

CAT#	Product Description	Size	Price(Rs.)
 <p>Founded in Göttingen, Germany in 1985, Biometra develops, manufactures and markets innovative products for molecular biology and biochemistry laboratories. Core technologies include the development and production of Peltier driven Thermocyclers and advanced Electrophoresis Instruments.</p>			

Tpersonal

- Fast ramping rates thanks modern Peltier technology
- Small footprint and high sample capacity
- Three different block formats

High speed thermocycling
Using the latest in Peltier technology the Tpersonal achieves excellent heating and cooling rates.

Flexibility
Three different Tpersonal versions are available.
-The Tpersonal 48 holds 48 x 0.2ml tubes, strips or 48 well microplates.
-The 20 well version is designed for 0.5 ml tubes.
-Combi block provides the maximum flexibility, which can hold both 0.2 and 0.5ml tubes.

Fits on any bench
The Tpersonal is a highly integrated thermocycler. With a footprint of only 22 x 31cm it occupies minimum bench space.

- Higher speed thanks to latest Peltier Technology.
- Better programming due to completely revised software.
- Bigger memory with program storage in individual subdirectories.

New Technology for a proven concept
The T3000 Thermocycler represents the technological advancement of one of the most successful thermocyclers in Biometras history. Following the approved triple block concept, the new T3000 has been equipped with the latest in Peltier Technology to achieve excellent heating and cooling rates. Also the software has been completely revised for improved user friendliness.

T3000

050-920	T1 plus Thermocycler 48 for PC control (48 x 0.5 ml)		POR
050-921	T1 plus Thermocycler 96 for PC control (96 x 0.2 ml or 96 well microplates)		POR
050-922	T1 plus Thermocycler 384 for PC control (384 well microplates)		POR
050-923	T1 plus Thermocycler in situ for PC control (4 microscope slides)		POR
050-924	T1 plus Thermocycler Combi for PC control (38 x 0.5 ml or 96 x 0.2 ml tubes)		POR

TGRADIENT

With the TGradient annealing temperatures of new primers can be optimized in a single run. Due to a temperature gradient across the block during the annealing step, each row represents an individual temperature. Thus 12 different temperatures can be tested in a single run. After the program is completed and samples have been analyzed in a gel, according annealing temperatures can be retrieved from the instruments gradient calculator.

050-800	TGradient Thermocycler 48 for 48 tubes (0.5 ml)		POR
050-801	TGradient Thermocycler 96 for 96 tubes (0.2 ml) or 96 well microplates		POR
050-802	TGradient 384 for 384 well microplates (non-gradient)		POR
050-803	TGradient in situ for 4 microscope slides (non-gradient)		POR
050-720	T3000 Thermocycler 20 for 3 x 20 tubes (0.5 ml)		POR
050-723	T3000 Thermocycler 48 for 3 x 48 tubes (0.2 ml)		POR
050-724	T3000 Combi for 0.5 ml tubes (3 x 18) or 0.2 ml tubes (3 x 48)		POR

TProfessional

The TProfessional Thermocycler is inspired by the wish to simplify molecular biology research. It combines high speed cycling with ultimate ease of programming.

- High Speed Silver block
- Large graphical display
- Quick block exchange

The TProfessional User Interface incorporates Biometra's proven spreadsheet programming philosophy. Avoiding endless serial program windows, all steps of a program are entered in a single screen. This makes the creation of new or editing existing programs fast and easy. One touch leads from the spreadsheet to an alternative graphical programming mode. The TProfessional manages up to 30 individual users (optionally password protected) and features larger memory for increased program capacity.

The TProfessional offers five different block modules that can be exchanged in less than 10 seconds. The 96 well and 60 well modules are available with gradient option for quick optimization of new protocols.

To achieve ultimate performance the 96 well and 60 well modules are made of silver. Due to its excellent heat conductivity silver equilibrates extremely quickly, thus providing maximum speed and temperature uniformity. To protect the valuable silver blocks against corrosion, the block surfaces are covered with a thin gold layer.

070-801	Tprofessional Gradient for 96 tubes (0.2 ml), strips or 96 well microplates		POR
070-901	Tprofessional 96 for 96 tubes (0.2 ml), strips or 96 well microplates		POR
070-902	TProfessional 384 for 384 well microplates item will be discontinued after stock is sold out		POR

Thermocycler - modules (Accessories)			
050-910	T1 module 48 for 48 tubes (0.5 ml)		POR
050-911	T1 module 96 for 96 tubes (0.2 ml) or 96 well microplates		POR
050-912	T1 module 384 for 384 well microplates		POR
050-913	T1 module in situ for 4 microscope slides		POR
050-914	T1 module Combi for 40 x 0.5 ml or 96 x 0.2 ml tubes		POR
050-810	TGradient module 48 for 48 tubes (0.5 ml)		POR
050-811	TGradient module 96 for 96 tubes (0.2 ml) or 96 well microplates		POR
050-812	TGradient module 384 for 384 well microplates (non gradient)		POR
050-813	TGradient module in situ for 4 microscope slides (non gradient)		POR
070-811	TProfessional module Gradient for 96 tubes (0.2 ml), strips or 96 well microplates		POR
070-911	TProfessional module 96 for 96 tubes (0.2 ml), strips or 96 well microplates		POR
070-912	TProfessional module 384 for 384 well microplates Thermocycler - Accessories		POR

Software			
050-930	Upgrade from T1 to T1 plus		POR
050-821	Serial cable to connect Tgradient / T1 to a PC (9/25pole-9/25-pole SubD)		2,802
050-822	PCI serial interface card (4 Ports), for connecting 4 thermocyclers to a PC		29,592
050-823	PCI serial interface card (8 Ports), for connecting 4 thermocyclers to a PC		42,675

Thermocycler calibration			
050-410	Portable system for temperature check and calibration of thermocyclers (PTMD)		POR
050-411	sensor for 0.5 ml wells (PTMD)		41,740
050-412	sensor for 0.2 ml wells (PTMD)		41,740

Reaction tubes			
050-310	0.2 ml tubes, 1.000 pcs./pckg., transparent, with caps		9,033
050-320	0.5 ml tubes, 1.000 pcs./pckg., transparent, with caps		6,074

CAT#	Product Description	Size	Price(Rs.)
050-214	250 strips with 8 tubes and 8 caps (0.2 ml), transparent		35,822
Microplates			
050-225	48 well microplate, 50 pcs./pckg.		15,263
050-213	96 well microplate Polypropylene, skirtless , 25 pcs.		14,485
050-232	96 well microplate Polypropylene with skirt, 25 pcs.		13,394
Recommended Standard			
050-231	384 well microplate HSQ, 50 pcs./pckg.		56,380
050-240	384 well microplate Polypropylene, 50 pcs./pckg.		47,970
050-194	96 well Aluminum plate for temperature equilibration of microplates		13,394
050-694	384 well Aluminum plate for temperature equilibration of microplates		31,928
Microplate sealing			
050-219	300 strips with 8 caps, for 48-well microplates		9,968
050-237	Silicone mat, 50 pcs./pckg.		18,223
050-250	Adhesive sealing film		15,107
050-251	Nop mat 96 wells, 20 pcs.		12,148
050-252	Nop mat 384 wells, 20 pcs.		18,067

Biometra offers a comprehensive range of instrumentation for gel electrophoresis.

“Separation of proteins“ contains numerous instruments for Polyacrylamide Gel Electrophoresis (PAGE) and related techniques.

For “Separation of DNA and RNA“ biometra offers various systems for agarose gel electrophoresis.

Fast and convenient mutation analysis is achieved with Temperature Gradient Gel Electrophoresis (TGGE). Biometra is the exclusive licensee for TGGE instrumentation.

In addition to agarose gel separation of nucleic acids biometra provides different systems for manual Sequencing.

Suitable Power Supplies are available for all electrophoresis chambers or blot apparatus.

For the Blotting applications biometra offers various instruments for blot transfer of nucleic acids and proteins.

ELECTROPHORESIS			
Polyacrylamide Gel Electrophoresis (Vertical System) Minigel and Minigel-Twin - systems			
010-000	Minigel, complete system with 1 set of glass plates with fixed 1.0 mm spacers, 1 comb (10 wells), 1 set of clips (3 pcs), 1 silicone rubber seal and manual; gel size: 8.6x7.7 cm		39,930
010-040	Minigel, complete system with 1 set of glass plates with fixed 0.6 mm spacers, 1 comb (10 wells), 1 set of clips (3 pcs), 1 silicone rubber seal and manual; gel size: 8.6x7.7 cm		39,930
010-030	Minigel, without accessories; buffer chamber, safety lid and manual		34,422
010-100	Minigel-Twin, complete system with 2 sets of glass plates with fixed 1.0 mm spacers, 2 combs (10 wells), 2 sets of clips, 2 silicone rubber seals and manual		46,814
010-140	Minigel-Twin, complete system with 2 sets of glass plates with fixed 0.6 mm spacers, 2 combs (10 wells), 2 sets of clips, 2 silicone rubber seals and manual		49,568
010-130	Minigel-Twin, without accessories; buffer chamber, safety lid and manual		37,177

Accessories - Glass Plates			
010-001	Glass plate with fixed spacers, 1.0 mm		2,803
010-002	Glass plate with fixed spacers, 0.6 mm		2,803
010-003	Notched glass plate with straight edge		2,803
010-004	Notched glass plate with inclined edge		2,803
010-005	Silicone rubber seal, 1.0 mm		935
010-006	Silicone rubber seal, 0.6 mm		935
010-025	Grey seal to be attached to the main chamber (2 pieces)		935
010-007	Clips, 3 pieces		935

Combs, 1.0 mm (max. volume/well)			
010-010	5 wells (70 µl)		3,271
010-011	10 wells (25 µl)		3,271
010-023	10 wells, for big volumes and high protein concentrations (60 µl)		3,271
014-017	16 wells (20 µl)		5,139
010-012	20 wells (15 µl)		3,271
014-019	28 wells (8 µl)		5,139
010-008	preparative, without marker lane (400 µl)		3,271
014-023	preparative, without marker lane (450 µl)		5,139
010-022	preparative, with marker lane (30 & 380 µl)		3,271
010-009	preparative, with 2 marker lanes (2 x 25 and 350 µl)		3,271

Combs, 0.6 mm (max. volume/well)			
010-015	5 wells (40 µl)		3,271
010-016	10 wells (15 µl)		3,271
010-024	10 wells, for big volumes and high protein concentrations (35 µl)		3,271
014-018	16 wells (10 µl)		3,271
010-020	20 wells (9 µl)		3,271

CAT#	Product Description	Size	Price(Rs.)
010-013	preparative, without marker lane (240 µl)		3,271
010-021	preparative, with 1 marker lane (18 and 230 µl)		3,271
010-014	preparative, with 2 marker lanes (2 x 15 and 210 µl)		3,271
010-017	Cooling plate		11,837
010-018	Minigel Glass Plate Stand (for Minigel/Twin)		12,460
010-032	Gel Casting Stand for up to 5 mini-gels		26,477
010-019	Rotary table for twin-Chambers		23,362

Designed for the separation of analytical and semi-preparative quantities of proteins in vertical 11 x 7 cm polyacrylamide (PAGE) gels

- Runs 1 or 2 gels simultaneously
 - Glass plates with fixed spacers
 - One-piece profiled silicone rubber seal for excellent sealing
- The Minigel family features a special system using fixed spacers and a one-piece profiled silicone rubber seal for rapid, complete sealing without the need for additional sealing materials such as agarose or silicone grease. Protection is provided against the neurotoxin acrylamide using the leak-free Biometra casting system. Multigel represents a system for the gel dimension of 11 x 7cm (W x L). The double-gel design permits rapid separation of up to 48 samples (24 samples per gel). Thanks to the built-in water cooling system the Multigel can be used for native gels as well as for SDS-PAGE gels. Additional Multigel offers microtiter plate compatible / multichannel pipette compatible combs. The Rotary Table for twin-chambers allows easy application of samples to the gel by turning the whole chamber.

The new Universal Glass Plate Stand with levelling feet allows casting of up to 4 gels in the stand. The safety lid which comes with all apparatus is designed to protect the user from electrical hazard. A complete range of analytical and semi-preparative combs is available for a maximum of flexibility in electrophoresis.

(Minigel-Twin, Mini-V 8 10, Multigel, Multigel-Long, Model V16-2) Multigel - systems

010-200	Multigel, complete system with 2 sets of glass plates with fixed 1.0 mm spacers, 2 silicone rubber seals, 2 combs (24 wells), 6 clips and manual; gel size: 11x7 cm		POR
010-220	Multigel, complete system with 2 sets of glass plates with fixed 0.6 mm spacers, 2 silicone rubber seals, 2 combs (24 wells), 6 clips and manual; gel size: 11x7 cm		POR

Mini-V 8-10 Gel Casting System

The casting chamber is designed for easy set-up and cleaning and allows to cast 2 to 9 gels simultaneously. A Gradient Former in combination with the luer fitting in the bottom of the casting chamber ensures casting of identical gradient gels. Special separation sheets make separation of gels after polymerization very easy. Displacement blocks permit the casting of various numbers of gels.

Mini V8 10 - Gel Casting System & Accessories

21078027	Mini-V 8-10 Gel Casting System, complete with a casting chamber with threaded posts, one end plate with silicone gasket and fill port, displacement blocks (1 x 1 mm, 2 mm & 5 mm & 3 x 9 mm), 20 gel separation sheets, 10 pairs of glass plates, wing nuts and cap nuts, stopcock, tubing connector, stopper and manual		55,076

21070073	Gel Casting Clamp (Model V15-17, V16, V16-2) (2 / pkg)		8,877

CAT#	Product Description	Size	Price(Rs.)
------	---------------------	------	------------

Designed for the separation of analytical and semi-preparative quantities of proteins in a single 17 x 15 cm polyacrylamide (PAGE) gel.

- Runs a single gel
- Built-in integral clamps hold the gel in place
- Fits gels of different thickness with straight or notched glass plates

The Model V15.17 Gel Electrophoresis Apparatus is a system for high-quality separation of proteins (and nucleic acids) in a vertical standard-gel format. The gel electrophoresis apparatus is supplemented by a complete selection of accessories and replacement parts, including an external gel casting system.

The Model V15.17 is designed to electrophorese a single 17 x 15 cm (W x L) vertical gel for separation of up to 20 samples on a 0.8 mm; 1.5 mm or 3 mm thick gel.

The built-in integral clamps allow easy assembly and hold gels of different thickness leak-free in place. The V15.17 is the system of choice for laboratories with low sample throughput but the need of long running distances or large sample volumes (up to 4,000 µl).

It is recommended to use Gel Casting Clamps for simple, leak-free casting of gels. This allows casting of single gels in a fraction of the time of the "conventional" tape or grease and binder clip methods.

11074010	Glass Plates (mixed pairs, 16.0 x 19.7 cm / 18.5 x 19.7 cm) (3 pairs)		7,320
11098019	Spring Clips (12 / pkg)		3,427
21105333	Stainless Steel Binder Clips (12 / pkg)		11,837

Spacer Sets (complete with 1 bottom spacer, 2 side spacers and 2 foam blocks)

41077017	0.8 mm thick		4,673
41077025	1.5 mm thick		4,673
41077033	3.0 mm thick		5,139

Combs, 0.8 mm (max. vol./well at an insertion depth of 9 mm):

11956026	10 wells (94 µl)		5,295
11956034	12 wells (72 µl)		5,295
11956042	14 wells (59 µl)		5,295
21076013	20 wells (34 µl)		5,295
11956117	preparative, wit 2 marker lanes (1.000 µl - volume of the central preparative well)		5,139

CAT#	Product Description	Size	Price(Rs.)
Combs, 1.5 mm (max. vol./well at an insertion depth of 9 mm):			
11956059	10 wells (175 µl)		5,139
11956067	12 wells (135 µl)		5,139
11956075	14 wells (110 µl)		5,139
21076021	20 wells (63 µl)		5,295
11956125	preparative, with 2 marker lanes (2.000 µl - volume of the central preparative well)		5,139
Combs, 3.0 mm (max. vol./well at an insertion depth of 9 mm):			
11956083	10 wells (350 µl)		5,139
11956091	12 wells (270 µl)		5,139
11956109	14 well (220 µl)		5,139
21076039	20 wells (126 µl)		5,295
11956133	preparative, with 2 marker lanes (4.000 µl - volume of the central preparative well)		5,139
11099025	Power Cords (EU version) (pair)		7,009
11958345	Upper Platinum Wire Replacement		7,009
11958329	Lower Platinum Wire Replacement		7,165
11958212	Wire Hardware Replacement Kit (Includes 1 red cap nut, 1 black cap nut, 2 o-rings, 2 rubber washers, 2 electrode boots and 2 hex nuts). Does not include the electrode!		1,713
21960059	Gasket Replacement for V15-17 (with 6 foam blocks)		3,114
21070057	Spacer Foam Blocks (12 / pkg)		1,868
11958378	Banana Plug Replacement Kit (Includes everything in the Wire Hardware (11958212) Replacement Kit plus 2 banana plugs, 2 long ratchet rivets, 2 short ratchet rivets, 2 thin washers & 2 thick washers)		3,582
11958352	Gel Clamp Replacement Kit (Includes spring, shoulder washer, tab, knob and support ring)		2,492
11958360	Safety Lid Replacement Kit V15-17 (Includes safety lid, 2 long ratchet rivets, 2 short ratchet rivets, 2 thin washers and 2 thick washers)		9,656
21105465	Plug Cover for Casting Clamp		1,713

Designed for the separation of analytical and semi-preparative quantities of proteins in 17 x 15 cm polyacrylamide (PAGE) gels.

- Runs 1 or 2 gels simultaneously
- Neoprene gasket provides leak-free assembly
- Fits gels of different

thickness with straight or notched glass plates
Model V16-2 Gel Electrophoresis apparatus represents a basic solid standard concept of native or SDS-PAGE vertical polyacrylamide gel (slab-gel) electrophoresis. The vertical twin-gel electrophoresis apparatus is supplemented by a complete selection of accessories and replacement parts, including an external gel casting system.
Model V16-2 is a simplified version for electrophoresis of one or two 17 x 15 cm (W x L) vertical gels simultaneously.

CAT#	Product Description	Size	Price(Rs.)
Model V16 and V16-2 - systems			
21070010	Model V16 Gel Electrophoresis Apparatus (USA version), complete with safety lid with attached power cords, 1 pair of glass plates (1 short glass plate 19.7 x 16.0 cm and 1 long glass plate 19.7 x 18.5 cm), 1 replacement gasket with 6 foam blocks, 6 spring clips and manual. Note: Spacer set and comb are sold separately as well as optional Gel Casting Clamp!		60,583
31071010	Model V16-2 Gel Electrophoresis Apparatus (USA version), complete with safety lid with attached power cords, 2 pairs of glass plates (2 short glass plates 19.7 x 16.0 cm and 2 long glass plates 19.7 x 18.5 cm), 2 replacement gaskets with 12 foam blocks, 12 spring clips and manual. Note: Spacer set and comb are sold separately as well as optional Gel Casting Clamp!		66,090

**Compact XS/S
Compact M
Compact L/XL**

Compact family products are designed for the fast separation of low to high numbers of samples in mini and standard gel formats.

- Gel size 8.2 cm x 7.1 cm (XS) or 8.2 cm x 10.5 cm (S) 12.4 cm X 14.5 cm (M), 23.9 cm X 20.0 cm & 23.9 cm X 25.0 cm.
- UV transparent gel trays
- Unique gel casting tank

Both models differ in the size of the included gel tray. The chamber compatibility with both gel trays provides great versatility to respond to different or changing application tasks. Rubber feet reliably prevent the chambers from slipping on the bench. Unique gel casting tanks make gel casting a matter of seconds.

Agarose Gel Electrophoresis Compact Series Compact-XS system

025-000	Compact XS Complete system with chamber, safety lid, UV transparent gel tray (8.2 cm x 7.1 cm), 2 combs (11 wells, 1.0 mm thick)	32,357

 <h2 style="text-align: center;">Horizon® 20.25 Systems</h2> <p style="text-align: center;">Designed for the separation of nucleic acids in submerged 20 x 25 cm agarose gels</p>			
<ul style="list-style-type: none"> Adjustable leveling feet to ensure uniform gel thickness for reproducible separation patterns Red well visualization strips aid in sample loading Removable UV-transparent gel tray aids in staining and photography <p>The Horizon® 20.25 offers integrated products for the separation of nucleic acids in agarose gel electrophoresis. The system consists of three primary components supplemented by a complete selection of accessories. The three primary components are the electrophoresis apparatus, the external gel casting system (allows to cast gels while the electrophoresis unit is being used or to cast multiple gels in advance) and the blot transfer system for capillary blotting. Horizon® 20.25 has a compact size. The UV transparent gel tray combined with the buffer recirculation option and a wide variety of different combs offer a diversified range of application. The Horizon® 20.25 Gel Casting System is a stand-alone system ranging in thickness from 3 to 10 mm.</p>			
Horizon 20.25 - systems			
21069026	Horizon 20-25 (EU version), complete system with chamber (WxLxH = 32.0x42.5x12.0cm), power cords, safety interlock lid, UV-transparent gel tray 20 x 25 cm, 2 aluminium gel casting dams, 1 x 20 tooth comb (1 mm thick), buffer recirculation option, adjustable leveling feet, bull's-eye level and manual		POR
21069067	Horizon 20-25 Gel Casting System for 20 x 25 cm gels, complete with stand-alone molded casting tray (WxLxH = 27.3x37.0x 7.5 cm), 1 UV-transparent gel tray, 2 aluminium gel casting dams, adjustable leveling feet and manual (Combs are sold separately)		34,422
11056017	Blot Transfer Apparatus 20-25, for consistent capillary transfer of 20x25 cm gels, complete with 1 buffer tray, 1 tray insert, 1 gel restrainer and manual		20,653

- Pulsed Field Gel Electrophoresis (PFGE) system**
- Rotating electrodes for truly free selection of field angles
 - Excellent separation of high molecular DNA
 - Rotaphor 6.0 Software

The patented Rotaphor®

The system features free rotating electrodes. Thus any angle can be set for the electric field. Changing field angles over the time are achieved by the precise movement of the rotor. This feature is of special importance for the separation of very large DNA molecules.

Integrated buffer circulation

The Rotaphor® system features an internal pump for efficient buffer circulation. Buffer flow from an external refrigerated circulator and internal buffer flow are completely separated. An integrated thermostat relay precisely monitors the buffer temperature and triggers if necessary the cooling circuit.

**Rotaphor
Rotaphor - system**

021-190	Rotaphor System (115V/230V). Electrophoresis chamber with electrode rotor, Gel casting system, PC with Rotaphor interface card, Rotaphor 6.0 software (installed), Power supply with PC interface, connection cables, manual. English OS	POR

Temperature Gradient Gel Electrophoresis is a powerful technique to separate DNA fragments of identical length. In contrast to conventional electrophoresis methods, molecules are separated by their melting behavior. Thus it becomes possible to separate DNA fragments according to their primary sequence. The most common application of TGGE is mutation analysis. In contrast to conventional denaturing techniques, TGGE provides quick gradient setup and reproducible separation conditions. Biometra offers two different instruments for TGGE. The smaller system, TGGE standard, provides quick optimization of new experiments and short running times for routine analysis.

**TGGE
TGGE - system**

024-201	TGGE MAXI controller		POR
024-202	TGGE MAXI elpho chamber		POR
024-203	TGGE MAXI power supply		POR

TGGE MAXI system provides a long separation distance and is thus ideally suited for analysis of complex sample mixtures. Both TGGE instruments are powered by a Peltier thermoblock with precise microprocessor control. The orientation of the buffer chambers can be quickly changed to switch from parallel to perpendicular analysis mode

perpendicular TGGE	Temperature gradient is perpendicular to the electrophoretic migration: One sample is separated over a broad temperature range to determine the optimum temperature gradient or to analyze temperature dependent changes in conformation
Parallel TGGE	Temperature gradient is parallel to electrophoretic migration: multiple samples are separated in parallel

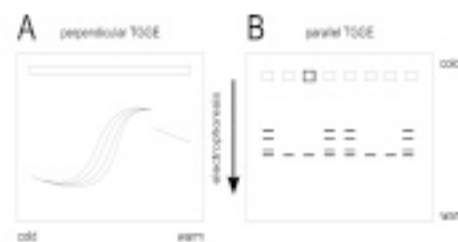

Figure : Typical results after perpendicular TGGE (A: temperature gradient from left to right) and parallel TGGE (B: temperature gradient from top to bottom).

The approved standard for manual sequencing

- Drain system for convenient and safe buffer disposal
- Integral aluminum plate for minimization of smiling effect and distorted bands
- Built-in integral clamps hold the gel in place

Optimized handling
The S2 sequencing system provides an internal drain system for safe buffer disposal. After the run a valve is opened to release the upper buffer volume to the lower buffer chamber. The lower buffer tray can then be removed for safe buffer disposal. This feature is especially valuable when radioactive samples have been separated. No smiling effect or distorted bands

The S2 sequencing apparatus features an integrated Aluminum plate to which the glass plate sandwich is directly attached. Due to the high thermal conductivity of Aluminum even temperature is distributed across the gel. In conventional systems, a higher temperature in the centre of gel lead to faster migration of bands in this area (the so called smiling effect).The system comes with all hardware components needed for gel casting.

Sequencing Model S2 - systems

CAT#	Product Description	Size	Price(Rs.)
21105036	Model S2 Sequencing Gel Electrophoresis Apparatus (EU version), Gel dimension: 31 x 38,5 cm (WxH), 0.4-mm thick gel. Complete with power cords; four 14-cm 0.4-mm vinyl sharktooth combs, set of 0.4-mm thick vinyl side spacers; pair of glass plates; roll of gel sealing tape; surface temperature monitor; and manual. 21120019	Model S2 Drain Hose Clamp Knob Replacement Kit (contains knob and 4 flat washers)		2,648
21121017	Model S2 Silicone Drain Hose		2,492
21112016	Model S2 Lower Buffer Chamber		19,157

- Adjustable to four different heights
- Internal drain system for safe buffer disposal
- Integral Aluminum plate for even heat distribution minimizes smiling effects

Height adjustable system

The Model SA Sequencing system is available with different apparatus heights. In addition, existing systems can be extended with a middle section to increase separation distance.

Optimized handling

The SA2 Sequencing Apparatus provides an internal drain system for safe buffer disposal. After the run, a valve is opened to release the upper buffer volume to the lower buffer chamber. The lower buffer tray can then be removed for safe buffer disposal. This feature is especially important when radioactive samples have been separated.

Blotting Apparatus			
Fastblot -System (for blotting of proteins)			
014-100	Fastblot B33, complete system, plasticized carbon electrodes, electrode surface 16 x 20 cm, with flow-through cooling, incl. manual		POR

CAT#	Product Description	Size	Price(Rs.)
			
<p>Proteomics blotter for rapid semi-dry blotting of proteins up to 150 KDa</p> <ul style="list-style-type: none"> ● Carbon based electrodes ● XXL sized blotter with 23.5 x 38.5 cm electrode size specially designed for the transfer of big (2D) gels ● Passive cooling <p>Electro-blotting is an important electrophoresis method to transfer proteins from polyacrylamide gels onto nitrocellulose or other membranes. Semi-dry blotting is done between two horizontal plate electrodes and offers fast as well as homogeneous transfer. In contrast to tank blotting only little transfer buffer is required and transfer times are shorter. Additionally, with semi-dry blotting discontinuous buffer systems can be used to gently blot smaller proteins or protein mixtures of very different sizes more evenly. The synthetic carbon electrodes of the Fastblot B64 are highly alkali and oxidation resistant. The electrodes can be used for higher currents (up to 2.5 mA/cm² gel for discontinuous buffer systems & up to 3.5 mA/cm² gel for continuous buffer systems) so that blotting times are reduced to 10 to 30 minutes. Large proteins (> 100 kDa) require longer transfer times. The heat that is generated by the extended transfer is removed by passive cooling (special design) of the blotting apparatus. By applying higher current, proteins with higher molecular weights can be blotted faster. Even smaller proteins can be transferred faster from thick gels and gels with small pores when blotting with high current.</p>

Fast Blot

For gentle blotting of large and temperature-sensitive proteins

- Simultaneous blotting of up to four 10 x 10 cm gels
- Integrated cooling-jacket for effective cooling
- Homogeneous buffer temperature

Electro-blotting is an important electrophoresis method to transfer mainly proteins from polyacrylamide gels on to nitrocellulose or other carrier membranes. During tank blotting proteins are transferred in a vertical buffer tank between coiled platinum wire electrodes arranged on two sides. For this technique, the gel and blotting membrane are clamped in a frame between filter paper and fiber pads.

In the Tankblot a cooling jacket is integrated into the sidewalls. This results in convective chilling by circulation: the temperature is distributed more homogeneously than with other designs ($\pm 0.5^{\circ}\text{C}$ at 6°C buffer temperature). This special design also prevents formation of ion gradients.

The Tankblot is recommended particularly for blotting of large molecules (> 100 resp. 200 kDa, depending on the proteins' composition) or of proteins which are difficult to transfer.

Tankblot - System (for blotting of proteins)

013-300	Tankblot, complete instrument with integrated cooling jacket, 1 gel cassette for up to four 10 x 10 cm gels, 2 fixation rings, 2 fiber pads and manual	POR
---------	--	-----

Tankblot - accessories

013-301	Gel cassette for up to four 10 x 10 cm gels	30,215
013-302	Fixation rings for gel cassette, 2/pkg	1,402
013-303	Fiber pads, 2/pkg	1,868

Mini V8 10 - blot module (for blotting of proteins)

21078019	Mini-V 8-10 Blot Module, complete with blot restainer, blot support frame, clamping knob, three transfer pressure pads & manual	21,181

CAT#	Product Description	Size	Price(Rs.)
------	---------------------	------	------------

Tank Blot

Designed for blotting of analytical and semi-preparative quantities of proteins and nucleic acids.

- Runs 1 or 2 gels simultaneously
- Electroblotting performed in the buffer tank of the Mini-V8.10

The Mini-V8.10 Blot Module operating in the buffer tank of the Mini-V8.10 vertical gel electrophoresis apparatus allows the blot transfer of proteins and nucleic acids from one or two 8 x 10 cm gels at a time. During blotting the apparatus can not be used for electrophoresis. Because of the tank design the system accepts most of the commercially offered 8 x 10 cm precast gels. The buffer volume of approx. 1000 ml is sufficient for cooling even at higher current.

Mini V8 10 - accessories for blot module

11958048	Transfer pressure pad, 6/pkg	3,738
B3030931	Whatman 3MM Chr, 580 x 680 mm, 0.34 mm thick, 100/pkg	51,397
B3017915	Whatman 17 Chr, 460 x 570 mm, 0.92 mm thick, 25/pkg	33,018

Vacu Blot

Vacu-Blot System comes with a vacuum pump with manometer and adjustable vacuum gauge to prevent the agarose gel from collapsing. This pump is needed since a water pump yields a vacuum that might be too high and is irregular.

Vacu-Blot - System (for blotting of nucleic acids)

053-000	Vacu-Blot System for blots up to 20x20cm, 230 V. Complete system consisting of transfer unit, 3 rubber sheets, 8 clips, membrane vacuum pump MP86 with manometer, adjustable vacuum gauge, tubing & manual 8 clips, tubing & manual	POR

053-004	Porous filter plate for Vacu-Blot		7,631
010-007	Clips (1 set), 3 pieces		935
B3030931	Whatman 3MM Chr, 580 x 680 mm, 0.34 mm thick, 100/pkg		51,397

Trouble-free Handling Guaranteed

- Innovative sealing system
- No cross-contamination
- Multichannel pipette compatible for fast sample loading
- High capacity for up to 96 samples
- Precisely adjustable vacuum (Dot Blot 96 System)

Reproducible

The Dot Blot 96 system provides easy and reproducible methods for immobilising, concentrating and binding proteins, DNA or RNA in solution onto membranes. Typical applications are Dot Blot hybridisation of plasmid DNA, small RNA and DNA fragments, cloned bacteria, lymphomas and viral nucleic acids, screening of recombinant clones, screening of cell surface antigens, as well as filtration and immobilisation of small volumes onto immobilising matrices.

Easy to use

The Dot Blot 96 works without movable O-rings, making it extremely easy to set up. Its innovative sealing system eliminates lateral leakage that can cause cross-contamination between wells. Each well is numbered and lettered compatible to the standard 96-well plate format. Multichannel pipettes for rapid handling of samples can be used.

High capacity

Up to 96 samples can be loaded in short time. The maximum sample volume is 350 µl per well.

Durable

Dot Blot 96 features a buffer tank design that eliminates the need for trapping bottles (separators), facilitates buffer recycling, and protects any vacuum pump from buffer aspiration. The use of model MP86 vacuum pump (included in the Dot Blot 96 System) is recommended as this pump offers controlled and adjustable vacuum to prevent damage of the transfer membrane.

Dot Blot - System (for blotting of nucleic acids and proteins)

053-400	Dot Blot 96 System (EU version, 230 V). complete system consisting of transfer unit, 1 sealing sheet, membrane vacuum pump MP86 with manometer, adjustable vacuum gauge, tubing and manual	POR
053-401	Dot Blot 96 without pump, incl. 1 sealing sheet, tubing and manual	POR

Hybri Slot - system (for blotting of Nucleic acids and proteins)			
21052014	Hybri-Slot 24, complete filtration manifold with vacuum (bottom) block, middle block, engraved top block, 4 tri-wing bolts & manual.		31,149

- 4 different types
- Evacuation and transfer of aggressive gases
- High vapor and condensate tolerance

All membrane vacuum pumps are gas-tight, 100 % oil-free, maintenance-free and quiet. Applications are (depending on max. pump delivery) evacuation and transfer of air, gases and vapors (e.g. Geldryers, Vacu-Blot, Dot Blot, Hybri-Slot 24, The Convertible), rotary evaporation, vacuum filtration or vacuum distillation of solvents with high boiling point.

All pumps are provided with an adjustable vacuum gauge and manometer.

For use in combination with geldryers we recommend the Pump Systems. The systems are delivered with a separator connected to the pump inlet to prevent contamination of the pump with liquids.

Membrane Pump

049-000	Membrane vacuum pump MP86 (230 V, 50 Hz) with adjustable vacuum gauge and manometer, end vacuum 100 mbar, max. delivery 6 l / min.	48,281

Compact system for 12 bit gel documentation

- Absolutely easy to use
- High quality 12 bit gel images
- Ideal for multi-user environments
- Motorised or manual zoom

Stand-alone system for absolute flexibility

A high-quality CCD video camera provides for brilliant gel images. The live image can be directly seen on a high-resolution 5,7" LCD display which is built in the darkroom. This most compact model comes with a motorised lens. The wipe-clean six-button key-pad is positioned at eye-level and offers all necessary functions as setting of integration time and save image as TIFF (12 bit), BMP or JPG file on Compact Flash card. The image files are also saved to the internal memory and can be transferred by network connection to PCs. Saturation monitoring allows the easy capture of fully quantifiable images. The compact darkhood comes with a slide-out UV transilluminator. A safety-interlocking darkroom door protects the user from UV exposure. The change of bandpass filters is easily possible with the 3-position filter-slider.

Compact solution for digital gel documentation and professional gel analysis

- High-class digital camera with 8.0 megapixels
- Powerful BioDocAnalyze (BDA) software for image acquisition and gel analysis
- Small darkhood, fits standard transilluminators
- Additional darkhoods for advanced applications

BDAdigital is a smart solution for versatile gel documentation with colour or grey-scale images. It combines a superb resolution with fully software controlled image acquisition. A live preview allows easy gel positioning. Individual camera settings can be saved in user-profiles.

The intuitive BDA analysis software allows the automatic calculation of size/molecular weight, mass or RF values in seconds. An upgrade module for similarity analysis is available.

A unique anti-theft camera protection is included with each darkhood

BDAvideo - system

035-000	BDAvideo core set. CCD video camera monochrome modified for long-time integration, resolution 752(h) x 582(w) pixels, 8 bit, 256 grey scales, zoom lens 8 - 48, close-up lens +2, UV filter for EtBr, Digitization card, BDA software for image acquisition and gel analysis. For installation on an existing computer (Minimum requirements: WinXP/2000/98/NT).		POR
035-312	BDAvideo system 20, BDAvideo core set, BDA Box 2, transilluminator UVstar 20 (20 cm x 20 cm filter size), PC, TFT, thermal printer Mitsubishi P93DW, UV converter plate		POR
035-313	BDAvideo system 30 dto., as above but with transilluminator UVstar 30 (23 cm x 30 cm filter size)		POR

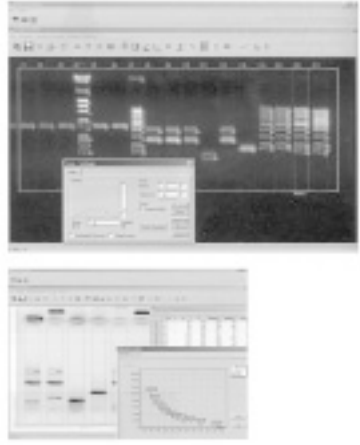

Features

- Advanced camera specifications
- Live image
- Image acquisition software with optimization tools like signal enhancement
- Modular composed system

Benefit

- Perfect performance for documentation, quantification and publication
- Exact gel positioning before exposure to UV
- Clear documentation of faint fluorescent samples for maximum results
- Available as complete plug-and-play system or in modules tailored to laboratory requirements and budget

CAT#	Product Description	Size	Price(Rs.)
BDA liveH - system			
032-001	BDA liveH core set. Digital scientific grade CCD camera mono- chrome, resolution 1,392 x 1,040 (H x V) pixels, zoom lens 8 - 48 mm, UV filter for EtBr, FireWire card (PCI), BDA image acquisition software and gel analysis software (2 licenses).		POR
032-312	BDA liveH system 20,BDA liveH core set, BDA Box 2, transilluminator UVstar 20 (20 cm x 20 cm filter size), PC, 19" TFT, thermal printer Mitsubishi P93DW, UV converter plate		POR
032-313	BDA liveH system 30,dto. same as above but with transilluminator UVstar 30 (23 cm x 30 cm filter size		POR
<p>Gel Analysis in a few Steps</p> <ul style="list-style-type: none"> • Easy gel analysis with accurate results • Included in BDA digital, BDA video, BDA live • Optional component for UVsolo, UVchemi and UVprochemi <p>The BioDocAnalyze (BDA) software is a powerful package of imaging and analysis software supporting different camera models. The software provides sample analysis with best results in a minimum amount of time. The software can be used for fluorescent, colorimetric, and chemiluminescent applications and accepts typical file formats like JPG, TIF and BMP. Gel images can be directly transferred from the image acquisition window of BDA digital, BDA video or BDA live to the analysis software window. Also files generated with other acquisition sources can be imported. The user-friendly interface provides for efficient analysis and generates precise band size calculations. Sample quantifications are done with one mouse-click</p>  <p>Features</p> <ul style="list-style-type: none"> • Automatic lane and band recognition • Add, delete and separate lanes and bands • Optimisation of detection parameters • Different choices for background adjustment • Automatic calculation for size/MW, mass, RF • Compensation of gel smiling and distortions • Zoom, insert and pseudocolour functions • Add annotations to lanes, bands and gel image • Intensity profile for each lane <p>Gel imaging - software</p>			
035-004	BioDocAnalyze (BDA) software. Software for gel analysis (fragment size, mass, RF,...) of gel images in tif, jpg, bmp, or Biometra-specific BD1 format, Software + Dongle (already included in all BDA core sets and systems)		POR
035-905	Additional licence BDA gel analysis. Serial number of the first licence dongle must be provided		POR
035-907	Additional licence BDA gel analysis (minimum order quantity: 3 x). Additional		POR

CAT#	Product Description	Size	Price(Rs.)
Versatile system for chemiluminescence, fluorescence and white light. <ul style="list-style-type: none"> • Scientific grade, high-performance 12 bit CCD camera • Automatic exposure control • Overhead UV and white light • Pull-out transilluminator • Motorized zoom lens with GLP feedback • Filter wheel for multi-application usage <p>UVIprochemi is a versatile imaging system that handles both chemiluminescent and fluorescent imaging applications with ease. The high quality, light-tight darkroom cabinet incorporates a transilluminator on a pull-out drawer, a 6-position filter wheel and a software driven motorized zoom lens. The UVIprochemi is the perfect solution for laboratories with a range of demanding imaging applications. The exceptional camera resolution of 1.3 mega-pixels allows closely spaced bands to be easily resolved while the high quantum efficiency ensures that the faintest bands can be detected and accurately quantified. The system also includes UV (254 and 365 nm) and white light epi-illumination for applications such as TLC. The filter wheel enables the use of multiple filters for more specialised fluorescent labels.</p> <p>The included image acquisition software allows the fast and easy image acquisition with self-evident buttons. Automatic exposure mode makes it possible to acquire fully optimised images of the very faintest samples at the push of a button.</p>			
Chemiluminescence systems UVIchemi			
036-000	UVIchemi. Camera Digital progressive scan 12 bit camera with grade 0 (0 defect) CCD sensor Resolution 1280 (H) x 1024 (V) pixels (pixel size 6.7 µm x 6.7 µm), 640 (H) x 512 (V) pixels in 2 x 2 binning mode (pixel size 13.4 µm x 13.4 µm) Quantum efficiency 70 % at 450 nm Cooling 45 °C below ambient or absolute -20 °C -Fixed focal length manual lens (f/0.95) Darkroom has Separate compartments for camera and sample for optimal cooling results ,Ultra-tight design and door latches,Set of 4 LED lights for epi-illumination (intensity controllable),With six-position adjustable tray system,Maximum sample size 21 cm x 18 cm		POR
036-911	PC Intel Pentium, for UVIchemi. English OS (Windows XP professional), incl. Installation (FireWire card, software)		POR

036-913	PC Intel Pentium, for UVIprochemi. English OS (Windows XP professional), incl. Installation (FireWire card, software)		POR
General laboratory equipment Hybridization oven - systems			
052-000	OV1 Mini hybridization oven (230 V). Including 4 large hybridization bottles (30cm), 5 Nylon meshes, user manual		POR
052-100	OV2 Mini hybridization oven (230 V). Including 4 large hybridization bottles (30cm), 5 Nylon meshes, user manual		POR

CAT#	Product Description	Size	Price(Rs.)
------	---------------------	------	------------

- Advanced ventilation system for homogeneous temperature distribution
- Speed adjustable rotor for optimum hybridization conditions
- Holds up to 12 hybridization bottles

Advanced heating technology

The Mini oven OV1 features an advanced ventilation system that ensures even temperature distribution within the oven chamber. Temperature is precisely controlled in a range from 10°C above room temperature to a maximum of 85°C. A platinum sensor recognizes temperature deviations bigger than 0.1°C and directly triggers the heating system.

Versatile application

The rotor speed can be set between 6 and 10 rotations per minute, allowing precise control of hybridization conditions. A maximum of 12 hybridization bottles (10 or 15cm length) can be incubated. Alternatively, 6 large bottles (30cm) can be incubated at the same time. Thanks to very gentle rotation, even in the large bottles only minimum hybridization solution is required (down to a few ml).

052-200	OV3 Mini shaking oven (230 V). Including 4 large hybridization bottles (30cm), 5 Nylon meshes, user manual	POR
052-300	OV5 DUO-therm hybridization oven (230 V). Including 4 large hybridization bottles (30cm), 5 Nylon meshes, user manual	POR

Hybridization oven - accessories

For gel staining and destaining, membrane incubation etc.

- 5 or 10 kg load capacity
- 26 x 29 cm or 35 x 40 cm platform surface
- Quiet operation

Biometra's Rocking Platforms feature rock-solid construction. The instruments are ideal for applications in which gentle flow of solution is required.

With shaking angles of 5 or 10° and variable shaking frequency they can be used in a multitude of applications. Both models can support a generous weight load and are designed for years of reliable service under the most demanding conditions. Whereas the two rocking platforms WT15 and WT16 move back and forth, the two tumbling tables WT12 and WT17 move three-dimensionally.

Gel drying systems

- 3 different sizes from 18 x18 cm up to 40 x 60 cm drying surface
 - Ideal for mini gels up to sequencing gels
 - Operating temperature: RT+5°C – 90°C
- Biometra's Geldryers, highly appreciated for their durability, very quiet operation and reliability, are for drying vertical slab gels and provide optimal drying for all types of gels.**

CAT#	Product Description	Size	Price(Rs.)
<p>The dryers Minidry, Mididry and Maxidry feature temperature regulation between ambient temperature +5°C and 90°C. The gels are heated from below and the vacuum removes the moisture from below to dry the gel homogeneously. When applying the vacuum by a membrane vacuum pump a groove that frames the drying surface provides an optimum tight seal during the drying period. All gel dryers are equipped with a timer to allow time controlled drying. The use of special filter paper and cellophane results in perfect flat and transparent gels after drying for gel documentation and analysis (e.g. with the BioDoc systems).</p>

Vacuum pumps for laboratory use

- 4 different types
- Evacuation and transfer of aggressive gases
- High vapor and condensate tolerance

All membrane vacuum pumps are gas-tight, 100 % oil-free, maintenance-free and quiet. Applications are (depending on max. pump delivery) evacuation and transfer of air, gases and vapors (e.g. Geldryers, Vacu-Blot, Dot Blot, Hybri-Slot 24, The Convertible), rotary evaporation, vacuum filtration or vacuum distillation of solvents with high boiling point.

All pumps are provided with an adjustable vacuum gauge and manometer

Membrane pumps

049-000	Membrane vacuum pump MP86 with adjustable vacuum gauge & manometer, end vacuum 100 mbar, max. delivery 6 l/min, 230 V, 50 Hz		48,281
049-100	Membrane vacuum pump MP26 with adjustable vacuum gauge & manometer, end vacuum 35 mbar, max. delivery 19 l/min, 230 V, 50 Hz, incl. 1 m vacuum tubing		POR
049-200	Membrane pump system I, same as 049-100, but includes separator (Woulff's bottle), incl. 1 m vacuum tubing		POR

CAT#	Product Description	Size	Price(Rs.)
049-300	Membrane vacuum pump MP20 with adjustable vacuum gauge & manometer, end vacuum 8 mbar, max. delivery 20 l/min, 230 V, 50 Hz, incl. 1 m vacuum tubing		POR
049-400	Membrane pump system II, same as		POR
049-300	incl. separator, baseplate and holder for separator, incl. 1 m vacuum tubing		POR
049-401	Baseplate and holder (for separator) for MP20		27,411
049-402	Separator for MP20 and MP40		28,969
049-500	Membrane vacuum pump MP40 with adjustable vacuum gauge and manometer, end vacuum 8 mbar, max. delivery 34 l/min,		POR

230 V, 50 Hz incl. 1 m vacuum tubing

049-600	Membrane pump system III, same as		POR
049-500,	incl. separator, baseplate and holder for separator, incl. 1 m vacuum tubing		
049-601	Baseplate and holder (for separator) for MP40		27,411
049-402	Separator for MP20 and MP40		28,969

Covering a wide range of temperature control applications

- Space-saving design
- Microprocessor Controlled
- CFC free

Precise and constant temperature often is essential for a wide range of laboratory methods, e.g. Pulsed Field gel electrophoresis with the Rotaphor, native polyacrylamide gel electrophoresis (slabgels), agarose gel electrophoresis

(Agarose gel systems), isoelectric focusing (2D gel electrophoresis) or DNA-sequencing (DNA-sequencer).

The KH-5 is menu driven, microprocessor controlled and equipped with genuine digital electronics. The compact design is a result of modern SMD technology. The Real Temperature Adjustment system allows corrections between the actual temperature displayed and the temperature in an external system by an correction value "C".

The powerful pump (max. flow rate 12 l / min.) ensures an excellent temperature uniformity throughout the bath and an efficient heat exchange with external objects. Thus, a high degree of temperature accuracy is attainable.

Refrigerated Circulator

043-400	Refrigerated Circulator KH-5 (230 V), complete system with 2 m long perbunan hoses (8 mm inner diameter), adapters and manual		POR

Full range of low voltage and high voltage Power Supplies suitable for all electrophoresis applications.

- **Low Voltage: from max. 125 V up to 600 V**
- **High Voltage: up to 3,000 V**
- **Optional temperature probe**

Biometra offers a full range of power supplies for protein, DNA and RNA electrophoresis including blotting, DNA sequencing, fingerprinting techniques and isoelectric focusing.

Power Supplies

Low voltage power supplies

31061104	Model 125 Power Supply (EU version, 230 V), max. 125 V, 150 mA, 20 W, 1 output		24,919
10801017	Model PS304 Power Supply (EU version, 230 V), max. 300 V, 400 mA, 120 W, 2 outputs		POR
10839017	Model PS305T Power Supply (EU version, 230 V), max. 300 V, 500 mA, 150 W, Timer, 2 outputs		POR
040-800	Standard Power Pack P25 (115V / 230V), max. 400 V, 1000 mA, 200 W, 4 outputs		POR
040-850	Standard Power Pack P25T with Timer (115 V / 230 V), max. 400 V, 1000 mA, 200 W, 4 outputs		POR

CAT#	Product Description	Size	Price(Rs.)

High Voltage Power Supply for DNA-Sequencing, Polyacrylamide Gel Electrophoresis and Isoelectric Focusing

- **Programmable**
- **Const. voltage, current or power**
- **Temperature Probe**

High voltage power supplies

10553003	Model PS3003 HV Power Supply (EU version, 230 V), max. 3000 V, 300 mA, 300 W		POR
10556017	Model PS9009TC programmable HV Power Supply (EU version, 230 V), with one dedicated program especially designed for IEF max. 3000 V, 300 mA, 300 W, Timer, 2 outputs		POR

Power supply adaptors

010-026	Standard safety adaptor set (4mm/4mm), conical, for use with sheathed 4 mm male plug instrument leads to non-sheathed 4 mm Power Supply output jacks		2,959
010-027	Safety adaptor set (4 mm / 4 mm), cylindrical, for use with sheathed 4 mm male plug instrument leads to non-sheathed 4 mm Power Supply output jacks		2,959
022-007	Safety adaptor set (4 mm / 2 mm), for use with sheathed 4 mm male plug instrument leads to 2 mm high-voltage Power Supply output jacks		5,607
022-018	Safety adaptor set (2 mm / 4 mm), for use with sheathed 2 mm male plug instrument leads to sheathed 4 mm Power Supply output jacks		6,230
010-031	Safety adaptor (4 mm / 4 mm), special, for use with sheathed 4 mm male plug instrument leads to recessed 4 mm Bio-Rad Power Supply output jacks		5,763

Overcome gel-electrophoresis bottlenecks

The QIAxcel system consist of the QIAxcel analyzer, a novel multiplexed fluorescence detection design including an array of light-emitting diodes and micro-optical collectors, the QIAxcel Gel Cartridges, the BioCalculator software, and a computer. The ready-to-run gel cartridges contain 12 separation micro-channels with a built-in gel matrix for fast, high-resolution analysis of up to 96 samples in parallel. Hands-free sample loading and self-contained components minimize exposure to hazardous chemicals such as ethidium bromide. The high detection sensitivity provided by the QIAxcel analyzer enables robust results even with low concentrations of nucleic acid. With a resolution of 3-5 bp for fragments smaller than 0.5 kb, the QIAxcel analyzer ensures greater accuracy than slab-gel methods as well as greater confidence in data interpretation. Sample consumption is 1 µl per analysis, saving on your precious sample for further downstream analysis.

QIAxcel System

Revolutionary Multi-Capillary Electrophoresis System - A perfect match for genomic research

- ◆ **Automated sample Handling for up to 96 Samples** Hands free sample loading
Reduces training and labor costs / Manual handling errors
Increases laboratory productivity
- ◆ **High Detection Sensitivity** Detects as low as 0.1ng/µl for PCR amplified DNA
More robust results with lower concentrations of DNA
- ◆ **Fast Analysis**
Averages 3-10 minutes for a 12-samples analysis
Completes 96-sample analysis within 0.5-1.3 hours
Increases laboratory productivity
- ◆ **Compact Instrument Size** Fits on most laboratory benches
Conserves bench space

A versatile solution for your electrophoresis

The QIAxcel system offers a broad range of optimized applications and is highly suited for research in academic as well as pharmaceutical, biotechnology, and biomedical laboratories. Preprogrammed methods, in combination with the corresponding gel cartridges, allow separation and analysis of a variety of nucleic acids, including single or multiple PCR fragments, DNA digested with restriction endonucleases, synthesized oligonucleotides, total RNA, and cRNA.

Quantitative PCR

Stratagene offers you the complete QPCR system solution with high-performance, value loaded products and services to support your QPCR research. Whether a novice or experienced use, our goal is to ensure that you are running QPCR experiments quickly, efficiently, and affordably. Our Mx™ family of QPCR Systems, premiere QPCR System Service Program, complete line of QPCR and QRT-PCR reagents, and Fast Track QPCR Education Program is the total package for your QPCR research.

Bringing QPCR Systems to Every Lab

Real-time quantitative PCR (QPCR) is today's method of choice for quantifying nucleic acids. By monitoring PCR amplification in real-time, it is possible to measure the reaction during the exponential phase of growth, a time when none of the reagents are limiting and the reaction is most efficient. This allows real-time QPCR to achieve more sensitive detection, better reproducibility, and a wider linear dynamic range than conventional methods. Our Mx 3000P and Mx 3005P QPCR Systems offer the highest performance and flexibility in QPCR instrumentation at an affordable price.

QPCR System The Mx3005P®

System is a high-performance, full-featured instrument system designed to accommodate basic experimental design and also offer the flexibility required for more advanced applications. The Mx3005P QPCR System brings real-time QPCR instrumentation to the individual researcher with a limited budget.

- ◆ **Fine optical channels with user-selected filters for greater flexibility.**
- ◆ **Broad wavelength range excitation supports most fluorescent dyes.**
- ◆ **Defined excitation and emission detection wavelengths ideal for superior multiplex results.**
- ◆ **Single photomultiplier tube for detection ensures superior sensitivity and linear dynamic range to ten orders of magnitude.**
- ◆ **Each well scanning optics reduces the use of any reference dye and hence making the platform open. Open to all available Real Time PCR chemistries**

Total QPCR Solutions

Stratagene provides a total solution approach to real-time quantitative PCR (QPCR), simplifying the challenges you face in sample preparation and data analysis. Whether you are new to or experienced in QPCR, your individual needs are met with our comprehensive range of products and industry-leading support. Those getting started in QPCR benefit from our on-site user group meetings and web-based training programs, premixed reagent kits, and turnkey instrument installation. More experienced QPCR users appreciate the flexibility of our powerful, user-friendly software as well as reagent kits that support user customization and demanding assay optimization.

QIASymphony® SP - Pure Performance

Fully automated sample and assay technologies

By combining performance-leading QIAGEN® magnetic-particle chemistry with a broad application range for RNA, DNA, and protein purification, the QIASymphony SP sets a new milestone in automated sample technologies. Cutting-edge technology, innovative functions, and optimized protocols, plus processing of large sample volumes* give you high-performance results you can trust. The QIASymphony SP is the first module in the new QIASymphony series of automated systems, which provides automation of your complete workflow — from sample to assay.†

The QIASymphony SP enables your success in:

- Molecular diagnostics research and biomedical research
- Human identity testing, veterinary applications, and biosecurity research
- Life science applications, such as genomics and proteomics research

The QIASymphony SP takes ease of use to a new level

The QIASymphony SP is ready-to-run and requires only minimal installation, enabling fast startup in your laboratory. The QIASymphony SP is operated via an integrated touchscreen, and up to 96 samples, reagents, and plasticware are loaded into drawers, providing increased ease of use and user safety. Innovative reagent cartridges enable processing of a wide range of starting materials with just a few kits. Bar code reading throughout the entire purification procedure enables full process documentation.

Unrivaled application range

QIASymphony Kits — backed by QIAGEN Quality™ — increase laboratory efficiency since just a few kits in combination with optimized protocols cover an extensive range of starting materials and applications. Sample volumes of up to 1000 µl and up to 50 mg of tissue or 10⁷ cells can be processed, providing increased nucleic acid yields for gene expression and genomics applications and higher sensitivity in virology and microbiology applications. The QIASymphony SP delivers pure performance in virus and bacteria applications and makes no compromise when purifying DNA from blood, RNA from tissues and cells, or proteins from E. coli or eukaryotic cells.

Innovative kit concept for ease-of-use and improved efficiency

QIASymphony Kits are exceptionally easy to use. Innovative, ready-to-run reagent cartridges are prefilled with all reagents required for the purification procedure, including accessory enzymes. Worktable setup is rapid, which saves your valuable time. Simply place up to 2 reagent cartridges in the QIASymphony drawer. The reagent cartridges can be either from the same kit or from different kits, enabling different purification procedures to be performed within the same run of 96 samples. Reagent cartridges are automatically opened by the instrument and reagent volumes only for the selected number of samples are used, giving you complete cost control.

QIASymphony reagent cartridges are safe and fully trackable

QIASymphony reagent cartridges enable increased process safety and eliminate tedious manual documentation. Prefilled, sealed reagent cartridges eliminate pouring of reagents. Reagent cartridges, including accessory enzymes, are labeled with 2D bar codes, enabling automatic recognition by the QIASymphony SP and tracking of individual reagents throughout the entire purification procedure. Used reagent lots for each batch of samples are documented in the final result file.

biometra ECO-LINE

Newer Introduction

- Glass plates with fixed glass spacers
- Multiple glass plate sizes compatible
- Tank style model for electrophoresis and blotting
- Built-in cooling option Gel casting system for single or multiple gel casting

Both sizes of the tank-style Eco-line accommodate a variety of separation techniques, including SDS-PAGE, native, preparative and gradient electrophoresis, as well as blotting applications. Eco-Mini and Eco-Maxi have the capacity to run 1 or 2 gels simultaneously.

The gel module for electrophoresis fits to the casting stand and forms the upper buffer chamber with integrated clamps when applied into the buffer tank. Interchangeable modules convert the apparatus from electrophoresis to tank blotting. Locator slots are built into the tank endwalls for easy and quick sliding of the gel electrophoresis or blotting module into locked position.

Optional cooling is available to prevent overheating and to ensure the highest resolution. Both systems offer the option to use a cooling coil fixed to the lid for temperature controlled runs. Additionally the buffer tank of Eco-Mini and Eco-Maxi is available with a built-in cooling base.

Eco-Mini - PAGE electrophoresis & blotting.

Double gel system with gel dimensions of 9.2cm X 7.8cm. Accommodates hand cast & pre cast gels. Gel casting stand for 1 or 2 gels. Cooling option (cooling coil for lid, buffer tank with built-in cooling base). Is also compatible with glass plates of minigel or minigel -twin. Temp controlled runs are possible using the cooling coil. Buffer tank version with built-in cooling base is compatible with the blot module of Tank Blot Eco-Mini. Casting stand provides quick & easy assembly of 1or2 gel sandwiches. Specially designed PRE CAST GEL MODULE is recommended for use of pre-cast gels in plastic cassettes.

Eco-Maxi - PAGE electrophoresis

Double gel system with gel dimensions of 19cm X 17.5cm. Accommodates hand cast & pre cast gels. Multi casting chamber for casting 2-4 gels simultaneously achieves highest reproducibility. Cooling is possible by using the cooling coil for lid, buffer tank with built-in cooling base. The general risk of "smiling effects" and insufficient band resolution with large gels caused by heating effects can be easily overcome by using this cooling option. Buffer tank version with built-in cooling base is compatible with the blot module of Tank Blot Eco-Maxi. Acrylic displacement blocks act as space filters when less than 4 gels are cast. Special separation sheets ensure an easy separation of gels after polymerisation.
