Thank you for purchasing one of the most feature-rich keyboard, video, and mouse switches on the market. IOGEAR's USB KVM switches are first-rate connectivity accessories designed to help reduce the frustration of managing multiple computer systems. With the MiniView™ II USB KVM series by IOGEAR, you can access multiple computers from a single console(keyboard, mouse and monitor). The MiniView™ II USB KVM provides two convenient methods to access connected computers. Change ports easily via the push button selection switches located on the unit's front panel, or by entering Hot Key combinations from the keyboard or OSD (On Screen Display). Setup is fast and easy; plugging cables into their appropriate ports is all that is entailed.

We hope you enjoy using your MiniView™ II USB KVM switch, yet another first-rate connectivity solution from IOGEAR.

This package contains:

- 1 MiniView™ II USB KVM Switch (GCS124U)
- 1 User Manual
- 1 Registration Card
- 4 Premium Bonded USB KVM cables (2-4ft & 2-6ft)
- 1 Power Adapter
- 1 Quick Start Guide

If any items are damaged or missing please contact your dealer.

Overview

Overview

The MiniView™ II USB KVM Switch (GCS124U) is a control unit that allows access to four computers from a single console (keyboard, mouse and monitor). Before the development of the MiniView II, the only way to control multiple computer configurations from a single console was through a complex and costly network system.

Setup is fast and easy, plugging cables into their appropriate posts is all that is entailed. There is no software to configure, so there is no need to get involved in complex installation routines or be concerned with incompatibility problems. Since the MiniView™ II intercepts USB keyboard input directly, it works on any hardware platform and with all operating systems.

The MiniView™ II USB KVM provides convenient methods to access the computers connected to the USB KVM system. The MiniView™ II USB KVM offers push button selection switches located on the units front panel, Hot Key controls from the USB keyboard, and an On Screen Display (OSD).

There is no better way to save time and money than with a MiniView™ II USB KVM. By allowing a single console to manage the attached computers, the MiniView™ II USB KVM eliminate the expense of purchasing a separate keyboard, monitor and mouse. Additionally, it saves space taken up by the additional hardware and eliminates the inconvenience of switching from the different computer systems.

Features

Features

- Premium Bonded USB KVM Cables Included
- Patented VSE (Video Signal Enhancement) Technology for Superior Video Quality
- Patented USB Sniffing Technology
- USB Compatible Mouse Support - Microsoft® Intellimouse Pro & Logitech FirstMouse Support
- Keyboard and Mouse Emulation for Error Free Switching and Booting
- No Delay Between Switching
- Daisy Chainable (control upto 64 USB computers)
- Easy to install - No Software Required
- Computer Selection Via Push Button Switches, Keyboard HotKeys or OSD (On-Screen-Display)
- Auto Scan Function for Monitoring Computer Operation
- Supports up to 1920 x 1440
- LED Display For Easy Status Monitoring
- Easy to Operate

Features

Features Continues...

- Unit Can Operate without Power Adapter
- DC Input for External Power Supply
- Hot Swappable
- Rackmountable with optional Rack Mount Kit
- 3 Year Warranty

Requirements

Requirements

- USB Enabled Computer
- VGA (or compatible) Type Video Port

MACs: OS 8.6 or greater with latest USB updates

PCs: WIN 98 or greater with USB support

Accessories:

- IOGEAR USB Hub (GUH7144) Expand your USB set up with one of our USB hubs.
- 10' Bonded USB KVM Cable (G2L1203U), 6' Bonded USB KVM Cables (G2L1201U)
- Rack Mount Kit for the GCS124U - (G2X007)

- A great add on for rack mounted computer set up
- Size 1U, fits all rack system set ups- 19" Racks

- IOGEAR has a full line of KVM, FireWire, USB, USB 2.0, and ShareView products. Please visit our website at www.iogear.com for further information.

Introduction

Introduction on MiniView™ II USB KVM

The MiniView™ II GCS124U is a USB KVM switch that controls access to multiple computers from a single console (keyboard, monitor, and mouse). Before the development of the MiniView™ II USB KVM, the only way to control multiple computer configurations from a single console was through a complex and costly network system. Now, with the MiniView™ II USB KVM, you can easily access multiple computers in a simple and cost effectively manner.

One MiniView™ II USB KVM can control up to four PCs. Units can be cascaded to three levels, which means that as many as 21 MiniView™ II USB KVM units can control up to 64 PCs - all from a single console.

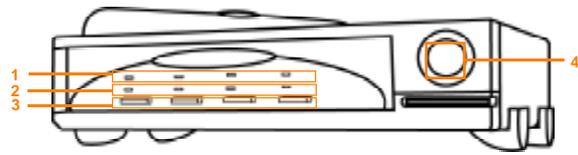

Setup is fast and easy; just plug the cables into their appropriate ports. There is no software to configure so there is no need to get involved in complex installation routines or be concerned with incompatibility problems. Since the MiniView™ II USB KVM accepts keyboard input directly, it works virtually any hardware platform with all operating systems.

The MiniView™ II USB KVM provides three convenient methods to access any PC connected to the system: (1) using the port selection buttons on the front panel of each unit; (2) entering *Hotkey* combinations from the keyboard; and (3) selecting from on-screen menus through the On Screen Display (OSD) feature. In addition, a powerful *Quick View Scan* feature allows you to auto scan and monitor the activities of all operating PCs on the installation one by one.

There is no better way to save time and money than with a MiniView™ II USB KVM. By allowing the MiniView™ II USB KVM to manage all the attached PCs, there is no need to purchase a separate keyboard, monitor, and mouse for each PC, saving an enormous amount of space. It also eliminates the inconvenience and wasted effort involved in constantly moving around from one PC to another.

Introduction

Front View

1. On-Line LEDs

These LEDs indicate that a computer is properly connected to the switch, powered on and operational.

2. Selected LEDs

These LEDs indicate the currently selected port.

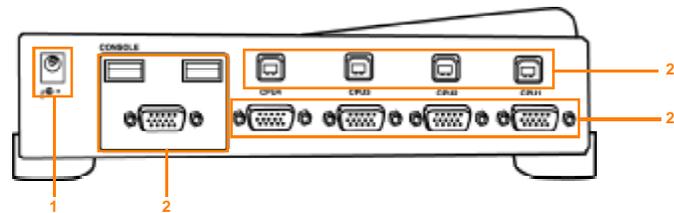

3. Port Selection Switches

The Port Selection Switches are located on the front panel. Just below the Selected LEDs. Press the push buttons to select the computer of your choice.

4. Auto Scan Switch

This push button toggles Auto Scan Mode for the MiniView™ II USB KVM.

Back View

1. Power Jack

Port for power adapter

2. Console Port Section

VGA console port for your monitor / USB ports for keyboard, and mouse

3. Console Port Section (USB Port)

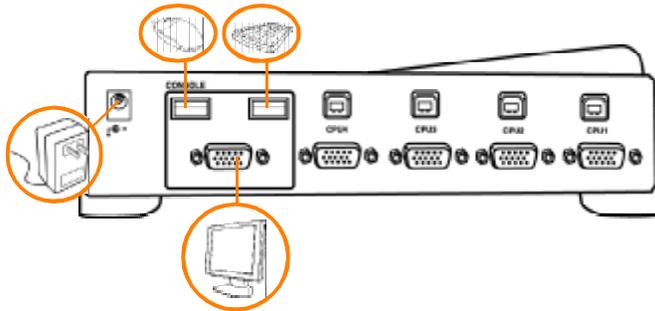

USB ports to connect your computer via our premium bonded USB KVM cable

4. Console Port Section (VGA Port)

VGA ports to connect to your computer via our premium bonded USB KVM cables

Installation

Setup and Installation

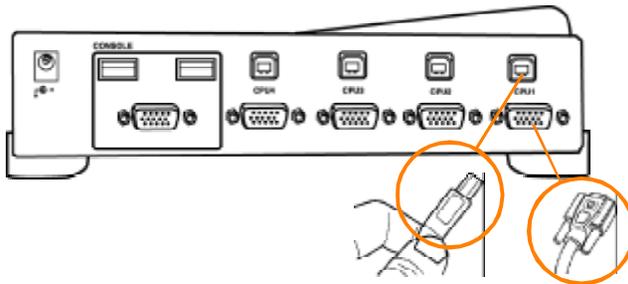

Step.1(Power Adapter / Console Connection)

* Before you begin, please make sure that the power to all devices has been turned off.

1. Plug your USB Mouse, USB Keyboard, and Monitor into the console area on the KVM switch
2. Plug the power adapter into the power adapter port.

Installation

Setup and Installation

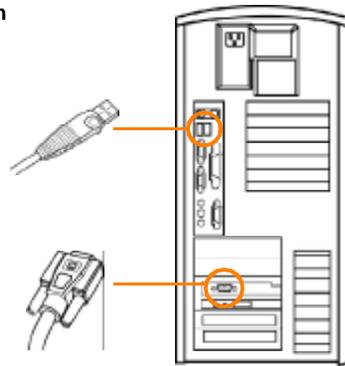

Step. 2 (Console Connection)

1. Connect the cables that came with the MiniView™ II USB KVM switch to the KVM switch's CPU ports.

Installation

Setup and Installation

Step. 3 (Cable Connection)

1. Connect the other end of the cables that came with the MiniView™ II USB KVM switch to your computer.
2. Once complete, turn the USB KVM switch on.
3. Then turn on the power to the connected computers.

Operation

Operation

Controlling the computers on your MiniView™ II USB KVM (GCS124U) from a single console could not be easier. The switch has three port selection methods providing you with instant access to your computers.

- Manual Port Selection
- HotKey Port Selection
- Daisy Chain Port Selection

Selecting the Active Port

Each CPU port is assigned a numeric ID (1-4). You can directly access any computer connected to the KVM with a hotkey combination that specifies the ID of the CPU port.

Press and release each of the following keys, in order, until complete

- [control] Press the control key once
- [1, 2, 3, 4] Enter the number of the port you wish to switch to.
- [ENTER] Pressing enter completes the port selection process

Forward/Back mode

This feature allows you to switch between computers in order to monitor them manually. You can dwell on a particular post for as long or as little as you like as opposed to Auto Scan Mode, which switches after a fixed interval. To invoke Last/Next Mode, press the following keys.

1. Press and release [F1] twice to move Back through the USB KVM Ports
2. Press and release [F4] twice to move FORWARD through the USB KVM Ports

Operation

Operation cont.

Once scanning begins it will continue until you press the spacebar or the round button on the front of the USB KVM. The port last seen during the scan will become the active port.

NOTE: While Auto Scan Mode is in effect none of the basic keyboard keys will function until you end the auto scan.

OSD Overview

On Screen Display (OSD) provides a menu driven interface to handle PC switching Procedures. All operations start from the OSD Main Screen. To activate the OSD, Tap the CTRL key twice, [ctrl][ctrl].

NOTE: If using the control key conflicts with applications running on any of the Computers, you can change the OSD Activation Hotkey to [Scroll Lock] [Scroll Lock].

The OSD always starts in LIST view with the Highlight bar at the same position it was in the last time it was closed.

The Port Number (PN) for each computer is shown in the left most column on the list. You can directly access any port by using Navigation keys to move the Highlight bar to the desired port and press [ENTER].

The computers port number is derived from the CPU port (1-4) on the GCS124U back panel that the computer is connected to. For example to access a computer connected to port 3 you would move up or down the list with the arrow keys and press enter once port 3 is highlighted. Remember: The port number for a computer connected to a daisy chained GCS124U is a 2 digit number. The first digit represents the CPU Port number of the primary USB KVM and the second digit represents the CPU Port number of the secondary USB KVM that the computer is connected to. For example to access a computer connected to CPU Port 3 of the secondary USB KVM, scroll down the list and press enter on 2-3.

Operation

Navigation:

To exit from the OSD menu at any thime press [ESC]
Use the Up and Down arrow keys to move through the list one line at a time
Use [PG UP] and [PG DOWN] to move up or down through the list, one screen at a time
To activate a port move the Highlight Bar to the desired port and press [ENTER]

Function Keys:

With the OSD activated, pressing a function key (F1-F6) brings up a related sub menu that is used to configure and control the OSD.

F1 GOTO: After pressing F1 select the desired port number or port name and press [ENTER]. Your monitor will now display the selected computer.

Operation

F2 SCAN:

Pressing F2 initiates the Scan Mode in which the KVM cycles through all the ports that have been selected for scanning within the List settings (F3). When you want to stop at a particular location or stop the scanning process simply press the [spacebar] or the round button on the front of the USB KVM.

NOTE:

1. If the scanning stops on an empty port or one where the computer is powered off the monitor screen will be blank and the mouse and keyboard will have no effect. To recover activate the OSD and choose any powered on or Functioning computer.
2. As the OSD cycles through the selected ports an S Appears in front of the Port ID display as each computer is accessed to indicate that the computer is being accessed under QUICK VIEW scanning
3. If a particular port has not been selected in the list menu (See F3 List) the scan will not display that computer

F3 LIST:

This function brings up a submenu that lets you broaden or narrow the scope of which ports the OSD lists. This will be different for each console depending on the choices made for that console. The choices and their meanings are given in the Table below:

To make a choice, move the highlight bar to the desired selection and press [ENTER]. An icon will appear before the selected line to indicate that it is currently selected.

NOTE:

1. You can access any port on any list by using the Navigation Keys then Pressing [ENTER].
2. If you select a port that does not have a computer attached to it, or if the attached computer is powered off, the OSD will still switch to it showing a blank screen.

Operation

F4 QV (quick view):

You can broaden or narrow the number of ports that get automatically scanned by selecting only the ones you want within this menu. To select/deselect a port for Quick View:

1. Use the up and down arrow keys to move the highlight bar to the desired port.
2. Press F4

When a port has been selected for Quick View scanning an arrowhead displays in the FQ Column. When a port is deselected the arrowhead will disappear.

F5 EDIT:

Here you can name each of your ports allowing you to easily identify each connected computer.

1. Use the navigation key to move the highlight bar to the port you want.
2. Press F5
3. Key in the new port name or modify/delete the old one.

The maximum number of characters allowed for a port name is 15 Legal Characters include

All alpha characters a-z; A-Z

All numeric characters 0-9

Any of the following (-)(:)(,)(Space)

The OSD is not case sensitive so it will not matter if the OSD displays the port name in all capitals or other. When you finish editing, press [ENTER] to have the change take effect. To abort the change Press ESC.

Operation

F6 SET:

When you press F6 a submenu appears that allows you to configure the OSD settings for the console you are working at. To change the settings use the up and down keys to move the highlight bar to the desired menu item and press [ENTER].

If a sub menu has further choices to select from move the highlight bar to the desired menu option and press [ENTER].

Refer to the table below for menu / submenu navigation.

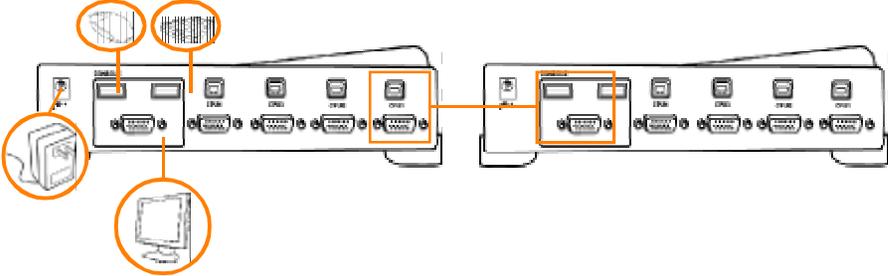

Daisy Chaining:

The Connection

What You Need:

- One (1) of the following cables for each additional USB KVM added (6ft G2L1201U or 10ft G2L1203U).
- One (1) additional GCS124U for each new daisy chain level.

Daisy Chaining the GCS124U is very simple. Simply purchase a second unit (up to 3 additional units/levels deep) and a USB KVM cable and connect the 2nd USB KVM's console port on the primary USB KVM.

Operation

Daisy Chain Port Selection:

Each CPU port is assigned a numeric ID (1-4). Each daisy chained MiniView™ II USB KVM is also assigned a numeric ID (1-4). You can directly access any computer connected to the KVM and each additional daisy chained KVM with a hotkey combination that specifies the ID of the CPU port and the ID of the daisy chained CPU port.

The idea behind selecting computer through daisy chained KVMs is to select the KVM CPU port that the daisy chained KVM is attached. Once that port is selected you can select the port of the computer you wish to access. The key commands are as follows:

Press and release each of the following keys, in order, until complete.

- [control] Press the control key once
- [1, 2, 3, 4] Enter the number of the port that the daisy-chained computer is connected.
- [1, 2, 3, 4] Enter the number of the daisy-chained KVMs port you wish to switch to.
- [ENTER] Pressing enter completes the port selection process.

Operation

A typical daisy chain set up and command sequence may look like the following.

You have 7 USB computers. 3 of the computers are connected to the primary USB KVM. A secondary USB KVM is connected to port 4 on the first USB KVM. The additional 4 computers are then connected to the Secondary USB KVM>

If I wanted to view and use computer number 6 I would use the following key sequence:
[control]+[4]+[3]+[ENTER]

Now you try... ;-)

Appendix

HotKey Commands (Model: GCS124U)

Combination	Action
[Ctrl]+[Ctrl]	Opens OSD Menu
or [scroll lock] + [scroll lock]	
[ctrl]+[1 or 2 or 3 or 4] + [Enter]	To select desired port
Humidity	Toggle backward through ports
Housing	Toggle forward through ports
Weight	To activate auto scan

Appendix

Troubleshooting (Model: GCS124U)

Note: If the unit appears to be operating erratically, check all cables for damage and to be sure that they are properly connected. If you are operating under nonpowered mode, use the external power adapter.

If you need further assistance please check out our IOGEAR Tech Info Library (T.I.L.) at www.iogear.com/support for the latest tips, tricks, and troubleshooting. The IOGEAR T.I.L. was designed to provide you with the latest technical information about our products. Most of the answers to your questions can be found here, so please try it out before contacting technical support.

Technical Support is available Monday through Friday from 8:00am to 5:00pm PST and can be reached at 949-428-1111.

Specification

Product Specification (MODEL: GCS124)

Function		Specification
Power Consumption		DC 9V, 600mA
Computer Connections		4 USB enabled computers (up to 64 when daisychained)
Port Selection		Push button Switches; Hotkeys, OSD
LEDs		4 (Green) & 4 (neon Blue)
Connectors	USB type A Port	1 USB Keyboard Port (type A) - Console
		1 USB Mouse Port (type A) - Console
	USB type B Port	4 USB type B ports (Mouse and Keyboard shared port) - Computer
	Video	1 VGA (HD15F) Port - Console
4 VGA (HD15M) Ports - Computer		
Scan Intervals		5 & 15 Second

Specification

Function	Specification
Resolution	1920 x 1440
Operating Temp	5° ~ 40°C
Storage Temp	-20° ~ 40°C
Humidity	0 - 80% RH
Housing	Metal
Weight	2.9 lb
Dimension (LxWxH)	8.8 x 6.0 x 2.0 in
