# Welcome to SSM

*Simple Stock Manager is living application which is frequently improved and updated. To avoid annoying automatic Web update, it is your responsibility to visit a <u>www.simple-stock-manager.com</u> and decide to update. This document describes version 2.01 of May 2013 but mostly fits later releases.*

# 1. Introduction

### Efficient

SSL is stock control software designed to be immediately operational and easy to use for any kind of user, in any kind of organization, in any country.

### Simple

Unlike most "stock management" option of ERP or MES systems, the main concern of SSM is not to deliver data to the management or the accountant level (although it does it very well) but to give to the people in the workshop a real fast and efficient tool to save time, improve comfort and reliability.

#### **Powerful**

Based on Microsoft .Net standards and SQL data base, SSM is very flexible and really open to any customization or enhancements. These improvements, mostly made on demand for specific needs, are of two types:

- New functions, new features or interfaces changes adapted to your working habits
- New implementations to integrate your information system or enterprise network.

# 2. Getting started

### Installation

The great quality of SMM is its simplicity: the installation consists of copying a directory containing a set of less than 10 files, anywhere on a writable part of your disk. The delivery package is a zip file downloaded from <u>www.simple-stock-manager.com</u>. The installation procedure is described in a document and a video on this site. People familiar with windows explorer will not even need to read any document to install.

For advanced topics concerning installation, such as sharing data base or web access, the best is to call us as there are many architecture are possible.

### **User interface**

The user interface (called main window) contains four tabs. It behaves like any standard Window XP-7 application.

Each tab displays data array called gridview by Microsoft.

### Screen zones

The main window is divides into different zones that are respected for all tabs.

- Tabs selection is used to switch tabs, at any time.
- Search tools zone depends of the current tab and are optional.
- Data display zone contains data according to the current tab.
- The button zone contains all possible actions on specified data.

#### **Item selection**

To execute an action, you sometimes need to select a line first. This is done clicking with the left mouse button on the left end of a line.

Produ	icts S	uppliers	Logs	Inventory							
		•	Fan	nily	•	Reference		•	Suppl	ier	
	ld	Family		Reference	Designatio	on	Supplier	Quantity	Mini	Location	U-Buy

	GRUSON	19	/	5	stock	0	0				
ıt	GE SECURI	. 10		10	stock	0	0				

#### **Items search**

To ease most frequent operations such as searching by Family, Reference, Supplier or Designation, there are search boxes on each tab. To search an item which contains "screw" in its designation, you just need to type "screw" in the designation search box, type enter or click the button and you will get all products that have "screw" in their designation.

# 3. Products tab

### Display

The first tab is for daily use such as inserting or extracting products from the stock or just checking quantities. It is named "products tab".

For SSM, a product is an item that has a reference. All product of the same reference will be counted as "product quantity" of the specified reference.

### **Products tab buttons**

Button	Action
Help	Opens a web browser on SSM web pages.
Refresh	Restore data from data base in the original form, after sorting
	data or to make sure that a networked base is updated.
Clear	Deletes all product from data base, after user confirmation.
Import	Imports data from an excel csv file. Ti be used when migrating

	your existing stock to SSM
Export	Send displayed data to an excel file, respecting the displayed order
Alarms	Show only products under minimum
Input	Insert selected product in stock
Output	Extract selected product form stock
New	Creates a new product
Modif	Edit the selected line
Quit	Exits application

### **Product definition**

Before anything, let us see what "products" means for SSM, as terms are very important to avoid misunderstanding when working under stress. Here are the definitions of product parameters:

Field	Format	Description
Id	Integer	Identifier. Each product has a unique identifier given automatically by the data base system. It cannot be changed. You normally never have to change it. Usually, they are given in chronological order.
Family	String	To facilitate sorting, each product can have a family name associated. There are no pre- defined rules about how to choose family names. No specific processing is done on the family name as the application uses Id and references.
Reference	String	Each product has one reference, each reference corresponds to only one product. This reference can be the bar code value or any unique string. Choosing a good reference naming system is the key of user comfort and system reliability
Designation	String	This field is not used (expect for search requests) by the system and should be used to clarify the reference by aspects details or user warnings.
Supplier	String	The supplier name is taken from the supplier table which is detailed in a different tab. You are not obliged to use this field.
Quantity	Decimal	The number of actual products of the same reference in stock. This number can be anything, even a negative value as it is your

		responsibility to check conformity with the actual stock.
Mini	Decimal	This is the minimum quantity you always want to keep in stock. When the real quantity is lower, the quantity will appear in red, as for ID
		14 in the samples screen. Mini are specified
		when creating a new product.
Location	String	This field is not used by the system, you can write anything that will help users to find or sort products. Location is specified when creating a
		new product.
U-Buy	Decimal	This field contains the unitary cost of the product, when inserted to stock. You are not obliged to use buying costs in SSM. Using CUMP feature, this value is an average value of actual stock.
T-Buy	Decimal	This is the sum (total) of U-Buy for specified product and quantities.
U-Sell		This field contains the unitary price of the product. You are not obliged to use buying costs in SSM. Using CUMP feature, this value is an average value of actual stock.
T-Sell	Decimal	This is the sum (total) of U-Sell for specified product and quantities.

# 4. Suppliers tab

## 1. Display

The suppliers tab is used to keep track of supplier's information, for user comfort.

# 6. Inventory tab

### Display

The inventory tab is mostly independent of the usual stock management. It is dedicated to inventory operation, performed on specific occasions to check that the theoretical stock, in the products tab, really fits what can be seen in the warehouse. To make this check, this specific tab enables the following operation:

- Fill a list of known products with theoretical quantities
- Enable the user to add at will the actual quantities
- Display differences
- Update date into stock panel only quantities that have been checked

### **Inventory definition**

In the inventory list, some information from all products of the stock tab is duplicated, completed by two columns specific to inventory.

Field	Format	Description
Id	Integer	Product identifier

Quantity	Decimal	Theoretical quantity in stock, from product tab
Real	Decimal	Actual quantity checked by user
Difference		Automatically updated difference. Colored in red if actual stock is lower than theoretical, yellow if actual is over, not colored if equal.

## Inventory tab buttons

Button	Action
Help	Opens a web browser on SSM web pages.
Refresh	Restore data from data base in the original form, after sorting data or to make sure that a networked base is updated.
Clear	Deletes all inventory data, after user confirmation.
Export	Send displayed data to an excel file
Save	Update stock quantities according to user actual quantities
Save	Update stock according to user real/actual quantities
New	Initialize the inventory product list from stock information's.
	Make sure previous data have been saved.
Quit	Exits application

# 7. Advanced features

As SSM is an open application based on standards such as Microsoft .Net, Access, SQL, Excel, there are many possibilities of installing, using and customizing it to fit your requirements, your information system or your network. You will find in the description of the parameters of June 2013 some ideas. Please contact us for more information.

#### **Parameters**

SSM parameters are stored in the text file SSM.ini. All parameters are grouped under the title [divers] called section. These parameters are described here after, default values are in strong:

[Divers]

Parameter	Role
English=1	Force english langage, wich is normally
	recognized from windows country.
English=0	Force french langage, wich is normally
	recognized from windows country.
Facturation=1	Enables billing dates
Facturation=0	Removes billing dates
Inventaire=1	Shows Inventory tab
Inventaire=0	Do not show Inventory tab
CUMP=1	Enables average unitary stock values
CUMP=0	Uses fixed prices
Base	Enables networking. Contact us for more
	details.
VirguleExcel=1	Solve some decimal coding issues when
	required

Your contact: Mail: <u>info@solti.fr</u> Site: <u>www.simple-stock-manager.com</u>
