5. Ordering Information

1.a. Description

The PCIe x16 Gen 2 expansion kit is used to extend the PCI Express bus from a host server to an external PCIe I/O board. The host adapter card inserts into a PCIe slot of the server. It then cables to a downstream target adapter card. The target adapter card inserts in the OSS Gen 2, 2-slot backplane. The I/O board then inserts in the other slot of the backplane.

The host adapter installs in the PCIe x16 slot of the host motherboard. It then cables to the target adapter card and installs in the appropriate slot of the 2-slot backplane. A third party I/O card installs in the second slot of the 2-slot backplane. The I/O card then appears to the host system as host of that system.

Gen 2 products operate at 5Gb/s per lane, or twice the bandwidth of Gen 1 products. Therefore, PCIe x16 Gen 2 products operate at 20Gb/s when inserted in a 16 slot.

2. Component Identification

2.a. Host cable adapter

The host adapter inserts into the host computer's PCIe x16 slot. The host cable adapter (Part # OSS-PCIe-HIB25-x16-H) allows communication between a processor and an I/O point.

Connector

2.b. Target cable adapter

The target adapter (Part# OSS-PCIe-HIB25-x16-T) inserts into the slot closest to the ATX power connector of the 2-slot backplane.

2.c. HIB25 x16 Specification

Electrical/Mechanical Specifications	
Form Factor:	PCIe x16 add-in card
Dimensions (H x L):	6.125 x 2.75 inches
Front Panel Connectors:	One PCIe x16 cable connector
Front Panel Indicators:	Power On / Cable Present LEDs
Power Consumption (designed to meet the following conditions) 3.75W typical, 3.3@1.3A	
Operating Environment (designed to meet the following conditions)	
Temperature Range:	0° to 50°C (32° to 122°F)
Relative Humidity:	10 to 90% non-condensing
Shock:	30g acceleration peak (11ms pulse)
Vibration:	5-17 Hz 0.5" double amplitude displacement; 7-2000Hz, 1.5g acceleration.
Redriver: Pericom PI2EQX5804	
Agency Compliance: UL60950.FCC Class B, CE safety and emissions	

2.d. OSS 2-slot backplane
The 2-slot backplane can be installed in a separate enclosure to support the target adapter and an I/O card.
Note: See section 4 Technical Information for slot pin outs.

Target Slot   ATX power connector   Power supply on header   Endpoint Slot
3. Installation Instructions

3.a. Installing Adapter Kit

    1)   Insert the upstream host cable adapter into an appropriate PCIe slot of the host computer.

3.b. When using with the 2-slot Backplane:

    2)   Insert the downstream target cable adapter into the PCIe slot closest to the white ATX power connector, labeled TARGET on the 2-slot backplane.

    3)   Connect the 2-slot backplane to an ATX power supply separate from the host system power supply. Note: Sometimes an external load is necessary for ATX power supplies to regulate properly. (I.e. – connecting hard drive power)

    4)   Insert the PCI add-in board in the ENDPOINT slot on the 2-slot backplane.

    5)   Connect the PCIe cable to both the upstream and the downstream cable adapters.
    6)   Turn on the power supply to the 2-slot backplane. The 3V aux LED will light. NOTE: The power supply and 2-slot backplane will not power up at this time.

    7)   Turn on the host system. Signals across the PCIe cable will cause the 2-slot backplane to power up. The power and cable LEDs on the upstream and downstream cable adapters will light.

3.c. When using with any third party device:

    1)   Install the downstream board into the appropriate PCIe slot.

    2)   Connect the external power source (separate from the host system power supply) to the downstream device if necessary.

    3)   Connect the PCIe cable to both the upstream host adapter and the downstream device.

3.d. Removing PCIe cable:

    1)   To remove PCIe cable pull back on green thumb tab to release metal pins and gently separate.
4. Technical Information

The transmit and receive signals on the OSS-HIB25-x16 are driven and conditioned by Pericom redriver chips. Adjustments can be made to equalization, de-emphasis and output swing. These controls are factory set by the use of zero Ohm resistors. In the following tables a 0 indicates that a zero Ohm resistor has been installed and a 1 indicates no resistor. In rare cases, mostly where non-OSS equipment is used with the HIB25-x16, these adjustments may need to be changed. The following tables are made available for this purpose. It is highly recommended to contact OSS customer support before making changes to these settings.

4.a. Signal Adjustment

Equalizer Selection

SEL_2[A:D]	SEL_1[A:D]	SEL_0[A:D]	@1.25GHZ	@2.5GHZ	
0	0	0	0.5dB	1.2dB	Edge Default
0	0	1	0.6dB	1.5dB	
0	1	0	1.0dB	2.6dB	
0	1	1	1.9dB	4.3dB	
1	0	0	2.8dB	5.8dB	
1	0	1	3.6dB	7.1dB	Cable Default
1	1	0	5.0dB	9.0dB	
1	1	1	7.7dB	12.3dB	

Output Swing Control

S_1[A:D]	S_0[A:D]	Swing (Diff. VPP)	
0	0	1V	Cable Default
0	1	05V	
1	0	0.7V	Edge Default
1	1	0.9V	

De-emphasis Adjustment

D2_[A:D]	D1_[A:D]	D0_[A;D]	De-emphasis	
0	0	0	0dB	SW=ON Default
0	0	1	-2.5dB	
0	1	0	-3.5dB	
0	1	1	-4.5dB	
1	0	0	-5.5dB	
1	0	1	-6.5dB	SW=OFF Default
1	1	0	-7.5dB	
1	1	1	-8.5dB	

4.b. Pin Assignments

Connectors PCIe x16 Card Edge Connector

- The pins are numbered as shown with side A on the top of the centerline on the solder side of the board and side B on the bottom of the centerline on the component side of the board.
- The PCIe interface pins PETpx, PETnx, PERpx, and PERnx are named with the following convention: "PE" stands for PCIe high speed, "T" for Transmitter, "R" for Receiver, "p" for positive (+), and "n" for negative (-).
- Note that adjacent differential pairs are separated by two ground pins to manage the connector crosstalk.

Pin-out for the PCIe x16 Card Edge Connector on the Host Cable Adapter

Pin #	Side B		Side A	
	Name	Description	Name	Description
1	N/C	N/C	PRSNT1#	Hot-Plug presence detect
2	N/C	N/C	N/C	N/C
3	N/C	N/C	N/C	N/C
4	GND	Ground	GND	Ground
5	NC	N/C	N/C	Not connected
6	N/C	N/C	JTAG3	TDI (Test Data Input)
7	GND	Ground	JTAG4	TDO (Test Data Output)
8	+3.3V	3.3 V power	N/C	Not connected
9	N/C	Not connected	N/C	Not connected
10	3.3Vaux	3.3 V auxiliary power	+3.3V	3.3 V power
11	N/C	N/C	PERST#	Fundamental reset
Mechanical key				
12	RSVD	Reserved	GND	Ground
13	GND	Ground	REFCLK+	Reference clock (differential pair)
14	PETp0	Transmitter differential pair, Lane 0	REFCLK	
15	PETn0		GND	Ground
16	GND	Ground	PERp0	Receiver differential pair, Lane 0
17	PRSNT2#	Hot-Plug presence detect	PERn0	
18	GND	Ground	GND	Ground
19	PETp1	Transmitter differential pair, Lane 1	RSVD	Reserved
20	PETn1		GND	Ground
21	GND	Ground	PERp1	Receiver differential pair, Lane 1
22	GND	Ground	PERn1	
23	PETp2	Transmitter differential pair, Lane 2	GND	Ground
24	PETn2		GND	Ground
25	GND	Ground	PERp2	Receiver differential pair, Lane 2
26	GND	Ground	PERn2	
27	PETp3	Transmitter differential pair, Lane 3	GND	Ground
28	PETn3		GND	Ground
29	GND	Ground	PERp3	Receiver differential pair, Lane 3
30	RSVD	Reserved	PERn3	
31	PRSNT2#	Hot-Plug presence detect	GND	Ground
32	GND	Ground	RSVD	Reserved

Notes:

1 Optional signals that are not implemented are to be left as no connects on the board side connector.

2 Reserved signals must be left as no connects on the board side connector.

3 Although support of CWAKE# is optional from the board side connector perspective, an allocated wire is mandated for the cable assembly.

4 Board side pin-out on both sides of the Link is identical. The cable assembly incorporates a null modem for the PCIe transmit and receive pairs.

Signal Descriptions

PETp(x)	PCI Express Transmit Positive signal of (x) pair.
PETn(x)	PCI Express Transmit Negative signal of (x) pair.
PERp(x)	PCI Express Receive Positive signal of (x) pair.
PERn(x)	PCI Express Receive Negative signal of (x) pair.
CREFCLK+/-	Cable REFerence CLocK: Provides a reference clock from the host system to the remote system.
SB_RTN	Side Band ReTurN: return path for single ended signals from remote systems.
CPRSNT#	Cable PReSeNT: Indicates the presence of a device beyond the cable.
PWR	PoWeR: Provides local power for in-cable redriver circuits. Only needed on long cables. Power does not go across the cable.)
PWR_RTN	PoWeR ReTurN: Provides local power return path for PWR pins.
CWAKE#	Cable WAKE
CPERST#	Cable PCI Express Reset
