Safety Precaution (Read these precautions before use.)

This manual classifies the safety precautions into two categories:

↑ WARNING and **↑** CAUTION

Indicates that incorrect handling may cause hazardous conditions resulting in death or severe injury

Indicates that incorrect handling may cause hazardous conditions, resulting in medium or slight personal injuror physical damage

Depending on the circumstances, procedures indicated by ACAUTION may also cause severe injury

It is important to follow all precautions for personal safety.

How to obtain manuals

For product manuals or documents, consult with the Mitsubishi Electric dealer from who you purchased your product.

Applicable standards

EX31-3A-ADP units made in June 2009 or later comply with the EC Directive (EMC Directive) and UL standards (UL, cUL). Further information can be found in the following manual.

- → FX3S Series Hardware Manual (Manual No. JY997D48301) → FX3G Series Hardware Manual (Manual No. JY997D46001) → FX3GC Series Hardware Manual (Manual No. JY997D45201)
- → FX3U Series Hardware Manual (Manual No. JY997D18801) → FX3UC (D. DS. DSS) Series Hardware Manual (Manual No. JY997D28601) → FX3UC-32MT-LT-2 Hardware Manual (Manual No. JY997D31601)

Regarding the standards that relate to the main unit, please refer to either the FX series product catalog or consult with your nearest Mitsubishi product provider.

This product is designed for use in industrial applications.

Note

- Manufactured by: Mitsubishi Electric Corporation
 - 2-7-3 Marunouchi Chivoda-ku Tokyo 100-8310 Japan
- Manufactured at: Mitsubishi Electric Corporation Himeii Works 840 Chiyoda-machi, Himeji, Hyogo, 670-8677 Japan
- · Authorized Representative in the European Community: Mitsubishi Electric Europe B V Gothaer Str. 8, 40880 Ratingen, Germany

Caution for compliance with EC Directive

The analog special adapters have been found to be compliant to the European standards in the aforesaid manual and directive. However, for the very best performance from what are in fact delicate measuring and controlled output device Mitsubishi Electric would like to make the following points:

As analog devices are sensitive by nature, their use should be considered carefully. For users of proprietary cables (integral with sensors or actuators). these users should follow those manufacturers installation requirements.

Mitsubishi Electric recommend that shielded cables should be used. If NO other EMC protection is provided, then users may experience temporary loss or accuracy between +10 % in very heavy industrial areas.

However, Mitsubishi Electric suggest that if adequate EMC precautions are followed for the users complete control system, users should expect accuracy as specified in this manual

- Sensitive analog cable should not be laid in the same trunking or cable conduit as high voltage cabling. Where possible users should run analog cables senarately
- Good cable shielding should be used. When terminating the shield at Earth - ensure that no earth loops are accidentally created.
- · When reading analog values, EMC accuracy can be improved out by averaging the readings. This can be achieved either through functions on the analog special adapters or through a users program.

1. Outline

The FX3U-3A-ADP special adapter for analog input and output (hereinafter called 3A-ADP) is a special adapter that adds to add two analog input points and one analog output point

1.1 Incorporated Items

Verify that the following product and items are included in the package:

Product	FX3U-3A-ADP analog input and output special adapter
Accessories	User's Manual (This manual)

1.2 External Dimensions, Part Names, and Terminal Layout

- [1] DIN rail mounting groove (DIN rail: DIN46277)
- [2] Name plate
- [3] Special adapter slide lock:
- Used to connect additional special adapters onto the left side of this special
- [4] Special adapter connector cover:
- Remove this cover to connect additional special adapters to the left side. [5] Direct mounting hole: 2 holes of 64.5 (0.18") (mounting screw: M4 screw)
- Not used when connecting to EX3CC/EX3UC Series PLC
- POWER LED (green):
- Lit while 24 V DC power is supplied properly to terminals '24+' and '24-'. [7] Terminal block (European type):
- Connect the analog voltage/current signal, and 24 V DC power supply.
- Special adapter connector:
- Used to connect this special adapter to PLC main unit or special adapter.
- [9] DIN rail mounting hook
- [10] Special adapter fixing hook
- [11] Special adapter connector

Used to connect communication or analog special adapters to the left side of the 3AD-ADP

2. Installation

For installation/uninstallation details, refer to the respective PLC User's manual Hardware Edition.

INSTALLATION PRECAUTIONS

↑ WARNING

Make sure to cut off all phases of the power supply externally before attempting installation or wiring work.

Failure to do so may cause electric shock or damage to the product

INSTALLATION PRECAUTIONS

↑CAUTION

- Use the product within the generic environment specifications described in PLC main unit manual (Hardware Edition).
- Never use the product in areas with excessive dust, oily smoke, conductive dusts corrosive gas (salt air, Cl2, H2S, SO2, or NO2), flammable gas, vibration or impacts, or expose it to high temperature, condensation, or rain and wind. If the product is used in such conditions, electric shock, fire, malfunctions deterioration or damage may occur.
- When drilling screw holes or wiring, make sure cutting or wire debris does not enter the ventilation slits.
- Failure to do so may cause fire, equipment failures or malfunctions.
- Do not touch the conductive parts of the product directly. Doing so may cause device failures or malfunctions.
- Connect special adapter securely to their designated connectors. Loose connections may cause malfunctions.

2.1 Connection to the PLC

This section describes the connection method to the PLC (FX3U Series PLC is used for the following example)

For installation method to other PLCs, refer to the respective PLC User's manual

Procedure

- 1) Turn off the nower
- Disconnect all the cables connected to the PLC main unit and special adapter. and demount the main unit and special adapter mounted on DIN rail or mounted directly using screws.
- Install an expansion board to the main unit.

For the expansion board installation procedure, refer to the following manual: → FX3u Series User's Manual - Hardware Edition

the right 6) Slide back the special adapter slide lock (fig.B) of the main unit to fix the special adapter (fig.C).

Connection precautions

Connect all the high-speed I/O special adapters before connecting other special adapters when they are used in combination. Do not connect a high-speed I/O special adapter on the left side of any

special adapters other than other high-speed I/O special adapters.

3. Wiring

PRECAUTIONS

M WARNING

Make sure to cut off all phases of the power supply externally before attempting installation or wiring work Failure to do so may cause electric shock or damage to the product

WIRING DDECALITIONS

↑ CAUTION

- When drilling screw holes or wiring, make sure cutting or wire debris does not enter the ventilation slits
- Failure to do so may cause fire, equipment failures or malfunctions.
- Make sure to observe the following precautions in order to prevent any damage to the machinery or accidents due to abnormal data written to the PLC under the influence of noise:
- 1) Do not bundle the power line or shield of the analog input/output cable together with or lay it close to the main circuit, high-voltage line, or load
- Otherwise, noise disturbance and/or surge induction are likely to take place. As a guideline, lay the control line at least 100mm (3.94") or more away from the main circuit, high-voltage line, or load line
- 2) Ground the shield of the analog input/output cable at one point on the signal receiving side. However, do not use common grounding with heavy
- Make sure to properly wire to the terminal block (European type) in accordance with the following precautions. Failure to do so may cause electric shock, equipment failures, a short-circuit
- wire breakage, malfunctions, or damage to the product.
- The disposal size of the cable and should follow the dimensions described in the manual
- Tightening torque should follow the specifications in the manual.
- Twist the end of strand wire and make sure that there are no loose wires.
- Do not solder-plate the electric wire ends Do not connect more than the specified number of wires or electric wires
- of unenecified size Affix the electric wires so that neither the terminal block nor the connected parts are directly stressed
- Make sure to properly wire the terminal block in accordance with the following precautions.
- Failure to do so may cause electric shock, equipment failures, a short-circuit wire breakage malfunctions or damage to the product
- The disposal size of the cable end should follow the dimensions described in the manual of the PLC main unit.
- Tightening torque should follow the specifications in the manual of the PLC main unit

3.1 Applicable Cable and Terminal Tightening Torque

3.1.1 Terminal block (European type)

1) Wire size

Wiring to analog device should use 22-20 AWG wire.

2) Applicable cable

Туре	Wire size
Single-wire	0.3 mm ² to 0.5 mm ² (AWG22 to 20)
2-wire	2 pieces of 0.3 mm ² (AWG22)

3) Termination of cable end

Strip the coating of strand wire and twist the cable core before connecting it. or strip the coating of single wire before connecting it.

An alternative connection is to use a ferrule with insulating sleeve. <Reference>

Manufacturer Model Caulking tool CRIMPFOX 6* Phoenix Contact Co., Ltd. AI 0 5-8WH (or CRIMPFOX 6T-F^{*2})

- *1 Old model name: CRIMPFOX ZA 3
- *2 Old model name: CRIMPFOX UD 6

When using a stick terminal with insulating sleeve, choose a wire with proper cable sheath referring to the above outside dimensions, or otherwise, the wire cannot be inserted easily

The tightening torque must be 0.22 to 0.25 N·m. Do not tighten terminal screws exceeding the specified torque. Failure to do so may cause equipment failures or malfunctions

3.2 Power Supply Wiring

For the power supply wiring, refer to the following manual.

→ FX3S/FX3G/FX3G/FX3U/FX3UC Series User's Manual - Analog Control Edition

3.3 Wiring of Analog Input

For the terminal configuration, refer to Section 1.2

V□+, I□+, ch□:□represents the channel number

- *1 Use 2-core shielded twisted pair cable for the analog input lines, and separate the analog input lines from other power lines or inductive lines
- *2 Make sure to short-circuit the 'V\(\sigma\)+' and 'I\(\sigma\)+' terminals when current is input (: input channel number)
- *3 24 V DC service power supply of the FX3S/FX3G/FX3U Series PLC can also be

3.4 Wiring of Analog Output

→ For the terminal configuration, refer to Section 1.2

*2 Grounding *1 Use 2-core shielded twisted pair cable for the analog output lines, and separate the analog output lines from other power lines or inductive lines.

*2 Ground the shielded wire at one point on the signal receiving side

3.5 Grounding

Grounding should be performed as stated below.

- The grounding resistance should be 100 O or less.
- · Independent grounding should be performed for best results When independent grounding is not performed, perform "shared grounding" of the following figure.

For details, refer to the respective PLC User's manual Hardware Edition.

- The grounding wire size should be AWG 22-20 (0.3-0.5 mm²).
- The grounding point should be close to the PLC, and all grounding wire should be

4. Specifications

STADTIID AND MAINTENANCE DDECAUTIONS

↑ CAUTION

- Do not disassemble or modify the PLC Doing so may cause fire, equipment failures, or malfunctions. * For repair, contact your local Mitsubishi Electric representative.
- Do not drop the product or exert strong impact to it Doing so may cause damage

DISPOSAL PRECAUTIONS

↑ CAUTION

Please contact a certified electronic waste disposal company for environmentally safe recycling and disposal of your device

TRANSPORTATION AND STORAGE PRECAUTIONS

↑CAUTION

The product is a precision instrument. During transportation, avoid any impacts. Failure to do so may cause failures in the product. After transportation, verify the operations of the product

4.1 Applicable PLC

Model name	Applicability
FX3S Series PLC	Ver. 1.00 or later (from first production)
FX3G Series PLC	Ver. 1.20 or later
FX3GC Series PLC	Ver. 1.40 or later (from first production)
FX3U Series PLC	Ver. 2.61 or later
FX3UC Series PLC	Ver. 2.61 or later

The version number can be checked by monitoring D8001/D8101 as the last three digits indicate it.

4.2 General Specifications

Items other than the following are equivalent to the those of the PLC main unit. For general specifications, refer to the respective PLC User's manual Hardware

Item	Specificati	on
Dielectric withstand voltage	500 V AC for one minute	Between all terminals and ground terminal of PLC
Insulation resistance	IS MO or more by 500 V DC	main unit

4.3 Power Supply Specifications

Item	Specification	
Conversion circuit driving power 24 V DC +20 % / -15 %, 90 mA Connect a 24 V DC power supply to the terminal block.		
Interface driving power	5 V DC, 20 mA 5 V DC power is supplied from the internal power supply of main unit.	

4.4 Performance Specifications

Performance Specifications of Analog Input

Item	Specification	
item	Voltage input	Current input
Analog input range	0 to 10 V DC (Input resistance: 198.7 kΩ)	4 to 20 mA DC (Input resistance: 250 Ω)
Maximum absolute input	-0.5 V, +15 V	-2 mA, +30 mA
Resolution	2.5 mV (10 V/4000)	5 μA (16 mA/3200)
Total accuracy	±0.5 % (±50 mV) for full scale of 10 V (when ambient temperature is 25 °C±5 °C) ±1.0 % (±100 mV) for full scale of 10 V (when ambient temperature is 0 °C to 55 °C)	• ±0.5 % (±80 μA) for full scale of 16 mA (when ambient temperature is 25 °C±5 °C) • ±1.0 % (±160 μA) for full scale of 16 mA (when ambient temperature is 0 °C to 55 °C)

INSTALLATION

For installation/uninstallation details, refer to the respective PLC User's manua Hardware Edition.

∴ WARNING Make sure to cut off all phases of the power supply externally before attempting Failure to do so may cause electric shock or damage to the pro-

INSTALLATION PRECAUTIONS **∴**CAUTION

Use the product within the generic environment specifications described in PL0 main unit manual (Hardware Edition).

- Never use the product in areas with excessive dust, oily smoke, conductive dusts corrosive gas (salt air, Cl2, H2S, SO2, or NO2), flammable gas, vibration of impacts, or expose it to high temperature, condensation, or rain and wind. If the product is used in such conditions, electric shock, fire, malfunction deterioration or damage may occur.
- When drilling screw holes or wiring, make sure cutting or wire debris does not enter the ventilation slits.

 Failure to do so may cause fire, equipment failures or malfunctions.
- Do not touch the conductive parts of the product directly.
- Doing so may cause device failures or malfunctions Connect special adapter securely to their designated connectors.

2.1 Connection to the PLC

This section describes the connection method to the PLC (FX3U Series PLC is

used for the following example).

For installation method to other PLCs, refer to the respective PLC User's manual Hardware Edition.

Procedure 1) Turn off the power

and demount the main unit and special adapter mounted on DIN rail or

Disconnect all the cables connected to the PLC main unit and special adapter

and demount the main unit and special adapter in mounted directly using screws.

2) Install an expansion board to the main unit.

For the expansion board installation procedure, refer the expansion board installation procedure, refer the process of the special adapter connector cover on the expansion board (fig.A).

When connecting this product to another special adapter, please replace the expansion board in the above description with a 'special adapter' and perform the procedure as indicated. perform the procedure as indicated 4) Slide the special adapter slide lock

(fig.B) of the main unit.
When connecting this product to another special adapter, please replace the 'main unit' in the above description with a 'special adapter' and perform the procedure as indicated. (Please replace

procedure as indicated. (Please re the following procedures similarly.) 5) Connect the special adapter (fig.C) to the main unit as shown on the right.
6) Slide back the special adapte slide lock (fig.B) of the main unit to

fix the special

adapter (fig.C)

Connection precautions

Connect all the high-speed I/O special adapters before connect special adapters when they are used in combination.

Do not connect a high-speed I/O special adapter on the left side of any.

special adapters other than other high-speed I/O special adapters.

3. Wiring

∴WARNING RECAUTIONS

Make sure to cut off all phases of the power supply externally attempting installation or wiring work. Failure to do so may cause electric shock or damage to the pr

VIRING PRECAUTIONS **⚠CAUTION**

- When drilling screw holes or wiring, make sure cutting or wire debris do not enter the ventilation slits
- Failure to do so may cause fire, equipment failures or malfunctions.
- Make sure to observe the following precautions in order to prevent ar damage to the machinery or accidents due to abnormal data written to the PLC under the influence of noise: 1) Do not bundle the power line or shield of the analog input/output cable together with or lay it close to the main circuit, high-voltage line, or load
- Otherwise, noise disturbance and/or surge induction are likely to take
- place. As a guideline, lay the control line at least 100mm (3.94") or more away from the main circuit, high-voltage line, or load line.

 2) Ground the shield of the analog input/output cable at one point on the signal receiving side. However, do not use common grounding with heavy
- Make sure to properly wire to the terminal block (European type) is accordance with the following precautions. Failure to do so may cause electric shock, equipment failures, a short-circui wire breakage, malfunctions, or damage to the product.

 The disposal size of the cable end should follow the dimensions described in the meaning.
- described in the manual.
- Tightening torque should follow the specifications in the manual. Twist the end of strand wire and make sure that there are no loose wires
- Do not solder-plate the electric wire ends. Do not connect more than the specified number of wires or electric wires of unspecified size.
- Affix the electric wires so that neither the terminal block nor the connecte
- parts are directly stressed.
- Make sure to properly wire the terminal block in accordance with th following precautions. Failure to do so may cause electric shock, equipment failures, a short-circui wire breakage, malfunctions, or damage to the product.
- The disposal size of the cable end should follow the dimensions described in the manual of the PLC main unit.
- Tightening torque should follow the specifications in the manual of the PLC main unit.

3.1 Applicable Cable and Terminal Tightening Torque Terminal block (European type)

1) Wire size Wiring to analog device should use 22-20 AWG wire.

2) Applicable cable Type Single-wire 0.3 mm² to 0.5 mm² (AWG22 to 20) 2 pieces of 0.3 mm² (AWG22)

2-wire 3) Termination of cable end

Strip the coating of strand wire and twist the cable core before connecting it, or strip the coating of single wire before connecting it.

An alternative connection is to use a ferrule with insulating sleeve

Manufacturer	Model	Caulking tool
Phoenix Contact Co., Ltd.	AI 0.5-8WH	CRIMPFOX 6*1 (or CRIMPFOX 6T-F*2)

*1 Old model name: CRIMPFOX ZA 3 *2 Old model name: CRIMPFOX IID 6

- Strand wire/single wire

cable sheath referring to the above outside dimensions, or otherwise, the wire cannot be inserted easily.

The tightening torque must be 0.22 to 0.25 N·m. Do not tighten termina screws exceeding the specified torque. Failure to do so may cause equipmen failures or malfunctions.

3.2 Power Supply Wiring

For the power supply wiring, refer to the following manual.

→ FX3S/FX3G/FX3GC/FX3U/FX3UC Series User's Manual - Analog Control Edition

3.3 Wiring of Analog Input For the terminal configuration, refer to Section 1.2

V□+, I□+, ch□: □represents the channel number

- *1 Use 2-core shielded twisted pair cable for the analog input lines, and separate the analog input lines from other power lines or inductive lines.
- *2 Make sure to short-circuit the 'V□+' and 'I□+' terminals when current is input. (□: input channel number)
- *3 24 V DC service power supply of the FX3S/FX3G/FX3U Series PLC can also be

3.4 Wiring of Analog Output

- *1 Use 2-core shielded twisted pair cable for the analog output lines, and separate the analog output lines from other power lines or inductive lines
- *2 Ground the shielded wire at one point on the signal receiving side

3.5 Grounding

Grounding should be performed as stated below. • The grounding resistance should be 100 Ω or less

- Independent grounding should be performed for best results.

 When independent grounding is not performed, perform "shared grounding" of the following figure For details, refer to the respective PLC User's manual Hardware Edition

- The grounding wire size should be AWG 22-20 (0.3-0.5 mm²)
- The grounding point should be close to the PLC, and all grounding wire should be as short as possible

Specifications

DISPOSAL

STARTUP AND MAINTENANCE PRECAUTIONS **⚠CAUTION**

Do not disassemble or modify the PLC.

Doing so may cause fire, equipment failures, or malfunctions.

* For repair, contact your local Mitsubishi Electric representative. Do not drop the product or exert strong impact to it. Doing so may cause damage.

∴CAUTION RECAUTIONS Please contact a certified electronic waste disposal company for the environmentally safe recycling and disposal of your device.

⚠CAUTION The product is a precision instrument. During transportation, avoid any impacts. Failure to do so may cause failures in the product. After transportation, verify the operations of the product

Annlicable PLC

Applicable i 20		
Model name	Applicability	
FX3S Series PLC	Ver. 1.00 or later (from first production)	
FX3G Series PLC	Ver. 1.20 or later	
FX3GC Series PLC	Ver. 1.40 or later (from first production)	
FX3U Series PLC	Ver. 2.61 or later	
EYSUC Series DLC	Ver 2.61 or later	

The version number can be checked by monitoring D8001/D8101 as the last three digits indicate it.

4.2 General Specifications

Items other than the following are equivalent to the those of the PLC main unit. For general specifications, refer to the respective PLC User's manual Hardware

Edition.		
Item	Specification	
Dielectric withstand voltage	500 V AC for one minute	Between all terminals and ground terminal of PLC
Insulation resistance	5 MO or more by 500 V DC	main unit

4.4 Performance Specifications

Item	Specification	
item	Voltage input	Current input
Analog input range	0 to 10 V DC (Input resistance: 198.7 kΩ)	4 to 20 mA DC (Input resistance: 250 Ω)
Maximum absolute input	-0.5 V, +15 V	-2 mA, +30 mA
Resolution	2.5 mV (10 V/4000)	5 μA (16 mA/3200)
Total accuracy	±0.5 % (±50 mV) for full scale of 10 V (when ambient temperature is 25 °C±5 °C) ±1.0 % (±100 mV) for full scale of 10 V (when ambient temperature is 0 °C to 55 °C)	• ±0.5 % (±80 μA) for full scale of 16 mA (when ambient temperature is 25 °C±5 °C) • ±1.0 % (±160 μA) for full scale of 16 mA (when ambient temperature is 0 °C to 55 °C)
Input characteristics	4080 4000 Do halo on the second of the sec	3280 3200 3200 0 0 0 0 0 0 4mA -> 20mA 20.4mA Analog input

nance Specifications of Analog Output

Item Specif		ication	
item	Voltage output	Current output	
Analog output range	0 to 10 V DC (External load: 5 k Ω to 1 M Ω)	4 to 20 mA DC (External load: 500 Ω or less)	
Resolution	2.5 mV (10 V/4000)	4 μA (16 mA/4000)	
Total accuracy	• ±0.5 % (±50 mV) for full scale of 10 V (when ambient temperature is 25 °C±5 °C) • ±1.0 % (±100 mV) for full scale of 10 V (when ambient temperature is 0 °C to 55 °C) If the external load resistance (Rs) is less than 5 kΩ, the accuracy will be increases as shown in the following formula: (Addition will be 100 mV per %.)	• ±0.5 % (±80 μA) for full scale of 16 mA (when ambient temperature is 25 °C±5 °C) • ±1.0 % (±160 μA) for full scale of 16 mA (when ambient temperature is 0 °C to 55 °C)	
Output characteristics	Analog Operation of State of S	20mA Analog 4mA Digital input	

Common Specifications of Analog Input and Output	
Item	Specification
Digital input and output	12 bits, binary
Conversion time	 FXSU/FX3UC Series PLC: 80 μs for each selected input channel + 40 μs for each selected output channel (The data will be updated at every scan time of the PLC.) FXSS/FX3G/FX3GC Series PLC: 90 μs for each selected input channel + 50 μs for each selected output channel (The data will be updated at every scan time of the PLC.)
Insulation method	A photocoupler is employed to insulate the analog input and output area from the PLC. A DC/DC converter is employed to insulate the power supply line from the analog input and output area. Channels are not insulated from each other.
Occupied	0 point (This number is not related to the maximum number of
