Q: How can I change languages if I mistakenly choose an unknown language?

- Find setting icon  and access Settings.
- Choose icon  to enter language & input setting, the first option is language setting.

Q: How can I change input?

- Access Setting – Language & input, and set default input.

Q: I have already installed some applications, but I can not find them now, why does it happen?

- Some applications may be installed in external TF card, if you fetch out the TF card from the tablet, you will not see these apps.

Q: There are many popups of system error, what can I do?

- Restart the tablet by POWER button, or by RESET. Use a thin stick to prick the RESET and restart the tablet.
- If you have restarted the tablet and there are still error popups, you can check active applications to see if there is any unknown application, remove it if any.
- There may be virus in the device, please install security apps and protect your tablet.

Reset & Recharging

Reset

- If the device is halted or crashed, and can not be turned off by POWER button, users can launch the RESET function.

Recharging

- When the device can not be turned on normally or shut down automatically, it may need to be recharged.
- Please use the correct charger as the manufacturer guides.

About Firmware

Firmware contained in the tablets provides the control program for the device, and it is offered by the original manufacturer. Flashing firmware (refer to rebuilding firmware into the device) is the final solution to serious system problems. For common breakdown you can just restart the device, or run factory reset. If system crashes appear continuously even you have run factory reset, you can flash firmware under professional guidance. The firmware preloaded in the device is a stable version for the tablet, please do not flash it with other versions of firmware unless there is absolute necessity. We do not suggest any private firmware flashing without guidance of the original manufacturer, who is not responsible for any possible breakdown of the tablet caused by user's private firmware flashing.
