

# Leadconn MiroDesk

## Installation Guide and User's Manual

### I. Installing Mirodesk

1. Hardware requirements
  1. Pentium 233 MHZ PC or above.
  2. USB2.0 port.
  3. Network Adapter.
2. Content
  1. MiroDesk installer software.
3. Steps of installation
  1. Please login your windows system with an administrator privilege firstly. Then plug the MiroDesk USB pen-drive to the PC. It will open a start program "pen-menu.exe" automatically. The menu is shown as below.

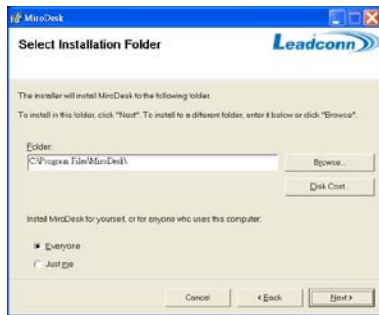

If the AutoRun function is not available, you can also execute MiroDesk\pen-menu.exe to open this menu.

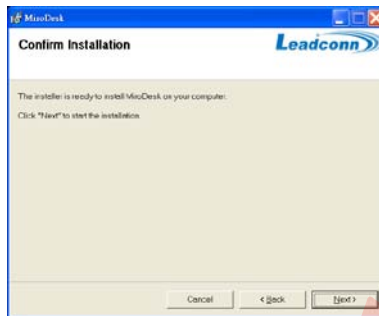

2. Click "Install/安裝 MiroDesk" button to open the MiroDesk installer.

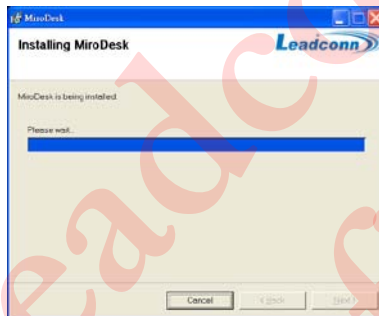

Select the directory to be installed to.

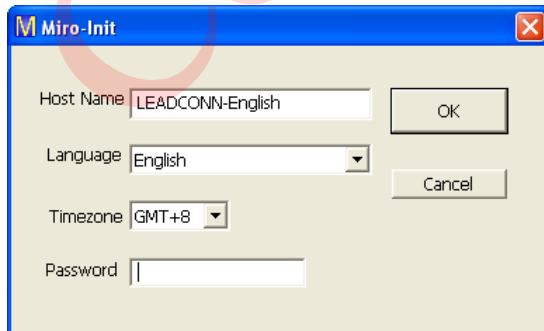

After the installing directory is selected, presses Next to continuous install.

Copy the source files to the installing directory.

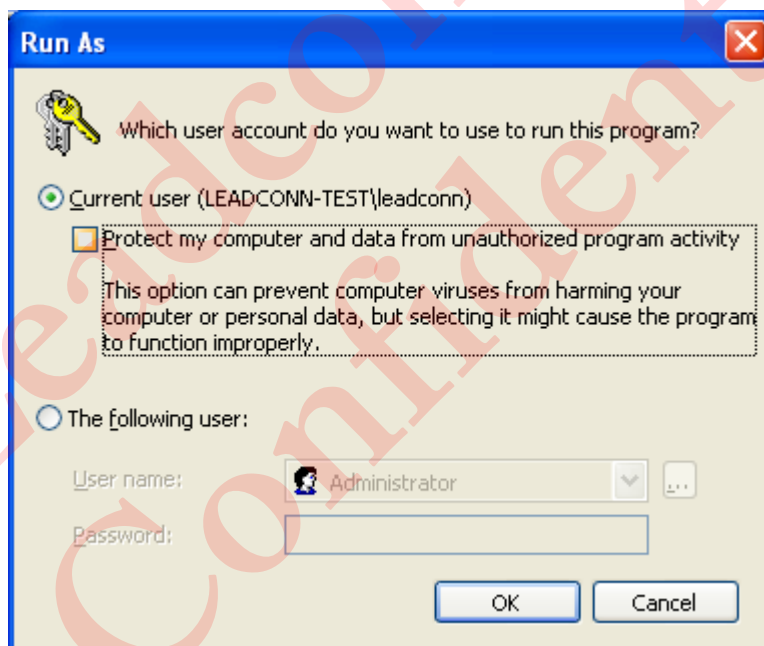

Set the hostname that used on the miroviewer's menu. (The default is the name of the PC). Then choose the language, the time zone of the host and the password to login this MiroDesk server. When finished, press OK to continue.

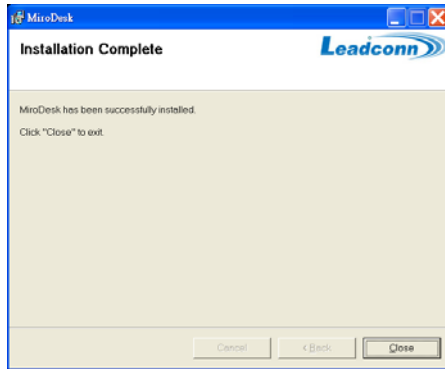

During the install process, a window named "Window Security Alter" pops up. Please click **Unblock**; otherwise the MiroSvr will fail.

For Windows XP user, please **uncheck** the item **“Protect my computer and data from unauthorized program activity”**. The MiroSvr needs this privilege.

Press “Close” to finish the installation.

A MiroDesk agent Icon will be displayed on the taskbar. And the shortcuts of MiroSrv and MiroDisp are also created.

3. You can use the MiroDisp program to connect to a desired remote desktop.

## II. User Manual

Host side:

Please install MiroSvr on the PC to be controlled.

Client side:

Open the viewer mirodisp

Plug in the MiroDesk pen drive. A start menu will pop up.

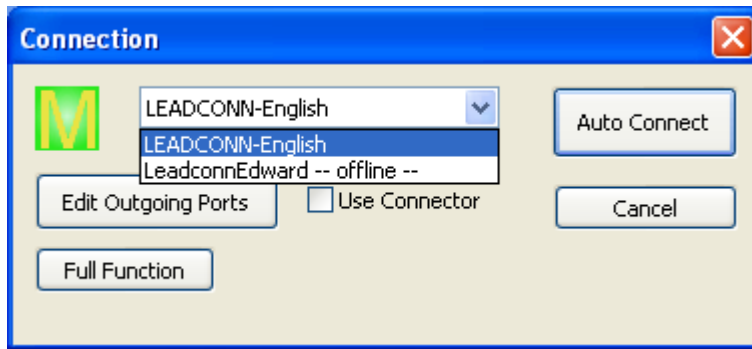

Please click “MiroDisp Connect/連線” to open the mirodisp viewer.

If the menu doesn't popup automatically, the autorun function may be disabled or blocked by anti-virus software. You can also execute MiroDesk\mirodisp.exe to open the mirodisp viewer.

1. Select the remote host to connect:

The Connection dialog will display a host list which the pen drive has been installed or registered to. The '—offline' means the PC is down or 'mirosrv'

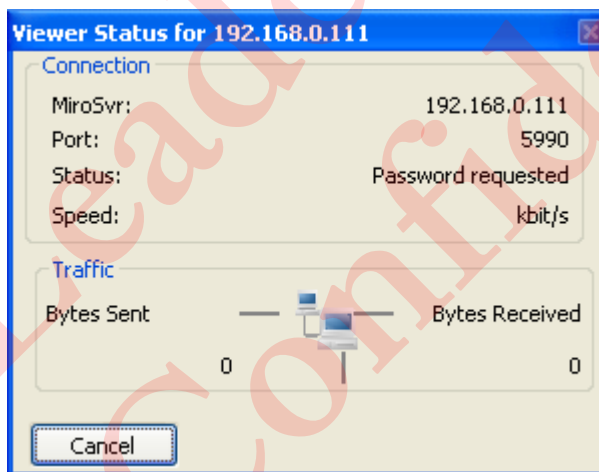

is not executed. Select a remote host name and click 'Auto Connect'.

2. Enter the login password of this host:

The status window displays the status of the current connection.

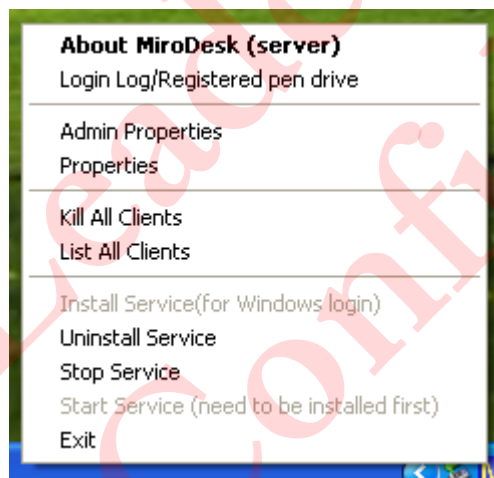

3. Connection established:  
After the connection is established, user can control the remote host.

Other properties :
