- **DO NOT** tow behind any motorized vehicle on land, snow, or water. **THIS IS NOT A TOW-ABLE DEVICE!**
- **USE COMMON SENSE AND GOOD JUDGEMENT WHILE HAVING FUN!**
- **DO NOT DISCARD THIS OWNER'S MANUAL.**

## INFLATION:

Proper inflation is the key to the optimum performance of this product. The tube is designed to fit snugly inside the cover if there is one, and there should be very few wrinkles in the cover or tube when the it is properly inflated.

Your Sportsstuff snow tube is equipped with one or more of the following valves:

**A) Safety Valve & B) Oversized Safety Valve** - Both valves operate in the same manor, with size being the only difference. The larger opening of the Oversized Safety Valve allows for faster inflation/deflation. Affix the end of your inflator hose into the opening in valve. Make sure you open the flap inside the opening and inflate until firm. A small plastic straw is included with tubes using this valve. This straw may temporarily be inserted in the valve to keep the flap open while inflating and deflating.

**C) Raised Speed Valve** - for use with standard electric pump, shop vac, wet vac, leaf blowers, vacuum with a 2-way switch for fast inflation / deflation. An air compressor adapter is available directly from Sportsstuff at [www.sportsstuff.com](http://www.sportsstuff.com) or 888-814-8833.

**D) Recessed Speed Valve** - for use with standard electric pumps, shop vac, wet vac, leaf blowers, vacuum with a 2-way switch for fast inflation/deflation. An air compressor adapter is available directly from Sportsstuff at [www.sportsstuff.com](http://www.sportsstuff.com) or 888-814-8833.

**E) Recessed Multi Valve** - has a built-in air compressor adapter, for use with standard electric pumps, shop vac, wet vac, leaf blowers, vacuum with a 2-way switch or an air compressor for fast inflation/deflation.

**F) EZ Lock Valve** - Sits flush with the tube bladder, with locking lid. for use with standard electric pumps, shop vac, wet vac, leaf blowers, or any vacuum with a 2-way switch for fast inflation/deflation.

**G) Speed Safety Valve** - A hybrid valve utilizing the best of both the Oversized Safety Valve and the Speed Valve. Pulls out for fast inflation/deflation, then can be pushed in flush with the tube. For use with standard electric pumps, shop vac, wet vac, leaf blowers, and vacuums with a 2-way switch for fast inflation/deflation.

Secure the valve by firmly fastening the bottom portion of the valve into the base. To inflate, open cap or top portion of the valve. Using the hose from your inflator, inflate through the top opening of the valve

## MAINTENANCE:

Sportsstuff snow tubes are made primarily of PVC (Poly-Vinyl-Chloride), an extremely tough, durable material. Some items also have a nylon cover. Our designed features and components are capable of withstanding impact by normal use in most snow conditions. Using your snow tube in conditions such as incomplete snow cover, or riding over rocks and ice may cause injury and damage to the rider as well as the snow tube. Proper inflation assures an excellent ride and a longer life for your snow tube. Prolonged use in the sun may cause the brilliant colors to fade. Bright colored nylon covers may also bleed when initially wet. Keep the tube clean and store it dry. Clean your snow tube with mild soap and water. Store your snow tube deflated in a cool, dry area out of direct sunlight.
