Low Power Mode

This option is applicable for SFF only to enable low power mode.

#### **PEG** Port

Set this option to [Auto] to enable auto negotiation with a PEG device, [Enabled] to open the PEG port, or [Disabled] to disable the PEG port.

# 8.3.3 Video Function Configuration

#### Video Function Configuration Settings

You can use this screen to select options for Video Function configuration settings. The video function BIOS Setup screen is shown below.

Advanced B	IOS SETUP UTILITY	
Video Function Configuration		Select which graphics controller to use as
Boots Graphic Adapter Priority Internal Graphics Mode Select DVMT Mode Select DVMT/FIXED Memory PAVP Mode		the primary boot device.
Boot Display Device Flat Panel Type TV Standard TV Sub-Type	[CRT] [1024x768 1x18] [NTSC] [NTSC-M]	
Spread Spectrum Clock HDCP Support	[Disabled] [Disabled]	<ul> <li>← Select Screen</li> <li>↑↓ Select Item</li> <li>← Change Option</li> <li>F1 General Help</li> <li>F10 Save and Exit</li> <li>ESC Exit</li> </ul>

# **Boots Graphic Adapter Priority**

Select which graphics controller to use as the primary boot display device. IGD = Integrated Graphic device. PEG/PCI = external PCI/Express graphic device.

#### Internal Graphics Mode Select

Select the amount of system memory which is used by internal graphics device.

#### **DVMT** Mode Select

Unified Memory Architecture (UMA) is a concept whereby system memory is shared by both CPU and graphics processor. While this reduces cost, it also reduces the system's performance by taking up a large portion of memory for the graphics processor. Intel's Dynamic Video Memory Technology (DVMT) takes that concept further by allowing the system to dynamically allocate memory resources according to the demands of the system at any point in time. The key idea in DVMT is to improve the efficiency of the memory allocated to either system or graphics processor.

When set to Fixed Mode, the graphics driver will reserve a fixed portion of the system memory as graphics memory. When set to DVMT Mode, the graphics chip will dynamically allocate system memory as graphics memory, according to system and graphics

requirements. When set to Combo Mode, the graphics driver will allocate a fixed amount of memory as dedicated graphics memory, as well as allow more system memory to be dynamically allocated between the graphics processor and the operating system.

# **DVMT/FIXED Memory**

Sets the amount of memory according to DVMT Mode Select.

#### PAVP Mode

PAVP (Protected Audio Video Path) is a feature to ensure a robust and secure content protection path for high-definition video playback including Blu-ray discs on the Microsoft Windows Vista operating system. It can reduce processor utilization by off-loading the video decode onto the chipset to free up the processor to perform other tasks. Select Lite mode if want to use the PAVP feature.

#### **Boot Display Device**

Selects the display interface you want to make active on boot-up.

#### Flat Panel Type

When LVDS is selected from Boot Display Device, this option allows you to select resolution settings for correct timing to the LVDS interface you want to use. The supported resolutions are: 640x480 18-bit 1Ch, 800x600 18-bit 1Ch, 1024x768 18-bit 1Ch, 1024x768 24-bit 1Ch, 1280x800 24-bit 1Ch, 1280x1024 18-bit 2Ch, 1280x1024 24-bit 2Ch, 1400x1050 18-bit 2Ch, 1400x1050 24-bit 2Ch, 1600x1200 18-bit 2Ch, 1600x1200 24-bit 2Ch, 1680x1050 18-bit 2Ch, 1920x1200 18-bit 2Ch, 1920x1200 24-bit 2Ch, 2048x1536 24-bit 2Ch.

#### **Boot Display Device**

Selects the display interface you want to make active on boot-up.

#### TV Standard

Selects the TV standard.

#### TV Sub-Type

Selects sub-type of the TV standard.

#### Spread Spectrum Clock

This option enables/disables the spread spectrum of Gfx.

# **HDCP** Support

Enables/Disables High-bandwidth Digital Content Protection (HDCP) support.

# 8.3.4 **IDE Configuration**

#### **IDE** Configuration Settings

You can use this screen to select options for the IDE Configuration Settings. An example of the *IDE Configuration* screen is shown below.

IDE Configuration		Options
<ul> <li>SATA#1 Configuration Configure SATA#1 as</li> <li>SATA#2 Configuration</li> <li>Primary IDE Master</li> <li>Primary IDE Slave</li> <li>Secondary IDE Master</li> <li>Secondary IDE Slave</li> <li>Third IDE Master</li> </ul>	[Compatible] [IDE] [Enhanced] : [Not Detected] : [Not Detected] : [Not Detected] : [Not Detected] : [Not Detected] : [Not Detected]	No Use Use
▶ Fourth IDE Master IDE Device Use	: [Not Detected] [Use]	<ul> <li>← Select Screen</li> <li>↑↓ Select Item</li> <li>+- Change Option</li> <li>F1 General Help</li> <li>F10 Save and Exit</li> <li>ESC Exit</li> </ul>

#### SATA#1 Configuration

This item specifies whether SATA Channel 1 is initialized in Compatible or Enhanced mode of operation. The settings are Disabled, Compatible and Enhanced.

# Configure SATA#1 as

When running in Compatible/Enhanced mode, the SATA Channel 1 can be configured as a legacy IDE channel, RAID (RAID0, RAID1 only), and AHCI mode.

# SATA#2 Configuration

This item specifies whether the SATA Channel 2 is initialized in Enhanced mode of operation.

# Primary IDE Master/Slave, Secondary IDE Master/Slave

Select one of the hard disk drives to configure it. Press < Enter > to access its sub menu.

# Hot Plug

This option enables/disables the AHCI hotswap function (only visible when *Configure SATA#1 as* is set to AHCI).

# IDE Device Use

Set this option to determine if IDE devices are used.

# 8.3.5 **Onboard Device Configuration**

# **Onboard Device Configuration Settings**

You can use this screen to specify options for the Onboard Device Configuration settings. The screen is shown below.

Advanced	BIOS SETUP UTILITY	
Onboard Device Configurati	ion	Options
GbE Controller GbE LAN Boot GbE Wake Up From S5 HDA Controller SMBUS Controller > SuperIO Configuration	[Enabled] [Disabled] [Disabled] [Disabled] [Enabled]	Enabled Disabled
		<ul> <li>← Select Screen</li> <li>↑↓ Select Item</li> <li>+- Change Option</li> <li>F1 General Help</li> <li>F10 Save and Exit</li> <li>ESC Exit</li> </ul>
v02.61 (C) Copyr i	ight 1985-2006, America	n Megatrends, Inc.

#### **GbE** Controller

Set this value to Enable/Disable the onboard GbE controller.

#### **GbE LAN Boot**

Set this value to Enable/Disable the PXE function of the onboard GbE controller.

#### GbE Wake Up From S5

Set this value to Enable/Disable the GbE wake up system from S5 power mode.

#### HDA Controller

Set this value to Enable/Disable the onboard HDA Controller.

#### SMBusController

Set this value to Enable/Disable the SMBus controller.

# SuperIO Configuration Screen

SuperIO configuration screen is a sub-menu of Onboard Device Configuration. You can use this screen to select options for the Super IO settings. Use the up and down < Arrow > keys to select an item. Use the < + > and < - > keys to change the value of the selected option. The settings are described on the following pages. The screen is shown below. The visibility of this SuperIO configuration screen depends on the presence of an onboard SuperIO (Winbond W83627HF). If the Express-MV is used on a carrier w/o a SIO chip, the legacy-free mode will take effect.

Configure Win627 Super IO Ch	nipset	Allows BIOS to Enable
OnBoard Floppy Controller Floppy Drive Swap Serial Port1 Address Serial Port2 Address Serial Port2 Mode Parallel Port Address Parallel Port Mode Parallel Port IRQ Floppy A Floppy B • Hardware Health Configurat	Enabled] Disabled] GF8/IRQ4] C2F8/IRQ3] [Normal] G378] [Normal] LIRQ7] [1.44 MB 3½"] Disabled]	<ul> <li>→ Or Disable Floppy Controller.</li> <li>★ Select Screen</li> <li>↑↓ Select Item</li> <li>+→ Change Option</li> <li>F1 General Help</li> <li>F10 Save and Exit</li> <li>ESC Exit</li> </ul>

# **OnBoard Floppy Controller**

This option enables/disables the Super IO's floppy controller.

# Floppy Drive Swap

This option allows you to determine whether or not to enable Floppy Drive Swap function. Enabling it will swap floppy drive assignments so that Drive A becomes Drive B, and Drive B becomes Drive A.

# Serial Port1 Address

Option	Description
Disabled	Set this value to prevent the serial port from accessing any system resources. When this option is set to Disabled, the serial port physically becomes unavailable.
3F8/IRQ4	Set this value to allow the serial port to use 3F8 as its I/O port address and IRQ 4 for the interrupt address.
3E8/IRQ4	Set this value to allow the serial port to use 3E8 as its I/O port address and IRQ 4 for the interrupt address.
2F8/IRQ3	Set this value to allow the serial port to use 2F8 as its I/O port address and IRQ 3 for the interrupt address.
2E8/IRQ3	Set this value to allow the serial port to use 2E8 as its I/O port address and IRQ 3 for the interrupt address.

This option specifies the base I/O port address and Interrupt Request address of serial port 1.

# Serial Port2 Address

This option specifies the base I/O port address and Interrupt Request address of Serial Port2. The settings of Serial Port2 are the same as Serial Port1. However, the setting used by Serial Port1 will not be available for Serial Port2. For example, if Serial Port1 uses 3F8/IRQ4, the option, the 3F8/IRQ4 will not appear in the options of Serial Port2.

#### Serial Port2 Mode

This option allows the BIOS to select a mode for Serial Port2. The settings are Normal, IrDA, and ASK IR.

# Parallel Port Address

This option lets to configure the SuperIO's parallel port address.

# Parallel Port Mode

This option specifies the parallel port mode.

Option	Description
Normal	Set this value to allow the standard parallel port mode to be used.
EPP	The parallel port can be used with devices that adhere to the Enhanced Parallel Port (EPP) specification. EPP uses the existing parallel port signals to provide asymmetric bidirectional data transfer driven by the host device.
ECP	The parallel port can be used with devices that adhere to the Extended Capabilities Port (ECP) specification. ECP uses the DMA protocol to achieve data transfer rates up to 2.5 Megabits per second. ECP provides symmetric Bidirectional communication.
EPP+ECP	Allows the parallel port to support both the ECP and EPP modes simultaneously.

# Parallel Port IRQ

This option specifies the IRQ used by the parallel port.

Option	Description
IRQ5	Set this value to allow the serial port to use Interrupt 5.
IRQ7	Set this value to allow the serial port to use Interrupt 7. The majority of parallel ports on computer
	systems use IRQ7 and I/O Port 378H as the standard setting.

# Floppy Drive A/B:

Move the cursor to these fields via up and down < arrow > keys. Select the floppy type. The Optimal and Fail-Safe settings for floppy drive A: is *1.44 MB 3½*".

Option	Description
Disabled	Set this value to prevent the use of the selected floppy disk drive channel. This option should be set if no floppy disk drive is installed on the specified channel.
360 KB 5 ¼"	Set this value if the floppy disk drive attached to the corresponding channel is a 360 KB 5 <sup>1</sup> / <sub>4</sub> " floppy disk drive.
1.2 MB 5 ¼"	Set this value if the floppy disk drive attached to the corresponding channel is a 1.2 MB 5 <sup>1</sup> / <sub>4</sub> " floppy disk drive.
720 KB 3 ½"	Set this value if the floppy disk drive attached to the corresponding channel is a 720 KB 3 <sup>1</sup> / <sub>2</sub> " floppy disk drive.
1.44 MB 3 ½"	Set this value if the floppy disk drive attached to the corresponding channel is a 1.44 MB 3 <sup>1</sup> / <sub>2</sub> " floppy disk drive. This is the default setting for <i>Floppy Drive A</i> .
2.88 MB 3 ½"	Set this value if the floppy disk drive attached to the corresponding channel is a 2.88 MB $3\frac{1}{2}$ " floppy disk drive.

# Hardware Health Configuration

The hardware health on SuperIO only supports FAN speed monitoring.

Advanced		
Hardware Health Eve	nt Monitoring	
Fan1 Speed Fan2 Speed Fan3 Speed	:0 RPM :0 RPM :5625 RPM	<ul> <li>← Select Screen</li> <li>↑↓ Select Item</li> <li>F1 General Help</li> <li>F10 Save and Exit</li> <li>ESC Exit</li> </ul>

# 8.3.6 **USB Configuration**

#### **USB** Configuration Settings

You can use this screen to specify options for the USB configuration Settings. Use the up and down < Arrow > keys to select an item. Use the < + > and < - > keys to change the value of the selected option. The settings are described on the following pages. The screen is shown below.

USB Configuration	Options
Module Version - 2.24.0-11.4 USB Devices Enabled :	Disabled 2 USB Ports 4 USB Ports
1 Mouse, 1 Drive	6 USB Ports 8 USB Ports
USB Functions[8 USB Ports]USB 2.0 Controller[Enabled]Legacy USB Support[Enabled]USB 2.0 Controller Mode[FullSpeed]BIOS EHCI Hand-Off[Enabled]	
▶ USB Mass Storage Device Configuration	<ul> <li>← Select Screen</li> <li>↑↓ Select Item</li> <li>+- Change Option</li> <li>F1 General Help</li> <li>F10 Save and Exit</li> <li>ESC Exit</li> </ul>

# **USB** Function

Set this value to allow the system to Disable, Enable, and select a set number of onboard USB ports.

# USB 2.0 Controller

This option depends on the setting of USB Function above. If USB Function is set to Disabled, this option will have no effect. Enabled will open USB 2.0 functionality to all USB ports.

# Legacy USB Support

Legacy USB Support refers to USB mouse and keyboard support. Normally if this option is not enabled, any attached USB mouse or keyboard will not become available until a USB compatible operating system is fully booted with all USB drivers loaded. When this option is enabled, any attached USB mouse or keyboard can control the system even when there is no USB driver loaded on the system. Set this value to enable or disable the Legacy USB Support (see below).

Option	Description
Disabled	Set this value to prevent the use of any USB device in DOS or during system boot.
Enabled	Set this value to allow the use of USB devices during boot and while using DOS.
Auto	This option auto detects USB Keyboards or Mice and if found, allows them to be utilized during boot and while using DOS.

# Port 64/60 Emulation

It uses USB to receive the IO port 64/60 trap to emulate the legacy keyboard controller.

#### USB 2.0 Controller Mode

The USB 2.0 Controller Mode configures the data rate of the USB port. The options are FullSpeed (12 Mbps) and HiSpeed (480 Mbps).

# **BIOS EHCI** hand-off

This option provides a work around for OSes without ECHI hand-off support. The EHCI ownership change should be claimed by the EHCI driver.

# USB Mass Storage Device Configuration

This is a submenu for configuring the USB Mass Storage Class Devices when BIOS finds they are in use on the USB ports. Emulation Type can be set according to the type of attached USB mass storage device(s). If set to Auto, USB devices less than 530MB will be emulated as Floppy and those greater than 530MB will remain as hard drive. The Forced FDD option can be used to force a hard disk type drive (such as a Zip drive) to boot as FDD.

BIOS SETUP UTILITY COMPANY AND A DESCRIPTION OF A DESCRIP				
USB Mass Storage Device Configuration	Number of seconds			
USB Mass Storage Reset Delay [20 Sec]	<ul> <li>POST waits for the</li> <li>USB mass storage</li> <li>device after start</li> </ul>			
Device #1 USB Flash Disk Emulation Type [Auto]	unit command.			

# 8.3.7 **PCIPnP Configuration**

#### **PCIPnP Configuration Settings**

You can display a Plug and Play BIOS Setup option by highlighting it using the < Arrow > keys to select an item. The Plug and Play BIOS Setup screen is shown below.

Advanced PCI/PnP Setting	Value in units of PCI	
WARNING: Setting wrong v may cause syste	clocks for PCI device latency timer register.	
PCI Latency Timer	[64]	
Palette Snooping	[Disabled]	
IRQ3	[Available]	
IRQ4	[Available]	
IRQ5	[Ava i lable]	
IRQ7	[Ava i lable]	
IRQ9	[Ava i lable]	← Select Screen
IRQ10	[Ava i lable]	↑↓ Select Item
IRQ11	[Ava i lable]	+- Change Option
IRQ14	[Ava i lable]	F1 General Help
IRQ15	[Available]	F10 Save and Exit
		ESC Exit

#### **PCI** Latency Timer

Set this value to allow the PCI Latency Timer to be adjusted. This option sets the latency of all PCI devices on the PCI bus.

# Palette Snooping

Set this value to allow the system to modify the Palette Snooping settings.

Disabled - should not be changed unless the VGA card manufacturer requires Palette Snooping to be Enabled.

Enabled - This setting informs the PCI devices that an ISA based Graphics device is installed in the system. It does this so the ISA based Graphics card will function correctly. This does not necessarily indicate a physical ISA adapter card. The graphics chipset can be mounted on a PCI card. Always check with your adapter card's manuals first, before modifying the setting in the BIOS.

#### IRQ

Set this value to allow the IRQ settings to be modified.

Available - This setting allows the specified IRQ to be used by a PCI/PnP device.

Reserved - This setting allows the specified IRQ to be used by a legacy ISA device.

# 8.3.8 **Remote Access Configuration**

#### Remote Access (Console Redirection)

Remote Access (or Console Redirection) allows you to control a system from a remote location by re-directing keyboard input and text output through the serial port. This screen will not be visible if the module is used on a carrier board w/o a SuperIO chip, due to lack of serial port support.

Advanced	BIOS SETUP UTILITY	
Configure Remote Access type Remote Access Serial port number Base Address, IRQ Serial Port Mode Flow Control Redirection After BIOS POST Terminal Type UT-UIF8 Combo Key Support Sredir Memory Display Delay	EnabledJ [COM1] [3F8h, 4] [115200 8,n,1] [None] [Always] [ANSI] [Enabled]	<ul> <li>If you ever change COM port configuration, please reboot system and enter setup again. v02.61 (C) Copyrigh	t 1985-2006, American M	egatrends, Inc.

#### **Remote Access**

Select this option to Enable or Disable the BIOS remote access feature here.

Enabling Remote Access requires a dedicated serial port connection. Once both serial ports are configured to disabled, you should set this value to Disabled or it may cause an abnormal boot.

# Serial Port Number

Select the serial port you want to use for the remote access interface. You can set the value for this option to either COM1 or COM2.

If you have changed the resource assignment of the serial ports in Advanced>Onboard Device Configuration>SuperIO Configuration, you must Save Changes and Exit, reboot the system, and enter the setup menu again in order to see those changes reflected in the available Remote Access options.

# Serial Port Mode

Select the baud rate you want the serial port to use for console redirection. The options are 115200 8,n,1; 57600 8,n,1; 19200 8,n,1; and 09600 8,n,1.

# Flow Control

Set this option to select Flow Control for console redirection. The settings for this value are None, Hardware, or Software.

# **Redirection After BIOS POST**

This option allows you to set Redirection configuration after BIOS POST. The settings for this value are Disabled, Boot Loader, or Always.

Option	Description
Disabled	Set this value to turn off the redirection after POST
Boot Loader	Set this value to allow the redirection to be active during POST and Boot Loader.
Always	Set this value to allow the redirection to be always active.

# Terminal Type

This option is used to select either VT100/VT-UTF8 or ANSI terminal type. The settings for this value are ANSI, VT100, or VT-UTF8.

# VT-UTF8 Combo Key Support

This option enables VT-UTF8 Combination Key Support for ANSI/VT100 terminals. The settings for this value are Enabled or Disabled.

#### Sredir Memory Display Delay

This option gives the delay in seconds to display memory information. The options for this value are No Delay, Delay 1 Sec, Delay 2 Sec, or Delay 4 Sec.

# 8.3.9 Trusted Computing

Trusted Computing is an industry standard to make personal computers more secure through a dedicated hardware chip, called a Trusted Platform Module (TPM). This option allows you to enable or disable the TPM support.

Advanced	BIOS SETUP UTILITY	
Trusted Computing	Enable/Disable TPM	
TCG/TPM SUPPORT	[Yes]	- TCG (TPM 1.1/1.2) supp in BIOS

# 8.4.1 ACPI Configuration

# Advanced ACPI Configuration

You can use this screen to select options for the ACPI Advanced Configuration Settings. Use the up and down < Arrow > keys to select an item. Use the < + > and < - > keys to change the value of the selected option. A description of the selected item appears on the right side of the screen. The settings are described on this page. The screen is shown below.

Power	BIOS SETUP UTILITY	
ACPI Settings		Select the ACPI
Suspend mode ACPI APIC support	[S1 (POS)] [Enabled]	<ul> <li>state used for</li> <li>System Suspend.</li> </ul>
Restore on AC Power Loss	[Last State]	
		<ul> <li>← Select Screen</li> <li>↑↓ Select Item</li> <li>+- Change Option</li> <li>F1 General Help</li> <li>F10 Save and Exit</li> <li>ESC Exit</li> </ul>

#### Suspend Mode

This setting selects either S1 (POS) or S3 (STR) system suspend mode.

Option	Description
S1 (POS)	Power On Suspend - Under this setting the CPU is not executing instructions, all power resources that supply system level reference of S0 are off, system memory context is maintained, devices that reference power resources that are on are on, and devices that can wake-up the system can cause the cpu to continue to execute from where it left off.
S3 (STR)	Suspend to RAM - Under this setting the system enters a low power state instead of being completely shut off. This allows the computer system to boot up in a few seconds.

# ACPI APIC Support

This setting allows you to enable or disable ACPI APIC support. The ACPI APIC table pointer is included in the RSDT pointer list.

#### Restore on AC Power Loss

Determines what state the computer enters when AC power is restored after a power loss. The options for this value are Last State, Power On and Power Off.

Option	Description
Power Off	Set this value to always power off the system while AC power is restored.
Power On	Set this value to always power on the system while AC power is restored.
Last State	Set this value to power off/on the system depending on the last system power state while AC power is restored.

# 8.4.2 Hardware Health Configuration

	v02.61 (	C) Copyr igl	ht 1985-	2006, Americ	an Meç	jatrends, Inc.

# **Boot Settings Configuration**

Use this screen to select options for the Boot Settings Configuration. Use the up and down <Arrow> keys to select an item. Use the <Plus> and <Minus> keys to change the value of the selected option. The settings are described on the following pages. The screen is shown below.

	BIOS SETUP UTILITY Boot	
Boot Settings Configura	Allows BIOS to skip —— certain tests while	
Quick Boot Quiet Boot Bootup Num-Lock	[Enabled] [Disabled] [On]	booting. This will decrease the time needed to boot the system.
		<ul> <li>← Select Screen</li> <li>↑↓ Select Item</li> <li>+- Change Option</li> <li>F1 General Help</li> <li>F10 Save and Exit</li> <li>ESC Exit</li> </ul>
v02.61 (C) Cop	yright 1985-2006, America	an Megatrends, Inc.

#### Quick Boot

Disabled - Set this value to allow the BIOS to perform all POST tests. Enabled - Set this value to allow the BIOS to skip certain POST tests to boot faster.

#### Quiet Boot

Disabled - Set this value to allow the computer system to display the POST messages. Enabled - Set this value to allow the computer system to display the OEM logo.

#### **Bootup Num-Lock**

Set this value to allow the Number Lock setting to be modified during boot up. Off - This option does not enable the keyboard Number Lock automatically. To use the 10-keys on the keyboard, press the Number Lock key located on the upper left-hand corner of the 10-key pad. The Number Lock LED on the keyboard will light up when the Number Lock is engaged. On - Set this value to allow the Number Lock on the keyboard to be enabled automatically when the computer system is boot up. This allows the immediate use of 10-keys numeric keypad located on the right side of the keyboard. To confirm this, the Number Lock LED light on the keyboard will be lit.

#### **Boot Device Priority**

Set the boot device options to determine the sequence in which the computer checks which device to boot from.

#### **Boot Device Groups**

The Boot devices are listed in groups by device type. First press <Enter> to enter the sub-menu. Then you may use the arrow keys to select the desired device, then press <+>, <-> or <PageUp>, <PageDown> key to move it up/down in the priority list. For example, USB storage disks will be listed as "USB Drives" in the sub-menu as below. Only the first device in each device group will be available for selection in the Boot Device Priority option.

	BIOS SETUP UTILITY Boot	
USB Drives		Specifies the boot

v02.61 ((	)) Copyr ight	1985-2006, America	an Meg	atrends, Inc.

#### 8.6.1 Password Support

#### Two Levels of Password Protection

Provides both a Supervisor and a User password. If you use both passwords, the Supervisor password must be set first.

The system can be configured so that all users must enter a password every time the system boots or when Setup is executed, using either or either the Supervisor password or User password.

The Supervisor and User passwords activate two different levels of password security. If you select password support, you are prompted for a one to six character password. Type the password on the keyboard. The password does not appear on the screen when typed. Make sure you write it down. If you forget it, you must drain NVRAM and re-configure.

#### Remember the Password

Keep a record of the new password when the password is changed. If you forget the password, you must erase the system configuration information in NVRAM.

Select Security Setup from the Setup main BIOS setup menu. Security Setup options, such as password protection and virus protection, are described in this section. To access the sub menu for the following items, select the item and press < Enter >:o Change Supervisor Password

- Change User Password

- Clear User Password

#### Supervisor Password

Indicates whether a supervisor password has been set.

# **User Password**

Indicates whether a user password has been set.

#### Change Supervisor Password

Select this option and press < Enter > to access the sub menu. You can use the sub menu to change the supervisor password.

#### Change User Password

Select this option and press < Enter > to access the sub menu. You can use the sub menu to change the user password.

#### Clear User Password

Select this option and press < Enter > to access the sub menu. You can use the sub menu to clear the user password.

#### 8.6.2 Change Supervisor Password

Select Change Supervisor Password from the Security Setup menu and press < Enter >.

Enter New Password:

Type the password and press < Enter >. The screen does not display the characters entered. Retype the password as prompted and press < Enter >. If the password confirmation is incorrect, an error message appears. The password is stored in NVRAM after setup completes.

# 8.6.3 Change User Password

Select Change User Password from the Security Setup menu and press < Enter >.

Enter New Password:

Type the password and press < Enter >. The screen does not display the characters entered. Retype the password as prompted and press < Enter >. If the password confirmation is incorrect, an error message appears. The password is stored in NVRAM after setup completes.

# 8.6.4 Clear User Password

Select Clear User Password from the Security Setup menu and press < Enter >.

Clear New Password

[Ok] [Cancel]

Type the password and press < Enter >. The screen does not display the characters entered. Retype the password as prompted and press < Enter >. If the password confirmation is incorrect, an error message appears. The password is stored in NVRAM after setup completes.

# 8.7 Exit Menu

Select the *Exit* tab from the setup screen to enter the Exit BIOS Setup screen. You can display an Exit BIOS Setup option by highlighting it using the < Arrow > keys. The Exit BIOS Setup screen is shown below.

			BIOS S	ETUP UTILITY		
Main	Advanced	Power	Boot	Security	Exit	
Exit O	ptions					Exit system setup after saving the
	hanges and E d Changes an					changes.
	d Changes					F10 key can be used for this operation.

						← Select Screen
						↑↓ Select Item Enter Go to Sub Screen
						F1 General Help F10 Save and Exit
						ESC Exit
	v02.61 (	C) Copyr igl	ht 1985-	2006, America	ın Meg	atrends, Inc.

#### Save Changes and Exit

When you have completed the system configuration changes, select this option to leave Setup and reboot the computer so the new system configuration parameters can take effect. Select Exit Saving Changes from the Exit menu and press < Enter >.

Save Configuration Changes and Exit Now?

[Ok] [Cancel]

appears in the window. Select Ok to save changes and exit.

# Discard Changes and Exit

Select this option to quit Setup without making any permanent changes to the system configuration. Select Exit Discarding Changes from the Exit menu and press <Enter>.

Discard Changes and Exit Setup Now?

[Ok] [Cancel]

appears in the window. Select Ok to discard changes and exit.

# **Discard Changes**

Select Discard Changes from the Exit menu and press < Enter >.

Select Ok to discard changes.

# Load Optimal Defaults

Automatically sets all Setup options to a complete set of default settings when you Select this option. The Optimal settings are designed for maximum system performance, but may not work best for all computer applications. In particular, do not use the Optimal Setup options if your computer is experiencing system configuration problems.

Select Load Optimal Defaults from the Exit menu and press < Enter >.

Select *Ok* to load optimal defaults.

# Load Failsafe Defaults

Automatically sets all Setup options to a complete set of default settings when you Select this option. The Failsafe settings are designed for maximum system stability, but not maximum performance. Select the Fail-Safe Setup options if your computer is experiencing system configuration problems.

Select Load Fail-Safe Defaults from the Exit menu and press < Enter >.

```
Load Fail-Safe Defaults?
```

[Ok] [Cancel]

appears in the window. Select Ok to load Fail-Safe defaults.

# 9 **BIOS Checkpoints, Beep Codes**

This section of this document lists checkpoints and beep codes generated by AMIBIOS. The checkpoints defined in this document are inherent to the AMIBIOS generic core, and do not include any chipset or board specific checkpoint definitions.

# **Checkpoints and Beep Codes Definition**

A checkpoint is either a byte or word value output to I/O port 80h. The BIOS outputs checkpoints throughout bootblock and Power-On Self Test (POST) to indicate the task the system is currently executing. Checkpoints are very useful for debugging problems that occur during the preboot process.

Beep codes are used by the BIOS to indicate a serious or fatal error. They are used when an error occurs before the system video has been initialized, and generated by the system board speaker.

#### **Viewing BIOS Checkpoints**

Viewing all checkpoints generated by the BIOS requires a checkpoint card, also referred to as a "POST Card" or "POST Diagnostic Card". These are ISA or PCI add-in cards that show the value of I/O port 80h on a LED display.

Some computers display checkpoints in the bottom right corner of the screen during POST. This display method is limited, since it only displays checkpoints that occur after the video card has been activated.

Keep in mind that not all computers using AMIBIOS enable this feature. In most cases, a checkpoint card is the best tool for viewing AMIBIOS checkpoints.

# 9.1 Bootblock Initialization Code Checkpoints

The Bootblock initialization code sets up the chipset, memory and other components before system memory is available. The following table describes the type of checkpoints that may occur during the bootblock initialization portion of the BIOS:

Checkpoints may differ between different platforms based on system configuration. Checkpoints may change due to vendor requirements, system chipset or option ROMs from add-in PCI devices.

Checkpoint	Description
Before D0	If boot block debugger is enabled, CPU cache-as-RAM functionality is enabled at this point. Stack will be enabled from this point.
D0	Early Boot Strap Processor (BSP) initialization like microcode update, frequency and other CPU critical initialization. Early chipset initialization is done.
D1	Early super I/O initialization is done including RTC and keyboard controller. Serial port is enabled at this point if needed for debugging. NMI is disabled. Perform keyboard controller BAT test. Save power-on CPUID value in scratch CMOS. Go to flat mode with 4GB limit and GA20 enabled.
D2	Verify the boot block checksum. System will hang here if checksum is bad.
D3	Disable CACHE before memory detection. Execute full memory sizing module. If memory sizing module not executed, start memory refresh and do memory sizing in Boot block code. Do additional chipset initialization. Re-enable CACHE. Verify that flat mode is enabled.
D4	Test base 512KB memory. Adjust policies and cache first 8MB. Set stack.
D5	Bootblock code is copied from ROM to lower system memory and control is given to it. BIOS now executes out of RAM. Copies compressed boot block code to memory in right segments. Copies BIOS from ROM to RAM for faster access. Performs main BIOS checksum and updates recovery status accordingly.
D6	Both key sequence and OEM specific method is checked to determine if BIOS recovery is forced. If BIOS recovery is necessary, control flows to checkpoint E0. See Bootblock Recovery Code Checkpoints section of document for more information.
D7	Restore CPUID value back into register. The Bootblock-Runtime interface module is moved to system memory and control is given to it. Determine whether to execute serial flash.
D8	The Runtime module is uncompressed into memory. CPUID information is stored in memory.
D9	Store the Uncompressed pointer for future use in PMM. Copying Main BIOS into memory. Leaves all RAM below 1MB Read-Write including E000 and F000 shadow areas but closing SMRAM.
DA	Restore CPUID value back into register. Give control to BIOS POST (ExecutePOSTKernel). See POST Code Checkpoints section of document for more information.
DC	System is waking from ACPI S3 state
E1-E8, EC-EE	OEM memory detection/configuration error. This range is reserved for chipset vendors & system manufacturers. The error associated with this value may be different from one platform to the next.

# 9.2 Bootblock Recovery Code Checkpoints

The Bootblock recovery code gets control when the BIOS determines that a BIOS recovery needs to occur because the user has forced the update or the BIOS checksum is corrupt. The following table describes the type of checkpoints that may occur during the Bootblock recovery portion of the BIOS:

Checkpoints may differ between different platforms based on system configuration. Checkpoints may change due to vendor requirements, system chipset or option ROMs From add-in PCI devices.

Checkpoint	Description
EO	Initialize the floppy controller in the super I/O. Some interrupt vectors are initialized. DMA controller is initialized. 8259 interrupt controller is initialized. L1 cache is enabled.
E9	Set up floppy controller and data. Attempt to read from floppy.
EA	Enable ATAPI hardware. Attempt to read from ARMD and ATAPI CDROM.
EB	Disable ATAPI hardware. Jump back to checkpoint E9.
EF	Read error occurred on media. Jump back to checkpoint EB.
F0	Search for pre-defined recovery file name in root directory.
F1	Recovery file not found.
F2	Start reading FAT table and analyze FAT to find the clusters occupied by the recovery file.
F3	Start reading the recovery file cluster by cluster.
F5	Disable L1 cache.
FA	Check the validity of the recovery file configuration to the current configuration of the flash part.
FB	Make flash write enabled through chipset and OEM specific method. Detect proper flash part. Verify that the found flash part size equals the recovery file size.
F4	The recovery file size does not equal the found flash part size.
FC	Erase the flash part.
FD	Program the flash part.
FF	The flash has been updated successfully. Make flash write disabled. Disable ATAPI hardware. Restore CPUID value back into register. Give control to F000 ROM at F000:FFF0h.

## 9.3 **POST Code Checkpoints**

The POST code checkpoints are the largest set of checkpoints during the BIOS preboot process. The following table describes the type of checkpoints that may occur during the POST portion of the BIOS:

Checkpoints may differ between different platforms based on system configuration. Checkpoints may change due to vendor requirements, system chipset or option ROMs From add-in PCI devices.

Checkpoint	Description	
03	Disable NMI, Parity, video for EGA, and DMA controllers. Initialize BIOS, POST, Runtime data area. Also initialize BIOS modules on POST entry and GPNV area. Initialized CMOS as mentioned in the Kernel Variable "wCMOSFlags."	
04	Check CMOS diagnostic byte to determine if battery power is OK and CMOS checksum is OK. Verify CMOS checksum manually by reading storage area. If the CMOS checksum is bad, update CMOS with power-on default values and clear passwords. Initialize status register A. Initializes data variables that are based on CMOS setup questions. Initializes both the 8259 compatible PICs in the system	
05	Initializes the interrupt controlling hardware (generally PIC) and interrupt vector table.	
06	Do R/W test to CH-2 count reg. Initialize CH-0 as system timer.Install the POSTINT1Ch handler. Enable IRQ-0 in PIC for system timer interrupt. Traps INT1Ch vector to "POSTINT1ChHandlerBlock."	
07	Fixes CPU POST interface calling pointer.	
08	Initializes the CPU. The BAT test is being done on KBC. Program the keyboard controller command byte is being done after Auto detection of KB/MS using AMI KB-5.	
C0	Early CPU Init Start Disable Cache – Init Local APIC	
C1	Set up boot strap processor Information	
C2	Set up boot strap processor for POST	
C5	Enumerate and set up application processors	
C6	Re-enable cache for boot strap processor	
C7	Early CPU Init Exit	
0A	Initializes the 8042 compatible Key Board Controller.	
0B	Detects the presence of PS/2 mouse.	
0C	Detects the presence of Keyboard in KBC port.	
0E	Testing and initialization of different Input Devices. Also, update the Kernel Variables. Traps the INT09h vector, so that the POST INT09h handler gets control for IRQ1. Uncompress all available language, BIOS logo, and Silent logo modules.	
13	Early POST initialization of chipset registers.	
20	Relocate System Management Interrupt vector for all CPU in the system.	
24	Uncompress and initialize any platform specific BIOS modules. GPNV is initialized at this checkpoint.	
2A	Initializes different devices through DIM. See <i>DIM Code Checkpoints</i> section of document for more information.	
2C	Initializes different devices. Detects and initializes the video adapter installed in the system that have optional ROMs.	
2E	Initializes all the output devices.	

## **POST C**ode Checkpoints cont'd:

Checkpoint	Description		
31	Allocate memory for ADM module and uncompress it. Give control to ADM module for		
	initialization. Initialize language and font modules for ADM. Activate ADM module.		
33	Initializes the silent boot module. Set the window for displaying text information.		
37	Displaying sign-on message, CPU information, setup key message, and any OEM specific		
	information.		
38	Initializes different devices through DIM. See <i>DIM Code Checkpoints</i> section of document for more information. USB controllers are initialized at this point.		
39	Initializes DMAC-1 & DMAC-2.		
3A	Initialize RTC date/time.		
3B	Test for total memory installed in the system. Also, Check for DEL or ESC keys to limit memory test. Display total memory in the system.		
3C	Mid POST initialization of chipset registers.		
40	Detect different devices (Parallel ports, serial ports, and coprocessor in CPU, etc.) successfully installed in the system and update the BDA, EBDAetc.		
52	Updates CMOS memory size from memory found in memory test. Allocates memory for Extended BIOS Data Area from base memory. Programming the memory hole or any kind of implementation that needs an adjustment in system RAM size if needed.		
60	Initializes NUM-LOCK status and programs the KBD typematic rate.		
75	Initialize Int-13 and prepare for IPL detection.		
78	Initializes IPL devices controlled by BIOS and option ROMs.		
7C	Generate and write contents of ESCD in NVRam.		
84	Log errors encountered during POST.		
85	Display errors to the user and gets the user response for error.		
87	Execute BIOS setup if needed / requested. Check boot password if installed.		
8C	Late POST initialization of chipset registers.		
8D	Build ACPI tables (if ACPI is supported)		
8E	Program the peripheral parameters. Enable/Disable NMI as selected		
90	Initialization of system management interrupt by invoking all handlers. <i>Please note this checkpoint comes right after checkpoint 20h</i>		
A1	Clean-up work needed before booting to OS.		
A1 A2	Takes care of runtime image preparation for different BIOS modules. Fill the free area in F000h		
AZ	segment with 0FFh. Initializes the Microsoft IRQ Routing Table. Prepares the runtime language module. Disables the system configuration display if needed.		
A4	Initialize runtime language module. Display boot option popup menu.		
A7	Displays the system configuration screen if enabled. Initialize the CPU's before boot, which		
AI	includes the programming of the MTRR's.		
A9	Wait for user input at config display if needed.		
AA	Uninstall POST INT1Ch vector and INT09h vector.		
AB	Prepare BBS for Int 19 boot. Init MP tables.		
AC	End of POST initialization of chipset registers. De-initializes the ADM module.		
B1	Save system context for ACPI. Prepare CPU for OS boot including final MTRR values.		
00	Passes control to OS Loader (typically INT19h).		

## 9.4 **OEM POST Error Checkpoints**

Checkpoints from the range 61h to 70h are reserved for chipset vendors & system manufacturers. The error associated with this value may be different from one platform to the next.

## 9.5 **DIM Code Checkpoints**

The Device Initialization Manager (DIM) gets control at various times during BIOS POST to initialize different system busses. The following table describes the main checkpoints where the DIM module is accessed:

Checkpoints may differ between different platforms based on system configuration. Checkpoints may change due to vendor requirements, system chipset or option ROMs from add-in PCI devices.

Checkpoint	Description
2A	Initialize different buses and perform the following functions: Reset, Detect, and Disable (function 0); Static Device Initialization (function 1); Boot Output Device Initialization (function 2). Function 0 disables all device nodes, PCI devices, and PnP ISA cards. It also assigns PCI bus numbers. Function 1 initializes all static devices that include manual configured onboard peripherals, memory and I/O decode windows in PCI- PCI bridges, and noncompliant PCI devices. Static resources are also reserved. Function 2 searches for and initializes any PnP, PCI, or AGP video devices.
38	Initialize different buses and perform the following functions: Boot Input Device Initialization (function 3); IPL Device Initialization (function 4); General Device Initialization (function 5). Function 3 searches for and configures PCI input devices and detects if system has standard keyboard controller. Function 4 searches for and configures all PnP and PCI boot devices. Function 5 configures all onboard peripherals that are set to an automatic configuration and configures all remaining PnP and PCI devices.

While control is in the different functions, additional checkpoints are output to port 80h as a word value to identify the routines under execution. The low byte value indicates the main POST Code Checkpoint. The high byte is divided into two nibbles and contains two fields. The details of the high byte of these checkpoints are as follows:

#### HIGH BYTE XY

The upper nibble 'X' indicates the function number that is being executed. 'X' can be from 0 to 7.

- 0 = func#0, disable all devices on the BUS concerned.
- 1 = func#1, static devices initialization on the BUS concerned.
- 2 = func#2, output device initialization on the BUS concerned.
- 3 = func#3, input device initialization on the BUS concerned.
- 4 = func#4, IPL device initialization on the BUS concerned.
- 5 = func#5, general device initialization on the BUS concerned.
- 6 = func#6, error reporting for the BUS concerned.
- 7 = func#7, add-on ROM initialization for all BUSes.
- 8 = func#8, BBS ROM initialization for all BUSes.

The lower nibble 'Y' indicates the BUS on which the different routines are being executed. 'Y' can be from 0 to 5.

- 0 = Generic DIM (Device Initialization Manager).
- 1 = Onboard System devices.
- 2 = ISA devices.
- 3 = EISA devices.
- 4 = ISA PnP devices.
- 5 = PCI devices.

## 9.6 ACPI Runtime Checkpoints

ACPI checkpoints are displayed when an ACPI capable operating system either enters or leaves a sleep state. The following table describes the type of checkpoints that may occur during ACPI sleep or wake events:

Checkpoints may differ between different platforms based on system configuration. Checkpoints may change due to vendor requirements, system chipset or option ROMs from add-in PCI devices.

# 9.7 Boot Block Beep Codes

No. of Beeps	Description
1	Insert diskette in floppy drive A:
2	'AMIBOOT.ROM' file not found in root directory of diskette in A:
3	Base Memory error
4	Flash Programming successful
5	Floppy read error
6	Keyboard controller BAT command failed
7	No Flash EPROM detected
8	Floppy controller failure
9	Boot Block BIOS checksum error
10	Flash Erase error
11	Flash Program error
12	'AMIBOOT.ROM' file size error
13	BIOS ROM image mismatch (file layout does not match image present in flash device)

# 9.8 **POST BIOS Beep Codes**

No. of Beeps	Description
1	Memory refresh timer error.
2	Parity error in base memory (first 64KB block)
3	Base memory read/write test error
4	Motherboard timer not operational
5	Processor error
6	8042 Gate A20 test error (cannot switch to protected mode)
7	General exception error (processor exception interrupt error)
8	Display memory error (system video adapter)
9	AMIBIOS ROM checksum error
10	CMOS shutdown register read/write error
11	Cache memory test failed

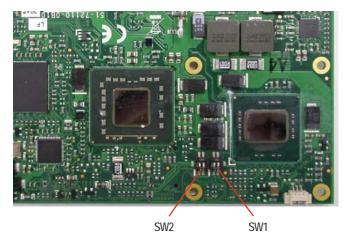

# 9.9 **Troubleshooting POST BIOS Beep Codes**

No. of Beeps	Description	
1, 2 or 3	Reseat the memory, or replace with known good modules.	
4-7, 9-11	<ul> <li>Fatal error indicating a serious problem with the system. Consult your system manufacturer.</li> <li>Before declaring the motherboard beyond all hope, eliminate the possibility of interference by a malfunctioning add-in card. Remove all expansion cards except the video adapter.</li> <li>If beep codes are generated when all other expansion cards are absent, consult your system manufacturer's technical support.</li> <li>If beep codes are not generated when all other expansion cards are absent, one of the add-in cards is causing the malfunction. Insert the cards back into the system one at a time until the problem happens again. This will reveal the malfunctioning card.</li> </ul>	
8	If the system video adapter is an add-in card, replace or reseat the video adapter. If the video adapter is an integrated part of the system board, the board may be faulty.	

# Appendix A: SDVO/DisplayPort/HDMI Switch

Switches SW1 and SW2 are used to set the Concurrent DisplayPort Configuration Strap Controls of the Express-MV. These settings control SDVO, PCI Express Graphics, DisplayPort (DP), and HDMI output.

DP Port-B, HDMI Port-B, PCI Express Graphics (default)\*

	Pin1	Pin2
SW1	OFF	ON
SW2	ON	OFF

## DP Port-C, HDMI Port-C, PCI Express Graphics\*

	Pin1	Pin2
SW1	OFF	ON
SW2	ON	ON

## DP Port-D, HDMI Port-D, PCI Express Graphics\*

	Pin1	Pin2
SW1	ON	ON
SW2	ON	OFF

\*Set JP6 on the Express-BASE Carrier Board to PEG Enabled (short pins 2 & 3).

## SDV0 \*\*

	Pin1	Pin2
SW1	ON	ON
SW2	OFF	OFF

\*\*Set JP6 on the Express-BASE Carrier Board to *PEG Disabled* (short pins 1 & 2). Set Boot Display Device in BIOS to *CRT* + *SDVO* or *SDVO*.

## **Important Safety Instructions**

For user safety, please read and follow all instructions, warnings, cautions, and notes marked in this manual and on the associated equipment before handling/operating the equipment.

- Read these safety instructions carefully.
- ► Keep this user's manual for future reference.
- Read the specifications section of this manual for detailed information on the operating environment of this equipment.
- ▶ When installing/mounting or uninstalling/removing equipment:
  - Turn off power and unplug any power cords/cables.
- ► To avoid electrical shock and/or damage to equipment:
  - Keep equipment away from water or liquid sources;
  - Keep equipment away from high heat or high humidity;
  - Keep equipment properly ventilated (do not block or cover ventilation openings);
  - Make sure to use recommended voltage and power source settings;
  - Always install and operate equipment near an easily accessible electrical socket-outlet;
  - Secure the power cord (do not place any object on/over the power cord);
  - Only install/attach and operate equipment on stable surfaces and/or recommended mountings; and,
  - If the equipment will not be used for long periods of time, turn off and unplug the equipment from its power source.
- Never attempt to fix the equipment. Equipment should only be serviced by qualified personnel.
- A Lithium-type battery may be provided for uninterrupted, backup or emergency power.

Risk of explosion if battery is replaced by an incorrect type. Dispose of used batteries according to the instructions.

- Equipment must be serviced by authorized technicians when:
  - The power cord or plug is damaged;
  - Liquid has penetrated the equipment;
  - It has been exposed to high humidity/moisture;
  - It is not functioning or does not function according to the user's manual;
  - It has been dropped and/or damaged; and/or,
  - It has an obvious sign of breakage.

## **Getting Service**

Contact us should you require any service or assistance.

## ADLINK Technology, Inc.

Address: 9F, No.166 Jian Yi Road, Chungho City, Taipei County 235, Taiwan 台北縣中和市建一路 166 號 9 樓 Tel: +886-2-8226-5877 Fax: +886-2-8226-5717 Email: service@adlinktech.com

### Ampro ADLINK Technology, Inc.

Address: 5215 Hellyer Avenue, #110, San Jose, CA 95138, USA Tel: +1-408-360-0200 Toll Free: +1-800-966-5200 (USA only) Fax: +1-408-360-0222 Email: info@adlinktech.com

## **ADLINK Technology Beijing**

Address: 北京市海淀区上地东路 1 号盈创动力大厦 E 座 801 室(100085) Rm. 801, Power Creative E, No. 1, B/D Shang Di East Rd., Beijing, 100085 China Tel: +86-10-5885-8666

- Fax: +86-10-5885-8625
- Email: market@adlinktech.com

#### ADLINK Technology Shanghai

- Address: 上海市漕河泾高科技开发区钦江路 333 号 39 幢 4 层 (200233) 4F, Bldg 39, Caoheting Science & Technology Park, No.333 Qinjiang Rd., Shanghai, 200233 China
