

# AcuConnect™2.0

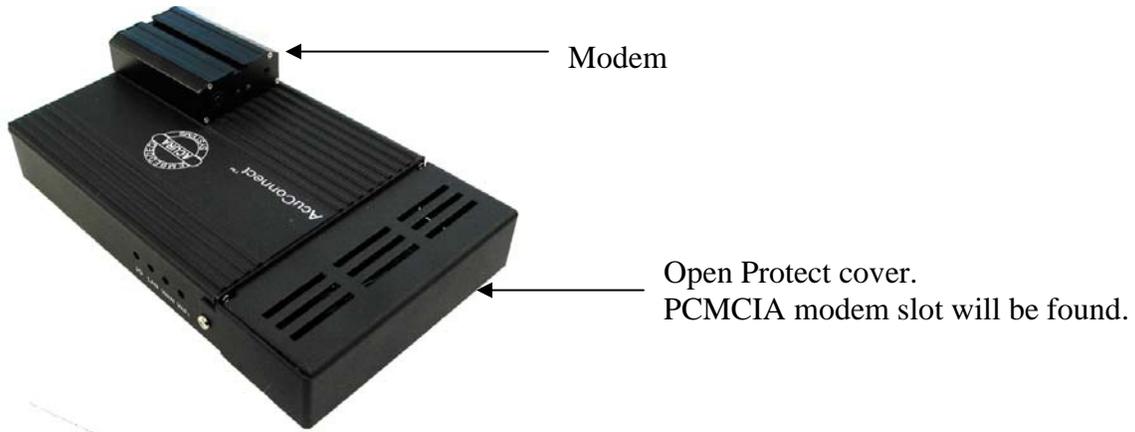

## 3G Wireless WAN Mobile Broadband Modem + Router User Manual

### 1.1. Establish WiFi Connection

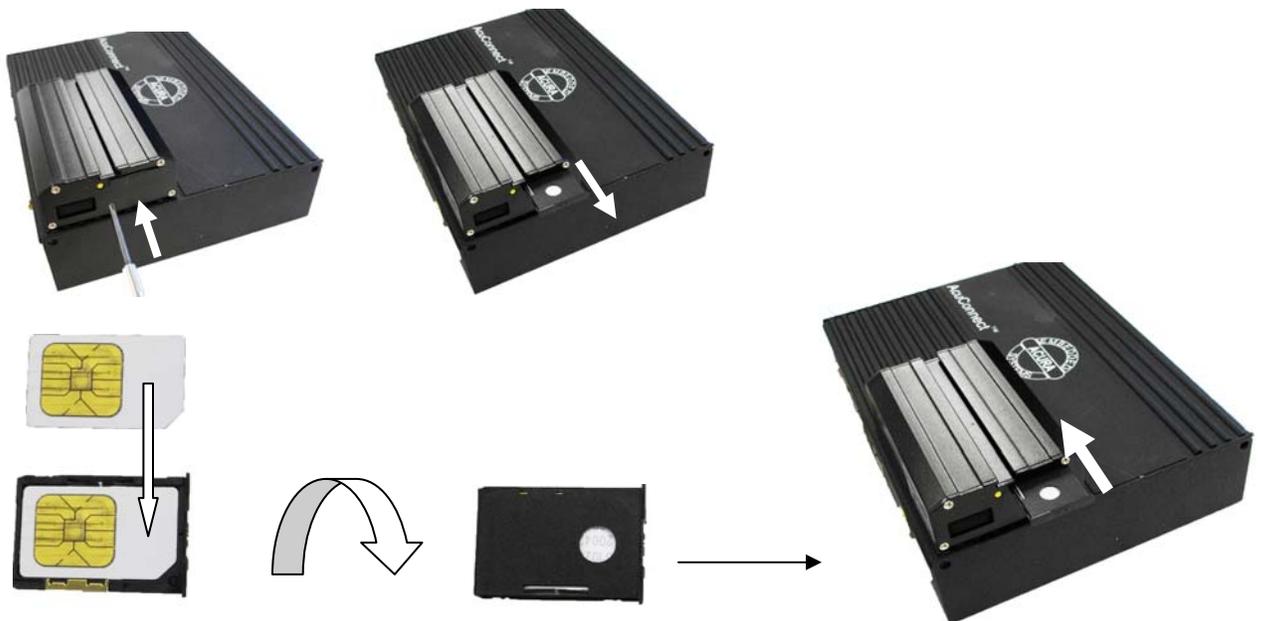

If you selected either **WEP** or **WPA-PSK** encryption, ensure these settings match your WiFi adapter settings.

WiFi and encryption settings must match for access to the Wireless WAN Mobile Broadband modem and Router Configuration Menu, and the Internet. Please refer to your WiFi adapter documentation for additional information.

In general, for connecting with internet, plug **SIM card** in the modem slot as follow.

press yellow button on the modem and **Sim** Card holder will pop out.

## 1.2. Using the Configuration Menu

Once properly configured, the Wireless WAN Mobile Broadband Router will obtain and assign IP address information automatically. Configuration settings can be established through the Wireless WAN Mobile Broadband Router Configuration Menu. You can access this interface by performing the steps listed below:

1. Open a web-browser.
2. Type in the **IP Address** (<http://192.168.123.254>) of the Wireless WAN Mobile Broadband Router
3. Type “admin” in the Password field.

**Note:** If you have changed the **default** IP Address assigned to the Wireless WAN Mobile Broadband Router, ensure you enter the correct IP Address now.

**USER's MAIN MENU**    > **Status**

**System Password :**  (default: admin)

Error	0	0

**Display time: Tue Oct 2 00:41:01 2007**

Type "admin" in the Password field. Then, Click "logon" button.

### 1.2.1. Wizard setting

- Press “**Wizard**” button -  for basic settings with simpler way. (Please check section 2.2.1)
- Or you may click on “**Advanced Setup**” -  for advanced settings. (Please check each item from section 2.2.2)

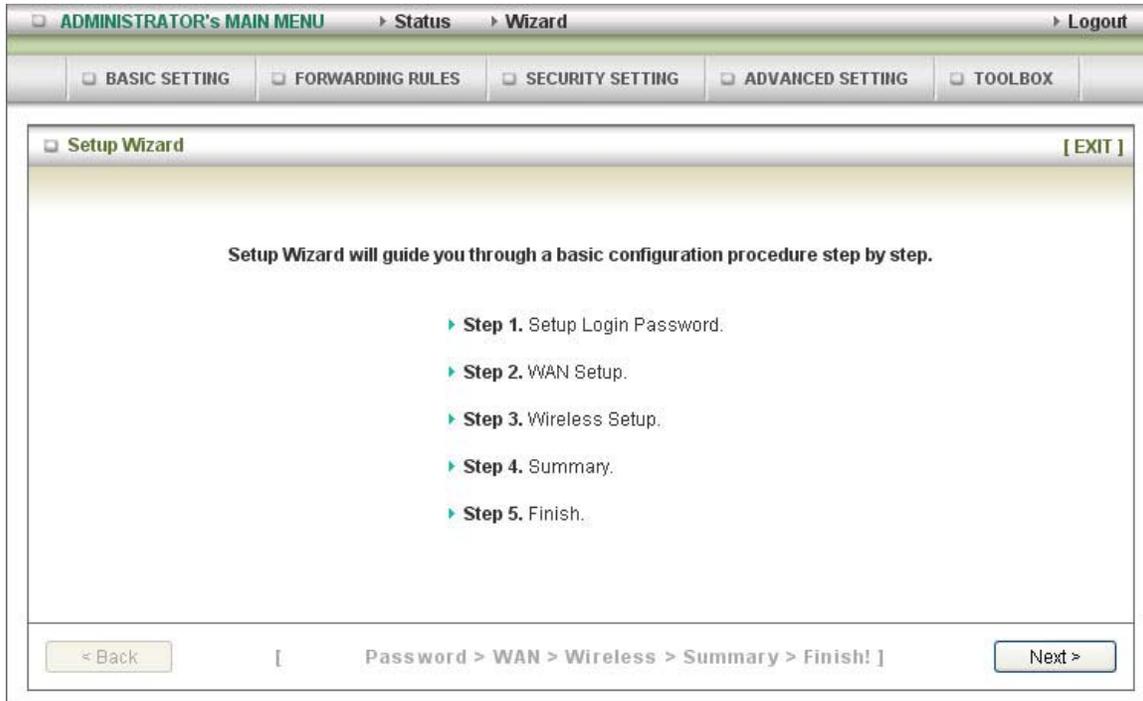

- **Click on “Enter” button to get start.**

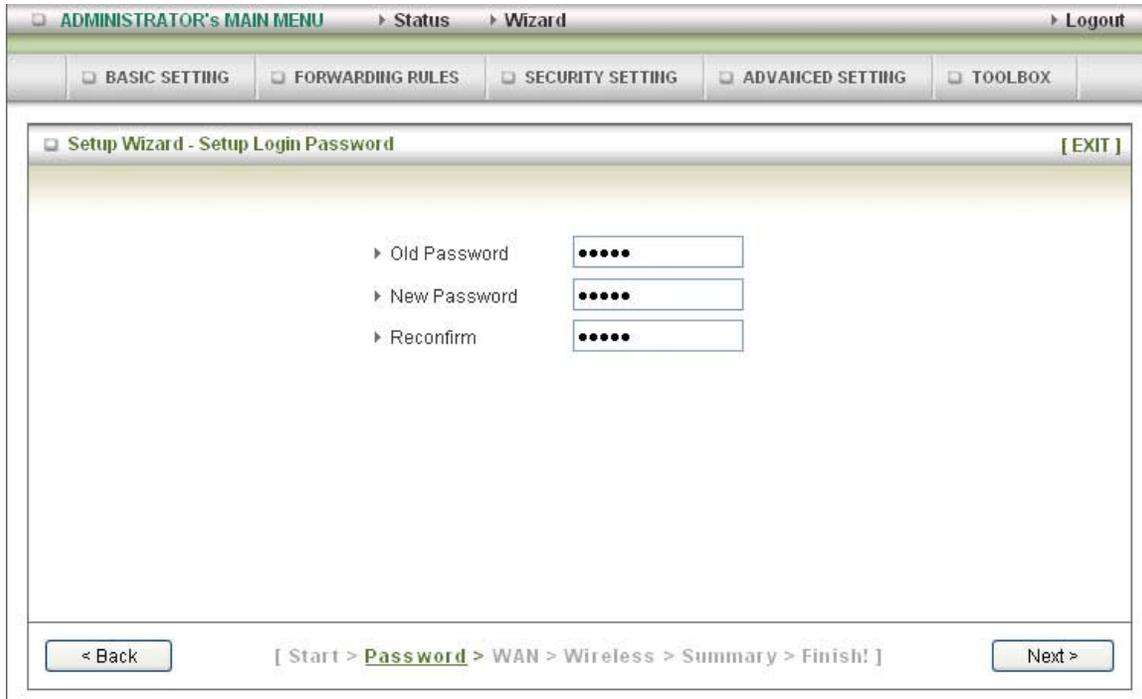

With wizard setting steps, you could configure the router in a very simple way. This configuration wizard includes settings of

- a. **Login Password,**
- b. **WAN Setup**
- c. **Wireless Setup,**

Press “**Next**” button to start configuration.

**Step 1: Allow you to change the system password.**

You can change Password here.

It is recommended that you change the system the basis of security

1. Key in your Old Password (if it is the first initiation, the “ admin” will be the defaulted one.
- 2: Enter your New Password
- 3: Enter your Password again for confirmation; it must be the same as the New Password.
4. Then click on “Next” to get into next installation.

## Step 2 : Select WAN Types will be used for Internet connection

ADMINISTRATOR'S MAIN MENU    ▶ Status    ▶ Wizard    ▶ Logout

BASIC SETTING    FORWARDING RULES    SECURITY SETTING    ADVANCED SETTING    TOOLBOX

Setup Wizard - Please select the type of WAN connection that you want to use [ EXIT ]

3G card  
 iBurst card  
 WAN Ethernet port

< Back    [ Start > Password > **WAN** > Wireless > Summary > Finish! ]    Next >

To setup 3G card please see page 36

ADMINISTRATOR'S MAIN MENU    ▶ Status    ▶ Wizard    ▶ Logout

BASIC SETTING    FORWARDING RULES    SECURITY SETTING    ADVANCED SETTING    TOOLBOX

Setup Wizard - Select WAN Type [ EXIT ]

ISP assigns you a static IP address. (Static IP Address)  
 Obtain an IP address from ISP automatically. (Dynamic IP Address)  
 Dynamic IP Address with Road Runner Session Management. (e.g. Telstra BigPond)  
 Some ISPs require the use of PPPoE to connect to their services. (PPP over Ethernet)  
 Some ISPs require the use of PPTP to connect to their services.  
 Some ISPs require the use of L2TP to connect to their services.

< Back    [ Start > Password > **WAN** > Wireless > Summary > Finish! ]    Next >

Pick up one of type you preferred to.

Click on “Next” button

### Step 3: Configure the LAN IP Address, Host Name and Wan MAC Address

The screenshot displays the 'Setup Wizard - WAN Settings - Dynamic IP Address' configuration window. At the top, there is a navigation bar with 'ADMINISTRATOR'S MAIN MENU', 'Status', 'Wizard', and 'Logout'. Below this is a menu bar with 'BASIC SETTING', 'FORWARDING RULES', 'SECURITY SETTING', 'ADVANCED SETTING', and 'TOOLBOX'. The main content area has a title bar 'Setup Wizard - WAN Settings - Dynamic IP Address' and an '[EXIT]' button. The configuration fields are as follows:

- LAN IP Address: 192.168.123.254
- Host Name: ROUTER (optional)
- WAN's MAC Address: 00-00-00-00-00-00

Buttons for 'Save' and 'Clone MAC' are located to the right of the MAC address field. At the bottom, there is a '< Back' button, a breadcrumb trail '[ Start > Password > **WAN** > Wireless > Summary > Finish! ]', and a 'Next >' button.

LAN is short for Local Area Network, and is considered your internal network. These are the IP settings of the LAN interface for the Wireless WAN Mobile Broadband Router, and they may be referred to as Private settings. You may change the LAN IP address if needed. The LAN IP address is private to your internal network and cannot be seen on the Internet.

**Note:** There are 254 addresses available on the Wireless WAN Mobile Broadband Router when using a 255.255.255.0 (Class C) subnet. Example: The router's IP address is 192.168.123.1. The available client IP range is 192.168.123.2 through 192.168.123.254.

**1. LAN IP Address-** The IP address of the LAN interface. The **default** IP address is: **192.168.123.254**

2. Host Name is optional

3. WAN's MAC Address

If you click the Clone MAC button, you will find the MAC address of your NIC shown in WAN's MAC Address

4. Click on ” **Next**” to continue.

**Step 4: Configure the wireless settings.**

ADMINISTRATOR'S MAIN MENU   Status   Wizard   Logout

BASIC SETTING   FORWARDING RULES   SECURITY SETTING   ADVANCED SETTING   TOOLBOX

Setup Wizard - Wireless settings   [EXIT]

Wireless Radio    Enable    Disable

Network ID(SSID)   default

Channel   11

< Back   [ Start > Password > WAN > **Wireless** > Summary > Finish! ]   Next >

1. Select **Enabled** or **Disabled**. The **default** setting is **Enabled**.
2. **Network ID( SSID)** will be defaulted
- 3: **Channel-** Select Wireless Channel matching to your local area for Wireless connection
- 4: Click on ” **Next**” to continue.

**Step 5: Select the Wireless security method of your wireless configuration.**

Click on ” **Next**” to continue.

## Step 6: Summary

ADMINISTRATOR's MAIN MENU > Status > Wizard > Logout

BASIC SETTING FORWARDING RULES SECURITY SETTING ADVANCED SETTING TOOLBOX

Setup Wizard - Summary [EXIT]

Please confirm the information below

[ WAN Setting ]	
WAN Type	Dynamic IP Address
Host Name	ROUTER
WAN's MAC Address	00-50-18-00-00-FE

[ Wireless Setting ]	
Wireless	Enable
SSID	default
Channel	11
Security	None

Do you want to proceed the network testing?

< Back [ Start > Password > WAN > Wireless > **Summary** > Finish! ] Apply Settings

## Advanced Setup > Basic Setting > DHCP Server

Item	Setting
DHCP Server	<input type="radio"/> Disable <input checked="" type="radio"/> Enable
Lease Time	1440 Minutes
IP Pool Starting Address	50
IP Pool Ending Address	199
Domain Name	
Primary DNS	0.0.0.0
Secondary DNS	0.0.0.0
Primary WINS Server	0.0.0.0
Secondary WINS Server	0.0.0.0
Gateway	0.0.0.0 (optional)

**1. DHCP Server:** Choose either **Disable** or **Enable**

**2. Lease Time:** DHCP lease time to the DHCP client

**3. IP Pool Starting/Ending Address:** Whenever there is a request, the DHCP server will automatically allocate an unused IP address from the IP address pool to the requesting computer. You must specify the starting / ending address of the IP address pool

**4. Domain:** Optional, this information will be passed to the client

**5. Primary DNS/Secondary DNS:** This feature allows you to assign a DNS Servers

**6. Primary WINS/Secondary WINS:** This feature allows you to assign a **WINS** Servers

**7. Gateway:** The Gateway Address would be the IP address of an alternate Gateway.

This function enables you to assign another gateway to your PC, when DHCP server offers an IP to your PC.

After you finish your selection then

Either Click on “**Save**” to store what you just pick or click “**Undo**” to give up

### Advanced Setup > Basic Setting > Wireless

Item	Setting
Wireless	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
WMM Capable	<input type="radio"/> Enable <input checked="" type="radio"/> Disable
SSID	default
Channel	11
Security	None

Save Undo WDS Setting

- Wireless - Enabled** is the **default**. Selecting this option will allow you to set your Wireless Access Point (WAP) settings.
- WMM Capable-** Choose Enable or Disable WMM function
- SSID-** Service Set Identifier (SSID) is the name designated for a specific wireless local area network (WLAN). The SSID's factory **default** setting is **default**. The SSID can be easily changed to establish a new wireless network.( Note: SSID names may contain up to 32 ASCII characters).
- Channel-** **Channel 11** is the **default**. Devices on the network must share the same channel. (Note: Wireless adapters automatically scan and match the wireless settings. You may also select the channel you wish to use).
- Security-** You may select from three levels of encryption to secure your wireless network:
  - No Encryption, WEP.802.1x, WPA-PSK, WPA, WPA2-PSK, or WPA2.**
  - Security- No Encryption** is the **default** (as shown in the screen above).

1. **WEP Security**: Select the data privacy algorithm you want. Enabling the security can protect your data while it is transferred from one station to another. The standardized IEEE 802.11 WEP (128 or 64-bit) is used here.

2. **WEP Key 1, 2, 3 & 4**: When you enable the 128 or 64 bit WEP key security, please select one WEP key to be used and input 26 or 10 hexadecimal (0, 1,2...8, 9, A, B...F) digits.

3. **802.1X**: Check Box was used to switch the function of the 802.1X. When the 802.1X function is enable

4. **WPA-PSK/WPA-PSK2** : Another encryption options for WPA-PSK-TKIP and WPA-PSK2-ADE . Enter a password in the WPA-PSK /WPA-PSK2 field between 8 and 63 characters long for ASCII.64 characters(0~9,a~f) for HEX.

**WPA/WPA2** :The uses have to get a access form RADIUS server by performing user authentication. Enter the IP address of Radius server and RADIUS Shared Key.

5: Click on “**Save**” to store you just select

### Advanced Setup > Basic Setting > Change Password

Item	Setting

Save   Undo

This product's NAT firewall filters out unrecognized packets to protect your Intranet, so all hosts behind this product are invisible to the outside world. If you wish, you can make some of them accessible by enabling the Virtual Server Mapping.

A virtual server is defined as a **Service Port**, and all requests to this port will be redirected to the computer specified by the **Server IP**. **Virtual Server** can work with **Scheduling Rules**, and give user more flexibility on Access control. For Detail, please refer to **Scheduling Rule**.

For example, if you have an FTP server (port 21) at 192.168.123.1, a Web server (port 80) at 192.168.123.2, and a VPN server at 192.168.123.6, then you need to specify the following virtual server mapping table:

Service Port	Server IP	Enable
--------------	-----------	--------

21 19	2.168.123.1	V
80 19	2.168.123.2	V
1723 19	2.168.123.6	V

Click on **“Save”** to store what you just select or **“Undo”** to give up

Some applications require multiple connections, like Internet games, Video conferencing, Internet telephony, etc. Because of the firewall function, these applications cannot work with a pure NAT router. The **Special Applications** feature allows some of these applications to work with this product. If the mechanism of Special Applications fails to make an application work, try setting your computer as the **DMZ** host instead.

1. **Trigger**: the outbound port number issued by the application.
2. **Incoming Ports**: when the trigger packet is detected, the inbound packets sent to the specified port numbers are allowed to pass through the firewall.

This product provides some predefined settings.

1. Select your application and
2. Click **Copy to** to add the predefined setting to your list.

Note! At any given time, only one PC can use each Special Application tunnel.

Click on **“Save”** to store what you just select or **“Undo”** to give up

IP Address of DMZ Host	192.168.123. <input type="text"/>	<input type="checkbox"/>

### IP Address of DMZ Host

DMZ (Demilitarized Zone) Host is a host without the protection of firewall. It allows a computer to be exposed to unrestricted 2-way communication for Internet games, Video conferencing, Internet telephony and other special applications.

Click on **“Save”** to store what you just select or **“Undo”** to give up

NOTE: This feature should be used only when needed.

- Source IP address
- Source port
- Destination IP address
- Destination port
- Protocol: TCP or UDP or both.
- Use Rule#

For source or destination IP address, you can define a single IP address (4.3.2.1) or a range of IP addresses (4.3.2.1-4.3.2.254). An empty implies all IP addresses.

For source or destination port, you can define a single port (80) or a range of ports (1000-1999). Add prefix "T" or "U" to specify TCP or UDP protocol. For example, T80, U53, U2000-2999, No prefix indicates both TCP and UDP are defined. An empty implies all port addresses. **Packet Filter** can work with **Scheduling Rules**, and give user more flexibility on Access control. For Detail, please refer to **Scheduling Rule**. Each rule can be enabled or disabled individually.

Click on **“Save”** to store what you just select or **“Undo”** to give up

ID	URL	Enable
1	<input type="text"/>	<input type="checkbox"/>
2	<input type="text"/>	<input type="checkbox"/>
3	<input type="text"/>	<input type="checkbox"/>
4	<input type="text"/>	<input type="checkbox"/>
5	<input type="text"/>	<input type="checkbox"/>

**URL Blocking** will block LAN computers to connect to pre-defined Websites. The major difference between “Domain filter” and “URL Blocking” is Domain filter require user to input suffix (like .com or .org, etc), while URL Blocking require user to input a keyword only. In other words, Domain filter can block specific website, while URL Blocking can block hundreds of websites by simply a **keyword**.

**URL Blocking Enable**

Check if you want to enable URL Blocking.

**URL**

If any part of the Website's URL matches the pre-defined word, the connection will be blocked.

For example, you can use pre-defined word "sex" to block all websites if their URLs contain pre-defined word "sex".

**Enable**

Check to enable each rule.

Click on “**Save**” to store what you just select or “**Undo**” to give up

## Advanced Setup > Security Setting > MAC Control

The screenshot shows the 'MAC Address Control' configuration page. At the top, there are navigation tabs: 'ADMINISTRATOR's MAIN MENU', 'Status', 'Wizard', and 'Logout'. Below these are sub-tabs: 'BASIC SETTING', 'FORWARDING RULES', 'SECURITY SETTING' (selected), 'ADVANCED SETTING', and 'TOOLBOX'. A left sidebar contains a tree view with 'MAC Control' selected. The main content area has a title 'MAC Address Control' with a '[ HELP ]' link. It contains several settings:

- MAC Address Control:** A checkbox for 'Enable'.
- Connection control:** A checkbox. If checked, it allows selecting 'allow' or 'deny' for unspecified MAC addresses to connect.
- Association control:** A checkbox. If checked, it allows selecting 'allow' or 'deny' for unspecified MAC addresses to associate.
- DHCP clients:** A dropdown menu set to '-- select one --', a 'Copy to' button, and an 'ID' dropdown.
- Control Table:** A table with columns: ID, MAC Address, IP Address, Wake On Lan, C, and A. It contains 4 rows, each with a 'Trigger' button in the 'Wake On Lan' column.

At the bottom of the table are buttons for 'Previous page', 'Next page', 'Save', and 'Undo'.

MAC Address Control allows you to assign different access right for different users and to assign a specific IP address to a certain MAC address.

**MAC Address Control** Check “Enable” to enable the “MAC Address Control”. All of the settings in this page will take effect only when “Enable” is checked.

**Connection control** Check "Connection control" to enable the controlling of which wired and wireless clients can connect to this device. If a client is denied to connect to this device, it means the client can't access to the Internet either. Choose "allow" or "deny" to allow or deny the clients, whose MAC addresses are not in the "Control table" (please see below), to connect to this device.

**Association control** Check "Association control" to enable the controlling of which wireless client can associate to the wireless LAN. If a client is denied to associate to the wireless LAN, it means the client can't send or receive any data via this device. Choose "allow" or "deny" to allow or deny the clients, whose MAC addresses are not in the "Control table", to associate to the wireless LAN

## Advanced Setup > Security Setting > Miscellaneous

Miscellaneous Items [HELP]		
Item	Setting	Enable
▶ Remote Administrator Host / Port	0.0.0.0 / 80	<input type="checkbox"/>
▶ Administrator Time-out	600 seconds (0 to disable)	
▶ Discard PING from WAN side		<input type="checkbox"/>
▶ Disable UPnP		<input type="checkbox"/>

Save Undo

### Remote Administrator Host/Port

In general, only Intranet user can browse the built-in web pages to perform administration task. This feature enables you to perform administration task from remote host. If this feature is enabled, only the specified IP address can perform remote administration. If the specified IP address is 0.0.0.0, any host can connect to this product to perform administration task. You can use subnet mask bits "/nn" notation to specified a group of trusted IP addresses for example, "10.1.2.0/24".

NOTE: When Remote Administration is enabled, the web server port will be shifted to 80. You can change web server port to other port, too.

### Administrator Time-out

The time of no activity to logout automatically, you may set it to zero to disable this feature.

### Discard PING from WAN side

When this feature is enabled, any host on the WAN cannot ping this product.

**Disable UPnP:** Choose enable or disable the UPnP feature

Click on **"Save"** to store what you just select or **"Undo"** to give up

## Advanced Setup > Advanced Setting > System Log

The screenshot shows the 'System Log' configuration page within the 'ADVANCED SETTING' tab. The page has a breadcrumb trail: ADMINISTRATOR's MAIN MENU > Status > Wizard > Logout. Below the breadcrumb are tabs for BASIC SETTING, FORWARDING RULES, SECURITY SETTING, ADVANCED SETTING (selected), and TOOLBOX. A left sidebar contains a tree view with items: System Log (selected), Dynamic DNS, SNMP, Routing, System Time, Scheduling, and Performance. The main content area is titled 'System Log' with a '[ HELP ]' link. It contains a table with three columns: Item, Setting, and Enable. The table has five rows: 'IP Address for Syslog' with a text input containing '192.168.123.' and an 'Enable' checkbox; 'E-mail Alert' with an 'Enable' checkbox; 'SMTP Server IP and Port' with a text input; 'Send E-mail alert to' with a list box; and 'E-mail Subject' with a text input. Below the table are four buttons: 'View Log...', 'Send Mail Now', 'Save', and 'Undo'.

Item	Setting	Enable
▶ IP Address for Syslog	192.168.123. <input type="text"/>	<input type="checkbox"/>
▶ E-mail Alert		<input type="checkbox"/>
▶ SMTP Server IP and Port	<input type="text"/>	
▶ Send E-mail alert to	<input type="list"/>	
▶ E-mail Subject	<input type="text"/>	

Buttons: View Log..., Send Mail Now, Save, Undo

This page support two methods to export system logs to specific destination by means of syslog (UDP) and SMTP(TCP). The items you have to setup including:

### IP Address for Syslog

Host IP of destination where syslog will be sent to. Check **Enable** to enable this function.

### E-mail Alert Enable

Check if you want to enable Email alert (send syslog via email).

### SMTP Server IP and Port

Input the SMTP server IP and port, which are concated with ':'. If you do not specify port number, the default value is 25.

For example, "mail.your\_url.com" or "192.168.1.100:26".

### Send E-mail alert to

The recipients who will receive these logs, you can assign more than 1 recipient, using ';' or ',' to separate these email addresses.

### E-mail Subject

The subject of email alert, this setting is optional.

Click on **“Save”** to store what you just select or **“Undo”** to give up

## Advanced Setup > Advanced Setting > Dynamic DNS

Item	Setting
DDNS	<input checked="" type="radio"/> Disable <input type="radio"/> Enable
Provider	DynDNS.org(Dynamic) ▼
Host Name	<input type="text"/>
Username / E-mail	<input type="text"/>
Password / Key	<input type="text"/>

To host your server on a changing IP address, you have to use dynamic domain name service (DDNS).

So that anyone wishing to reach your host only needs to know the name of it. Dynamic DNS will map the name of your host to your current IP address, which changes each time you connect your Internet service provider.

Before you enable **Dynamic DNS**, you need to register an account on one of these Dynamic DNS servers that we list in **provider** field.

To enable **Dynamic DNS** click the check box next to **Enable** in the **DDNS** field.

Next you can enter the appropriate information about your Dynamic DNS Server.

You have to define:

Provider

Host Name

Username/E-mail

Password/Key

You will get this information when you register an account on a Dynamic DNS server.

Click on **“Save”** to store what you just select or **“Undo”** to give up

## Advanced Setup > Advanced Setting > SNMP

Item	Setting
▶ Enable SNMP	<input type="checkbox"/> Local <input type="checkbox"/> Remote
▶ Get Community	<input type="text"/>
▶ Set Community	<input type="text"/>
▶ IP 1	<input type="text" value="0.0.0.0"/>
▶ IP 2	<input type="text" value="0.0.0.0"/>
▶ IP 3	<input type="text" value="0.0.0.0"/>
▶ IP 4	<input type="text" value="0.0.0.0"/>
▶ SNMP Version	<input checked="" type="radio"/> V1 <input type="radio"/> V2c

In brief, SNMP, the Simple Network Management Protocol, is a protocol designed to give a user the capability to remotely manage a computer network by polling and setting terminal values and monitoring network events.

### Enable SNMP

You must check either Local or Remote or both to enable SNMP function. If Local is checked, this device will response request from LAN. If Remote is checked, this device will response request from WAN.

### Get Community

Setting the community of GetRequest your device will response.

### Set Community

Setting the community of SetRequest your device will accept.

IP 1,IP 2,IP 3,IP 4

Input your SNMP Management PC's IP here. User has to configure to where this device should send SNMP Trap message.

### SNMP Version

Please select proper SNMP Version that your SNMP Management software supports.

Click on **“Save”** to store what you just select or **“Undo”** to give up.

**Advanced Setup > Advanced Setting > Routing**

**Routing Table** [HELP]

Enable

RIPv1  RIPv2

ID	Destination	Subnet Mask	Gateway	Hop	Enable
1	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="checkbox"/>
2	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="checkbox"/>
3	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="checkbox"/>
4	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="checkbox"/>
5	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="checkbox"/>
6	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="checkbox"/>
7	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="checkbox"/>
8	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="checkbox"/>

**Routing Tables**

Allow you to determine which physical interface address to use for outgoing IP data grams. If you have more than one routers and subnets, you will need to enable routing table to allow packets to find proper routing path and allow different subnets to communicate with each other.

Routing Table settings are settings used to setup the functions of static and dynamic routing.

**Dynamic Routing**

Routing Information Protocol (RIP) will exchange information about destinations for computing routes throughout the network. Please select RIPv2 only if you have different subnet in your network. Otherwise, please select RIPv1 if you need this protocol.

**Static Routing**

For static routing, you can specify up to 8 routing rules. You can enter the destination IP address, subnet mask, gateway, hop for each routing rule, and then enable or disable the rule by checking or un-checking the Enable checkbox.

Click on **“Save”** to store what you just select or **“Undo”** to give up.

## Advanced Setup > Advanced Setting > System Time

The screenshot shows the 'System Time' configuration page. The interface includes a navigation menu on the left with options like System Log, Dynamic DNS, SHMP, Routing, System Time, Scheduling, and Performance. The main content area is titled 'System Time' and contains several sections:

- Get Date and Time by NTP Protocol:** This section is selected. It includes a 'Sync Now!' button, a 'Time Server' dropdown set to 'time.nist.gov', and a 'Time Zone' dropdown set to '(GMT-08:00) Pacific Time (US & Canada)'.
- Set Date and Time using PC's Date and Time:** This section is unselected. It includes a text input field for 'PC Date and Time' containing '2007年10月2日 下午 04:30:41'.
- Set Date and Time manually:** This section is unselected. It includes fields for 'Date' (Year: 2002, Month: Jan, Day: 1) and 'Time' (Hour: 0, Minute: 0, Second: 0).
- Daylight Saving:** This section is unselected. It includes radio buttons for 'Enable' and 'Disable' (selected), and fields for 'Start' (Jan 1) and 'End' (Jan 1).

At the bottom of the configuration area, there are 'Save' and 'Undo' buttons.

### Get Date and Time by NTP Protocol

Selected if you want to Get Date and Time by NTP Protocol.

### Time Server

Select a NTP time server to consult UTC time

### Time Zone

Select a time zone where this device locates.

#### Set Date and Time using PC's Date and Time

Set the Date and Time from your PC

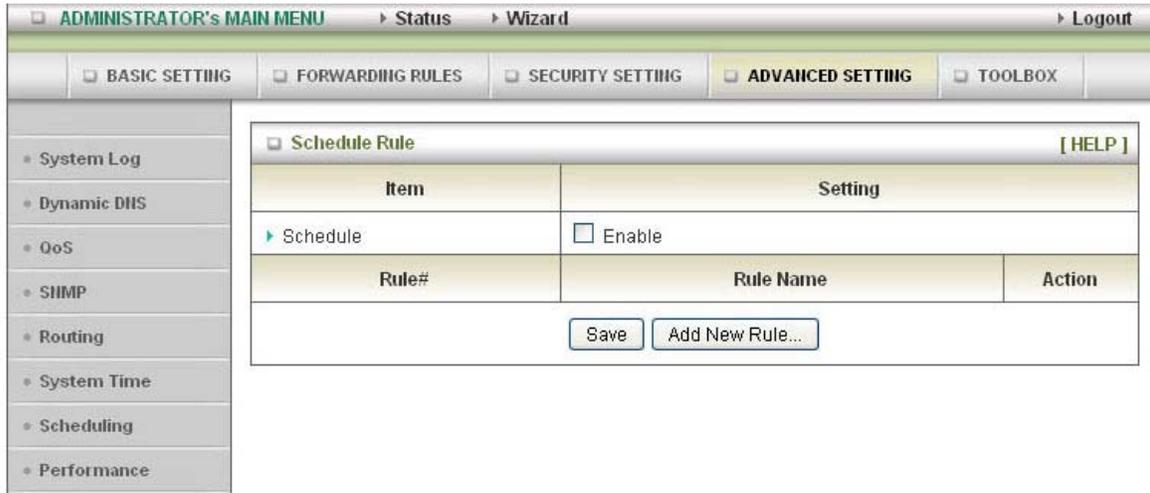

#### Set Date and Time manually

Selected if you want to Set Date and Time manually.

### Daylight Saving

Click on **“Save”** to store what you just select or **“Undo”** to give up.

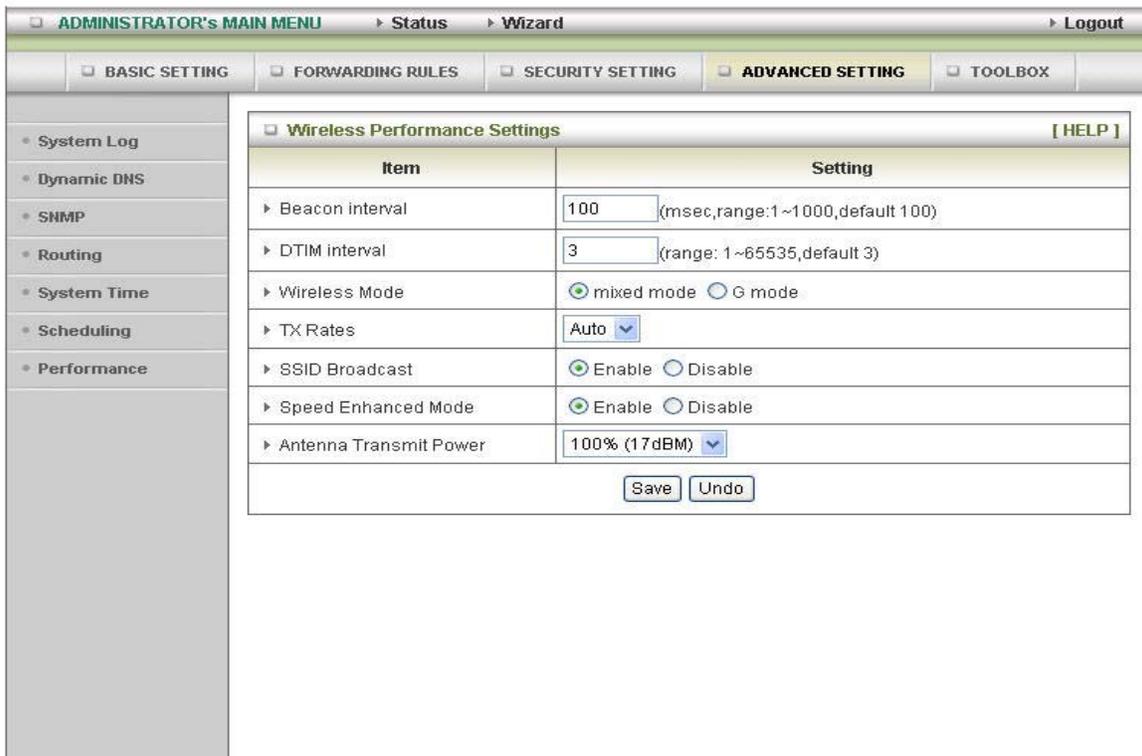

### Advanced Setup > Advanced Setting > Scheduling

You can set the schedule time to decide which service will be turned on or off. Select the “enable” item. Press “Add New Rule” You can write a rule name and set which day and what time to schedule from “Start Time” to “End Time”.

The following example configure “ftp time” as everyday 14:10 to 16:20 Click on “Save” to store what you just select.

### Advanced Setup > Advanced Setting > Performance

**Beacon Interval]**

Beacons are packets sent by an Access Point to synchronize a wireless network. Specify a Beacon interval value between 1 and 1000. The default value is set to 100 milliseconds.

**DTIM interval] :**

Enter a value between 1 and 65535 for the Delivery Traffic Indication Message (DTIM). A DTIM is a countdown informing clients of the next window for listening to broadcast and multicast messages. When the Access Point has buffered broadcast or multicast messages for associated clients, it sends the next DTIM with a DTIM Interval value. AP clients hear the beacons and awaken to receive the broadcast and multicast messages. The default value for DTIM interval is set to 3

**Wireless mode**

**Select wireless connection mode for wireless connection**

**TX Rates**

Select the basic transfer rates based on the speed of wireless adapters on the WLAN (wireless local area network).

**SSID Broadcast**

Choose enable or disable the wireless SSID broadcast. By turning off the broadcast of the SSID ,it is possible to make your wireless network nearly invisible.

**Speed Enhanced Mode**

**This is Tx Burst function for Ralink wireless solution**

**Antenna Transmit Power:**

Select the Transmit Power of the Antenna

Click on **“Save”** to store what you just select or **“Undo”** to give up

**Advanced Setup > Tool Box > System Info**

The screenshot shows the 'System Info' page in the AcuConnect 2.0 web interface. The page has a navigation bar at the top with 'ADMINISTRATOR's MAIN MENU', 'Status', 'Wizard', and 'Logout'. Below the navigation bar are tabs for 'BASIC SETTING', 'FORWARDING RULES', 'SECURITY SETTING', 'ADVANCED SETTING', and 'TOOLBOX'. On the left side, there is a sidebar menu with options: 'System Info', 'Firmware Upgrade', 'Backup Setting', 'Reset to Default', 'Reboot', and 'Miscellaneous'. The main content area is titled 'System Information' and contains a table with two columns: 'Item' and 'Info'. The table lists 'WAN Type' (Dynamic IP Address (R7.00b0 .070929)), 'Display Time' (Sat Jan 1 01:01:44 2005), and 'Log Message' (System Log selected, Routing Table unselected). Below this is a 'System Log' section with a table showing log entries with columns 'Time' and 'Log'. The log entries include 'syslogd: syslogd started', 'boot: WAN MAC address: 00:50:18:00:00:fe', 'dhcpd: Listening on LAN 192.168.123.0', 'httpd: HTTP NG(bind) sd=6, port=6984', and several 'dhcpd: offer' and 'httpd: 192.168.123.51 logins successful' messages. At the bottom of the log table are 'Refresh' and 'Clear' buttons.

Item	Info
▶ WAN Type	Dynamic IP Address (R7.00b0 .070929)
▶ Display Time	Sat Jan 1 01:01:44 2005
▶ Log Message	<input checked="" type="radio"/> System Log <input type="radio"/> Routing Table

Time	Log
Jan 1 00:00:06	syslogd: syslogd started
Jan 1 00:00:07	boot: WAN MAC address: 00:50:18:00:00:fe
Jan 1 00:00:11	dhcpd: Listening on LAN 192.168.123.0
Jan 1 00:00:11	httpd: HTTP NG(bind) sd=6, port=6984
Jan 1 00:00:40	dhcpd: offer 192.168.123.50 to 00:40:f4:73:d1:f9
Jan 1 00:39:06	dhcpd: offer 192.168.123.51 to 00:13:d4:1b:e3:a4
Jan 1 00:41:00	dhcpd: offer 192.168.123.51 to 00:13:d4:1b:e3:a4
Jan 1 00:49:46	httpd: 192.168.123.51 logins successful

**You can view the System log, Routing Table information in this page**

## Advanced Setup > Tool Box > Firmware Upgrade

The screenshot shows the 'Firmware Upgrade' page within the 'TOOLBOX' section of the 'ADMINISTRATOR'S MAIN MENU'. The page has a breadcrumb trail: 'ADMINISTRATOR'S MAIN MENU > Status > Wizard > Logout'. The 'TOOLBOX' section is active, and the 'Firmware Upgrade' sub-section is selected. The main content area is titled 'Firmware Upgrade' and contains a 'Firmware Filename' field with a text input box and a '浏览...' (Browse...) button. Below the field, it states: 'Current firmware version is R7.00b0 .070929. The upgrade procedure takes about 140 seconds.' A note follows: 'Note! Do not power off the unit when it is being upgraded. When the upgrade is done successfully, the unit will be restarted automatically.' At the bottom, there are two buttons: 'Upgrade' and 'Cancel'. The left sidebar contains a menu with items: 'System Info', 'Firmware Upgrade', 'Backup Setting', 'Reset to Default', 'Reboot', and 'Miscellaneous'.

You can upgrade firmware by clicking **Firmware “Upgrade”** button

### Advanced Setup > Tool Box > Backup Setting

You can backup your settings by clicking the **Backup Setting** button and save it as a bin file. Once you want to restore these settings, please click **Firmware Upgrade** button and use the bin file you saved

### Advanced Setup > Tool Box > Reset to Default

You can also reset this product to factory default by clicking the **Reset to default** button

### Advanced Setup > Tool Box > Reboot

You can also reboot this product by clicking the **Reboot** button

## Advanced Setup > Tool Box > Miscellaneous

Item	Setting
▶ MAC Address for Wake-on-LAN	00-00-00-00-00-00 <input type="button" value="Wake up"/>
▶ Domain Name or IP address for Ping Test	<input type="text"/> <input type="button" value="Ping"/>
▶ Reboot Device in schedule	<input checked="" type="checkbox"/> Enable Use schedule rule <input type="text" value="---None---"/> <input type="button" value="Save"/> <input type="button" value="Undo"/>

### MAC Address for Wake-on-LAN

Wake-on-LAN is a technology that enables you to power up a networked device remotely. In order to enjoy this feature, the target device must be Wake-on-LAN enabled and you have to know the MAC address of this device, say 00-11-22-33-44-55. To click on “Wake up” button will make the router to send the wake-up frame to the target device immediately.

### Domain Name or IP address for Ping Test

Use ping to test connection of domain name or IP address

### Reboot Device in schedule

When clicked on the Enable, device will reboot automatically follow the schedule rule, so you have to setup schedule rule first. Then the schedule time will show in the schedule the list.
