# 1. INTRODUCTION

**Tracker-007** is a multi-functional tracker. Combining with GPRS and high performance GPS, the device can be used to track and report device's position and status to mobile phone through SMS or Main Data Server (MDS) through HTTP. The operation modes include continuous tracking and position lock (park). SOS buttons can be used to send emergency call. All configurations can be set through SMS or USB interface. The wireless communication includes UDP, TCP/IP, HTTP and SMS. With MTK EPO, it can get shorter TTFF at distressed environment.

## 1.1 Parts names and Functions

## 2. BEFORE YOU GETTING STARTED

### 2.1 Possible Additional Fee

- Position request and position response sent by SMS will be charged.
- Each zoom operation will be charged according to data quantity transferred.

### 2.2 About GPS

- GPS signals are incapable of penetrating solid objects that are non-transparent. The signals will be also affected by surface cover such as tall buildings, tunnels, elevated expressways, forests etc., or weather conditions such as overcast and rain. If the vehicle is poorly insulated against heat and contains metal parts, GPS signals will not be able to penetrate.
- All wireless communication devices such as cell phones, or traffic police speed detectors can interfere with the reception of GPS signals and results in unstable signals.
- To get position fix successfully, please hold the Holux logo up for better signal orientation.
- There is no guaranty that SOS message will be successfully sent at distressed environment where GPS or GSM signals are weak.

### 2.3 About Power

- Though this device is USB compliant and can be bus powered, it is NOT recommended to charge the device though your computer via USB connection. The manufacturer disclaims any liabilities for damage to the handset or personal PC caused by any improper use.
- It takes 5 ~ 120 seconds for the device to be completely powered off. If the device is in the process of acquiring position fix or position report, the power-offing will not be performed until the previous process is complete.
- Tracker-007 cannot be powered on if battery voltage is below 3.5 volts.

### 2.4 About SIM PIN Code & GPRS

**Notice:** SIM PIN should be unlocked before being inserted into the device. SIM PIN can be disabled through ordinary mobile phone.

- SIM card GPRS function enabled is required for normal operation.
- The default PIN code in device is 0000. If SIM lock is enabled and password is incorrect, power on/off device three times will make the SIM card locked permanently. Only PUK code can unlock the SIM in such case. If SIM PIN is enabled, make sure the PIN code is set to device by TrackerConfig. The PIN code

set will be saved in non-volatile memory.

- If the SIM card is not inserted or SIM card is invalid, position fix function will be disabled.
- Google map installed in your cell phone will be downloaded by GPRS automatically when ezSpot is well installed.

## **2.5 Download Documents, Driver and Utility**

All related documents, driver and utility programs can be downloaded from the ezSpot server at <http://ezspot.holux.com/Holux>.

### 3. Installing SIM Card

- Slide the SIM card into SIM socket and lock the SIM socket.

- Restore the bottom cover.

- The final assembly of **Tracker-007**. Secure the case by fastening the screws and inserting cap for water proof.

- Make sure that battery is fully charged before using this device.

### 3. CONFIGURING HOLUX TRACKER

Holux provides a way (TrackerUser.exe) for end users to configure their tracker. Users can easily modify some of the simple settings for their devices, however if users want to modify some settings which are provided by this utility, please contact your distributor for help.

The TrackerUser.exe is the user utility which enables users to fast configure Holux trackers. In this chapter, you will be guided through the process to set the phone numbers to receive tracking report, tracking interval, reporting interval, and editing messages. Periodical tracking mode can be enabled to make device getting position fix and report to server at preset interval.

Tracker007 allows users receive location data by mobile phone, which means users must get a set of Google key to setup the tracker. Please refer to Chapter 3.5 for the steps.

Please note this utility supports only Windows OS. Linux or Mac OS are not supported at this point.

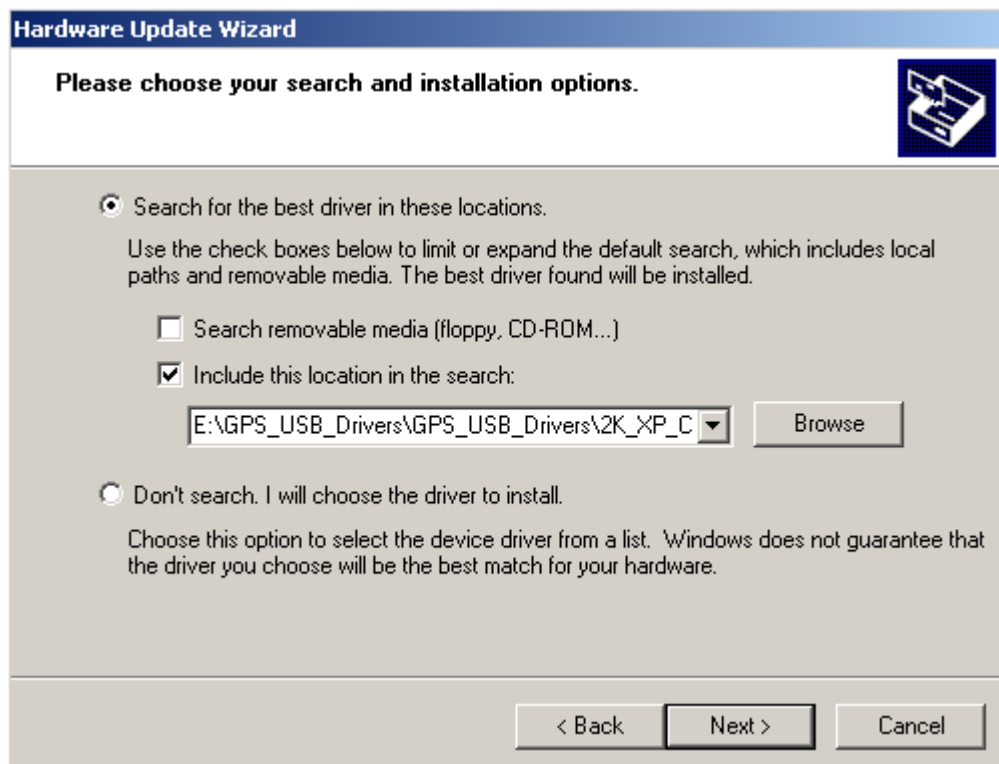

***Note: Make sure the tracker is powered on prior to it is plugged into your computer for configuration. Then use the included USB cable to connect the tracker with your computer to configure the tracker.***

### 3.1 Installing Device Driver for Virtual Comm Port

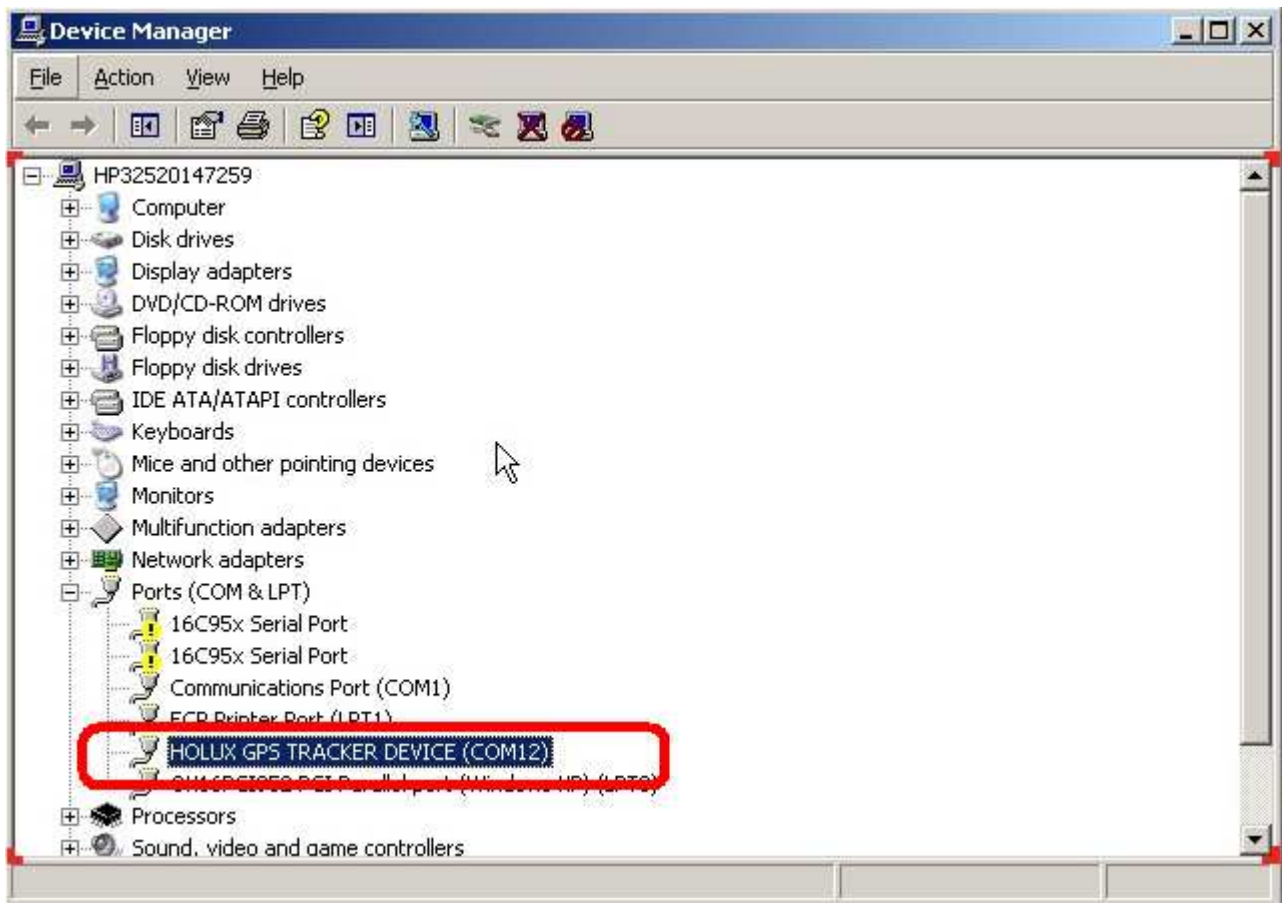

Plug in 5-pin mini-USB cable. When connecting the device first time, OS will request to install the virtual COMM port driver.

Please choose Win2XMcom.inf for Windows XP and Win2XMcom.inf for Windows Vista.

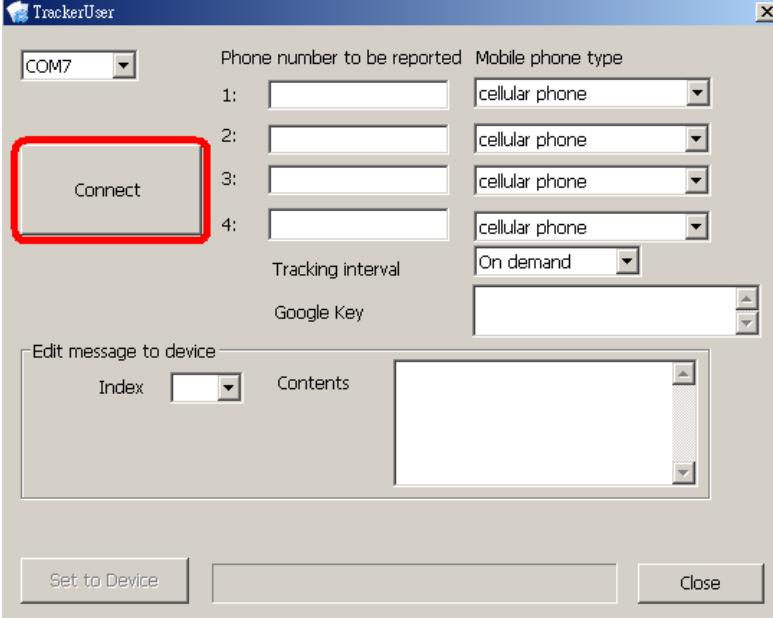

A new MODEM device in device manager will appear after installation. Check Comm port number from Modem page.

## 3.2 Starting Configuration

1. Open the tool CD and run *TrackerUser.exe*
2. The following screen appears.
3. Select “**Connect**”.

The screenshot shows the TrackerUser application window. The title bar reads "TrackerUser". The interface includes a dropdown menu for "COM7" on the left. To its right, under the heading "Phone number to be reported", are four numbered input fields (1:, 2:, 3:, 4:). Further right, under "Mobile phone type", are four corresponding dropdown menus, each currently set to "cellular phone". Below these is a "Tracking interval" dropdown set to "On demand" and a "Google Key" text field. At the bottom left, there is an "Edit message to device" section with an "Index" dropdown and a "Contents" text area. At the very bottom, there are three buttons: "Set to Device", a disabled button, and "Close". The "Connect" button, located to the left of the phone number input fields, is highlighted with a red rectangular border.

### 3.3 Setting Mobile Phone Numbers

- Enter the mobile phone numbers for the tracker to report its position to via short messages. Users can configure four sets (number 1 to 4) of caller mobile phone numbers. Only do the numbers set in the list receive returning message. If the phone number is left blank, the tracker will not return any message to any caller.
- Users need to specify the phone type in terms of OS for the mobile phone. Click the down arrow ▼ in the setting to select. “Windows Mobile” means Windows-like phone (i.e. PDA); “Cellular Phone” means non-Windows GSM/GPRS phone.

The screenshot shows the 'TrackerUser' application window. It features a 'Phone number to be reported' section with four numbered input fields. The first two fields contain the numbers '0921737960' and '0921739999', while the last two are empty. To the right of these fields is a 'Mobile phone type' column with dropdown menus, all currently set to 'cellular phone'. Above these fields is a 'COM7' dropdown and a 'Disconnect' button. Below the phone numbers are 'Tracking interval' (set to 'On demand') and 'Google Key' (an empty field). At the bottom, there is an 'Edit message to device' section with an 'Index' dropdown set to '1' and a 'Contents' text area. A 'Set to Device' button is located at the bottom left, and a 'Close' button is at the bottom right.

Once the configuration is completed, you can click “**Set to Device**” to save the configuration to your tracker or you can proceed to next section to set the tracking/reporting interval and edit messages.

### 3.4 Setting Tracking Intervals

- User can set the tracking interval to determine the time interval for the tracker to receive GPS signal. The default tracking interval is “on demand”, which means the tracker will refresh its position only when users turn on GPS to request positioning.
- There are 3min 、10min 、30min 、1 hour 、6 hour 、12 hour and 24 hour for selection to set the tracking interval.

The screenshot shows the 'TrackerUser' application window. It features a 'Phone number to be reported' section with four rows, each containing a phone number and a 'Mobile phone type' dropdown menu. The first two rows are populated with '0921737960' and '0921739999', both set to 'cellular phone'. Below this is a 'Tracking interval' dropdown menu, which is currently open, showing options: 'On demand', '3 Min', '10 Min', '30 Min', '60 Min', '6 Hours', '12 Hours', and '24 Hours'. The 'On demand' option is selected. To the left of the dropdown is a 'Google Key' input field. Below the phone numbers is a 'Disconnect' button. At the bottom, there is an 'Edit message to device' section with an 'Index' dropdown set to '1' and a 'Contents' text area. A 'Set to Device' button is located to the left of the 'Contents' area, and a 'Close' button is to the right.

### 3.5 Setting Google key

User must set Google key to device for granting map from Google map service. This key may not be free according to Google's rule. Holux does not guarantee the users can use this tool without valid Google key and Holux does not intend to provide such key.

- ☐ First you must have an URL; you can use your blog URL or others URL.
- ☐ You must have Google account, if you do not have any account, you can go to <https://www.google.com/accounts/>.
- ☐ Go to <http://code.google.com/apis/maps/> and click "Google Maps API Sign Up". Then key in your URL and click "Generate API Key" to get key.
- ☐ Copy the key and paste to TrackerUser.

The screenshot shows the TrackerUser application window. It features a 'Phone number to be reported' section with four rows, each containing a number input field and a 'Mobile phone type' dropdown menu. The first two rows are pre-filled with '0921737960' and '0921739999', both set to 'cellular phone'. Below this is a 'Tracking interval' dropdown set to 'On demand' and a 'Google Key' text input field. On the left, there is a 'Disconnect' button. At the bottom, there is an 'Edit message to device' section with an 'Index' dropdown set to '1' and a 'Contents' text area. At the very bottom, there are 'Set to Device' and 'Close' buttons.

Once the configuration is completed, you can click "**Set to Device**" to save the configuration to your tracker. Or you can proceed to next section to edit messages.

## 3.6 Editing Messages

Users can edit 10 outgoing messages and save them in the tracker. Outgoing messages can be sent to the mobile phone preset in the tracker. Outgoing messages will be listed according to their corresponding index numbers at left column.

The screenshot shows the TrackerUser application window. At the top left is a dropdown menu for 'COM7'. To its right are labels for 'Phone number to be reported' and 'Mobile phone type'. Below these are four rows of input fields for phone numbers (labeled 1: through 4:) and corresponding dropdown menus for mobile phone types (all set to 'cellular phone'). A 'Disconnect' button is located to the left of these fields. Below the phone number fields are 'Tracking interval' (set to 'On demand') and 'Google Key' (an empty text field). At the bottom is an 'Edit message to device' section with an 'Index' dropdown (set to '1') and a 'Contents' text area containing the text 'Call me back'. At the very bottom are a 'Set to Device' button, an empty text field, and a 'Close' button.

Index	Phone number to be reported	Mobile phone type
1:	0921737960	cellular phone
2:	0921739999	cellular phone
3:		cellular phone
4:		cellular phone

Tracking interval: On demand  
Google Key:

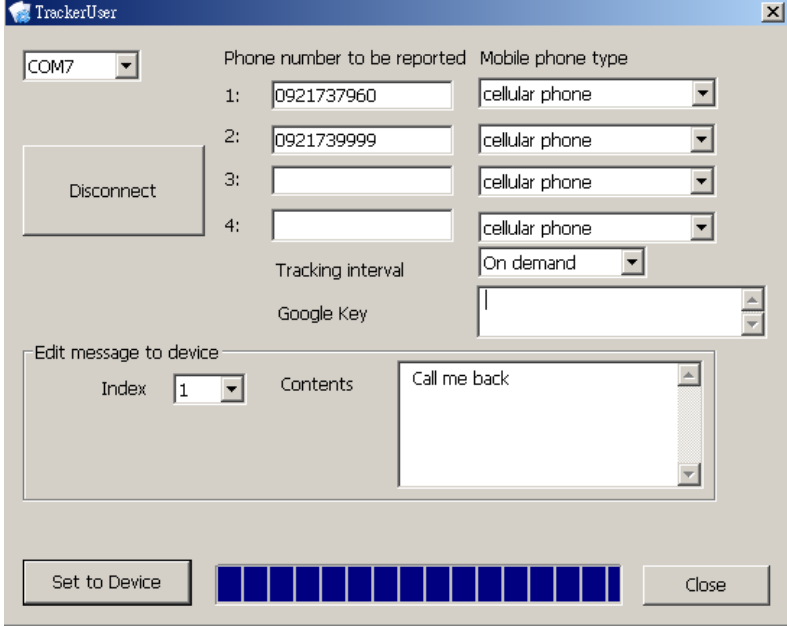

Edit message to device  
Index: 1  
Contents: Call me back

Buttons: Disconnect, Set to Device, Close

### 3.7 Save and Exit

Once the configuration is completed, click “**Set to Device**” to save the configuration to your tracker.

Click “**Close**” to exit this dialogue.

The image shows a Windows-style dialog box titled "TrackerUser". It contains several configuration fields and buttons. At the top left is a dropdown menu showing "COM7". To its right are two columns of settings: "Phone number to be reported" and "Mobile phone type". Under "Phone number to be reported", there are four numbered entries (1: to 4:), each with a text input field. Entry 1 contains "0921737960", entry 2 contains "0921739999", and entries 3 and 4 are empty. Under "Mobile phone type", there are four dropdown menus, all currently set to "cellular phone". Below these is a "Tracking interval" dropdown set to "On demand" and a "Google Key" text input field. On the left side of the dialog is a "Disconnect" button. At the bottom left is a "Set to Device" button. At the bottom right is a "Close" button. In the center bottom is a progress bar consisting of 15 blue rectangular segments. Above the "Set to Device" button is a section titled "Edit message to device" which includes an "Index" dropdown set to "1" and a "Contents" text area containing the text "Call me back".

## **4. BASIC OPERATION**

### **4.1 Turn on Tracker**

Press the power key for more than 2 seconds to turn on the device. Green LED will flash every 4 seconds during the process. The device will try to attach during power on stage. It will take about 60 seconds to complete.

### **4.2 Turn off Tracker**

Press the power key for 2 seconds to turn off the device.

### **4.3 Position Lock (Park)**

- Pressing park key for more than 2 seconds will activate the park mode. Green LED will blink every 2 seconds in park mode.
- Blue LED blinks every 2 seconds when device is getting a position fix.
- G-sensor is activated in 3 minutes after pressing park key.
- Tracker will wakeup to get a GPS fixed and send alarm when detect G-force.
- Tracker will use the first successful position fix as park center.
- Pressing park key again will release the park mode and Tracker will be back to the previous operation mode.
- Pressing two keys simultaneously in park mode will change device into SOS mode. Park mode will be stopped.

### **4.4 Emergency Report (SOS)**

- Pressing two keys simultaneously for more than 2 seconds will activate SOS mode. Device will try to get a fix immediately and send SOS signal through SMS or HTTP.
- Red LED will flash six times within 3 seconds. Then all LED's will be OFF.
- Pressing two keys simultaneously again, device will send SOS event again. (Repeat step 1~2)
- If position fix fails, device will send the latest valid position.
- Device will send SOS SMS three times per 5 minutes then SOS mode will be unlocked.
- Power off function is non-functional during SOS mode. SOS function can be disabled by server unlock command or by pressing park key 3 times in 5 seconds. Device will be back to the previous operation mode after SOS mode being unlocked.
- SOS mode has the highest priority comparing with other functions (Periodic Tracking and Park Mode).

## 4.5 LED Indication

Item	LED	LED icon /color	Status	Indication
1	Power	 Amber	Blinks every 4 seconds	Battery is low
2	Power	 Amber	Glows steadily	Battery is recharging
3	Power	 Green	Glows steadily	Battery is full
4	Power	 Green	Blinks every 4 seconds	Device is functioning normally
5	Power	 Green	Blink every 0.5 second	Device is powering off when battery is normal
6	Power	 Amber	Blink every 0.5 second	Device is powering off when battery is low
7	GPRS	 Green	Blink 2 times rapidly every 2 seconds	GSM function fails or SIM card is invalid when power is normal.
8	GPRS	 Amber	Blink 2 times rapidly every 2 seconds	GSM function fails or SIM card is invalid when power is low.
9	GPS	 Blue	Blinks every 2 seconds	Acquisition in process
10	GPS	 Blue	Blinks every 4 seconds	Acquisition fails in the last try
11	GPS	 Blue	Turns off	Acquisition succeed and position is fixed in the last try
12	Status	 Amber	Blinks 6 times in 3 seconds. All LED turn off.	SOS mode is activated
13	Status	 Green	Blinks every 2 seconds	Park mode is activated
14	Status	 Amber	Blinks every 2 seconds	Park mode and battery is low

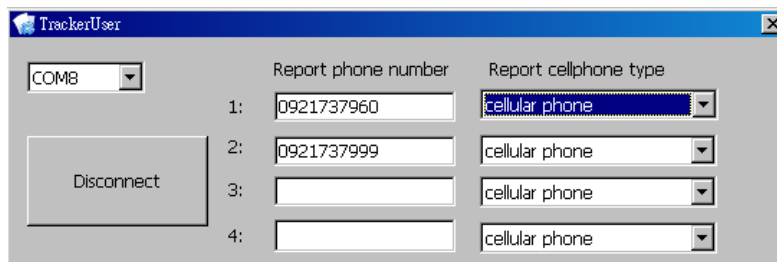

## 4.6 How to Track

The Holux tracker can send its position (latitude and longitude data) to the mobile phones preset in the tracker via SMS (Short Message Service). Mobile phones requesting position get messages and read them to know the position of the device.

### 4.6.1 Requirements

Before you start tracking, make sure:

1. Mobile phone numbers to receive tracking report have been **pre-set** into the tracker through the user utility TrackerUser. Please refer to the previous section titled “Configuring Holux Tracker” for details;

2. the mobile phone numbers to receive tracking report is **internet connected**; you will not be able to download Google map for tracking if your mobile phone has no internet connection;

### 4.6.2 Viewing Map on Mobile Phone

The position sent by SMS format to mobile phones preset for tracking the device can be read either in text or map format. The mobile phones requesting position of the tracker will automatically download Google map if it is internet connected. Users can view Google map to know the tracker’s position directly.

If users choose to use the internet connection to view the tracker’s position, they simply open the tracker’s message and connect the web link within. Google map will be downloaded automatically.

Those mobile phone numbers preset in the tracker to request the tracker’s position can either acquire position on a regular time interval or by on-demand requests.

## Tracking by On-Demand Requests

If the tracking interval is set to “**On demand**”, it means the tracker’s position can be acquired by active request from the pre-set mobile phones. The link with the position will be reported. If you do not have any Google Map Key, please contact your dealer.

## Tracking at Regular Time Interval

If the tracking interval was set to acquire the tracker’s position on a regular time interval in advanced, it means the tracker’s position will be automatically and periodically sent to those pre-set mobile phones in SMS way. The mobile phones requesting position need to open the messages received from the tracker to know the tracker’s position. Google map will automatically open and the tracker’s position will be displayed if the Internet connection is good.

### 4.7 Start Tracking – Request Position

1. Tracker will start position fix if calling phone number has been pre-set in the configuration.
2. Tracker will report the current position if position fix succeeds.
3. Tracker will report the latest position if position fix fails.

# Appendix A. Specifications

## Physical Characteristics

5-pin Mini-USB connector with USB virtual COM port

Dimensions: 76 x 42.5 x 20 mm

Weight: 69 g

Keys: power and park key

Operation temperature: -10 °C ~ 55 °C

Storage temperature: -20 °C ~ 70 °C

Operating humidity 5 ~ 90 %

Waterproof: IPX6

## System

Renesas 32-bit RISC CPU

Memory: 8 Mbytes NOR and 4 Mbytes SRAM

Location log: 24,000 records.

Build in G-sensor

## GPRS Protocol

GPRS multi-slot class 8 (optional)

GPRS multi-slot class 10 (default)

GPRS mobile station class B

## GSM Antenna

Dual band antenna: 900MHz & 1800MHz or 850MHz & 1900MHz

## Certification

FCC

CE

NCC

## GSM module

SIMCOM SIM340DZ GSM module

SIM socket: 1.8, 3.0 V

## GPS

Chipset: MTK MT3329

15 x 15 x 4 mm patch antenna

## Power Consumption

Battery: Li-Ion Battery, 800 mAh

Standby time 110 hours.

Park mode with position fix at 5 minutes interval: 50 hours; Periodic tracking with position fix at 15 minutes interval: 70 hours.

## FCC Regulations

- This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.
- This device has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiated radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:
  - Reorient or relocate the receiving antenna.
  - Increase the separation between the equipment and receiver.
  - Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
  - Consult the dealer or an experienced radio/TV technician for help.

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

- This device complies with FCC radiation exposure limits set forth for an uncontrolled environment. In order to avoid the possibility of exceeding the FCC radio frequency exposure limits, human proximity to the antenna shall not be less than 20 cm (8 inches) during normal operation. This device is a multi-functional tracker by putting on the moving object. For RF exposure safety, the user is not allowed to put this device in the pocket.

## Declaration of Conformity

The following products is herewith confirmed to comply with the requirements set out in the Council Directive on the Approximation of the laws of the Member States relating to R&TTE Directive (1999/5/EC) that include the Electromagnetic Compatibility Directive (89/336/EEC) and Low Voltage Directive (73/23/EEC). The listed standard as below were applied:

The following Equipment:

Product : Tracker007  
Trade name : **HOLUX**  
Model Number : GR515

This product is herewith confirmed to comply with the requirements set out in the Council Directive on the Approximation of the laws of the Member States relating to R&TTE Directive (1999/5/EC) that include the Electromagnetic Compatibility Directive (89/336/EEC) and Low Voltage Directive (73/23/EEC), the following standards were applied:
