## 1 Use of the C200 Compiler

The Efka C200 Compiler is a software tool for the programming of upgrade control functions.

**The compiler provides the following basic functions:**

- predetermined functions which are integrated by means of a system file
- approx. 64kB for user programs and data
- error management routine with automatic error marking
- loader for program storing in the control
- a multi-tasking time sharing mechanism

The control (socket B18) and the computer (socket com1) are connected using interface IF232-3.

**Set of special C200 Compiler accessories consisting of:**

**order no. 1113262**

- C200 Compiler Software CD-ROM
- C200 Compiler User Manual
- EFKANET IF232-3 Interface

**See C200 Compiler user manual for more information on programming and use of control commands!**

FL1	Sewing foot lifting without pulsing	STB	Blow fabric onto stack
FSPL	Thread tension release	STS	Stitch lock
FW	Thread wiper	STV	Stitch condensing
FZ	Thread puller	VR	Backtacking

### 3 Putting into Service

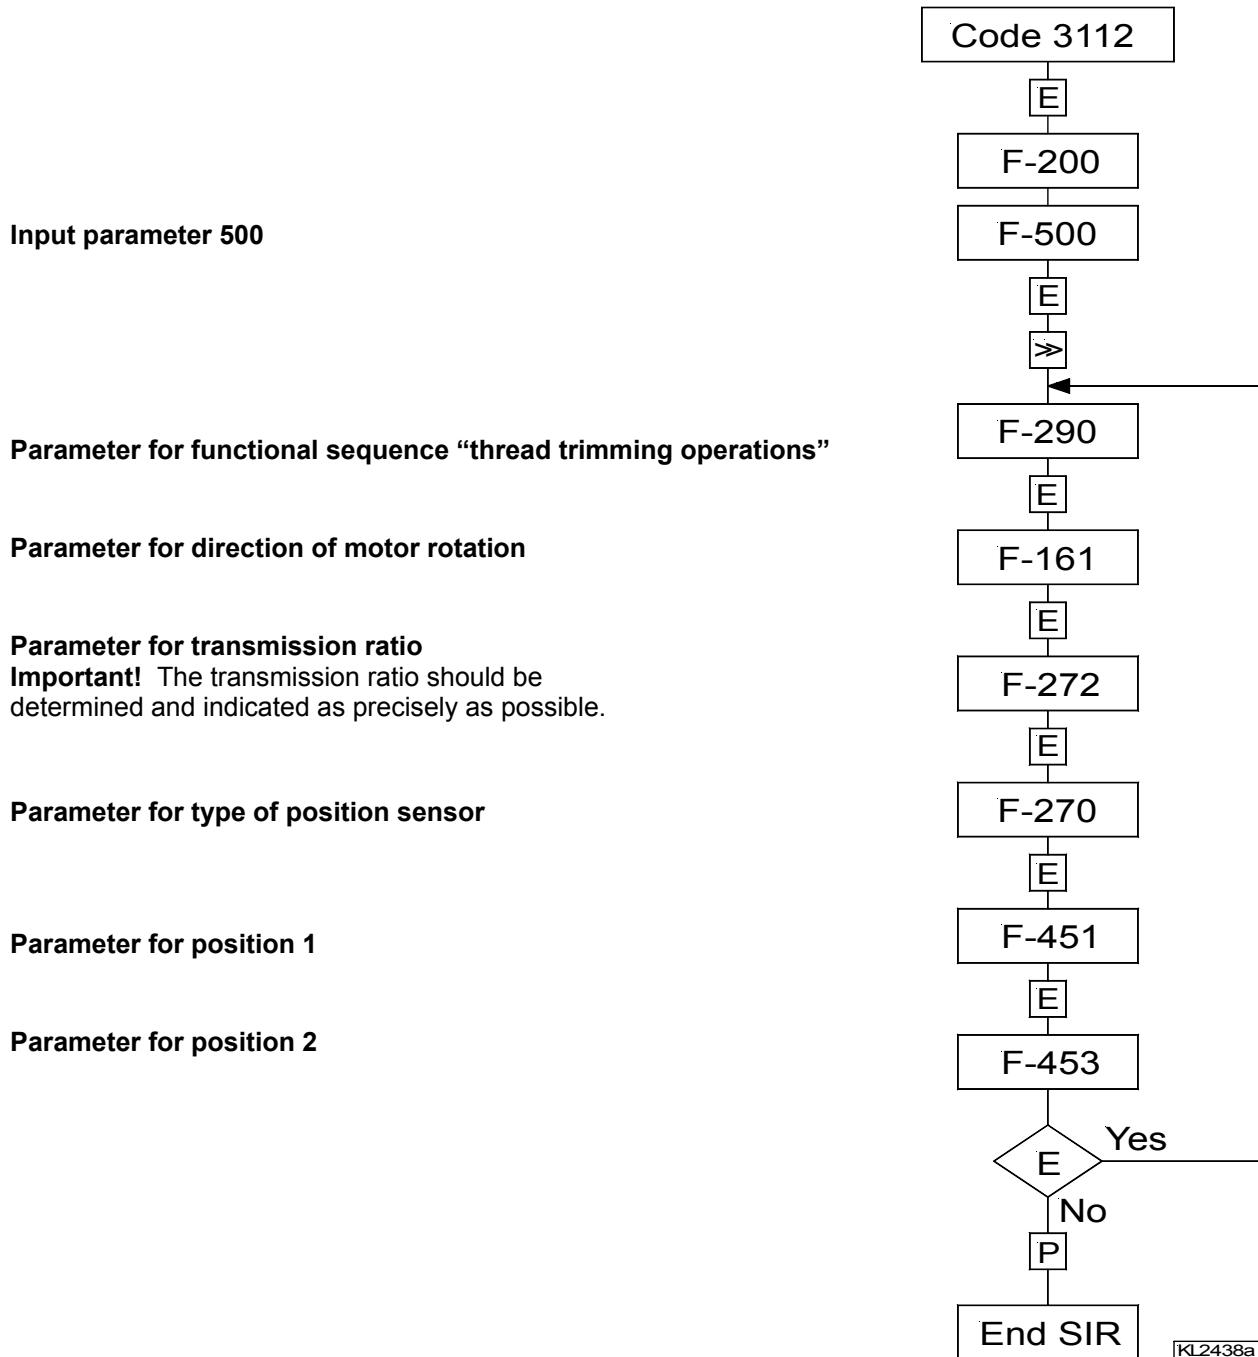

Before putting the control into service, the following must be ensured, checked and/or adjusted:

- **The correct installation of the drive, position transmitter and accompanying devices, if necessary**
- **The correct selection of the trimming operation using parameter 290**
- **If necessary, the correct adjustment of the direction of motor rotation using parameter 161**
- **The correct selection of the functions of keys (inputs) using parameters 240...249**
- **The setting of the transmission ratio between motor shaft and machine shaft using parameter 272**
- **The setting of the type of position sensor using parameter 270**
- **If necessary, the setting of the number of angular degrees after the sensor position using parameter 271**
- **If necessary, the setting of the positions using parameter 171 (possible with all settings of parameter 270)**
- **The correct positioning speed using parameter 110**
- **The correct maximum speed compatible with the sewing machine using parameter 111**
- **The setting of the remaining relevant parameters**
- **Start sewing in order to save the set values**

See instruction manual for details!

## 4 Setting and Putting into Service with the Aid of the Fast Installation Routine (SIR)

The Fast Installation Routine (SIR) passes through all parameters necessary for programming the functional sequence and the positions.

The values can be varied by pressing key +/- . When the parameter is displayed on the V810 control panel, press the E key once more for the value to be displayed.

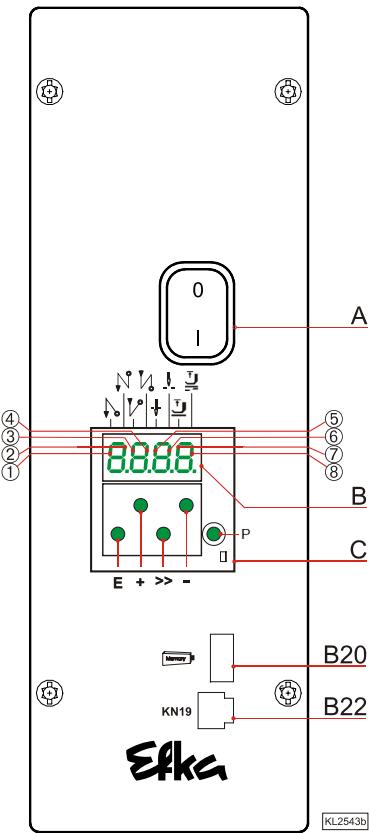

Exit the routine any time by pressing the P key once, and select a new parameter. Exit programming by pressing the P key twice, and the drive is ready for a new sewing operation.

See instruction manual for details!

If parameter 239 is set to >0, it is possible to operate a key at the input of the B18/8 connector.

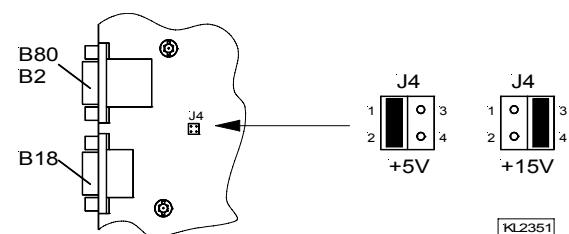

BI1159

There is a supply voltage of +5V for external devices on the B18/4 socket. After opening the cover, this voltage can be changed to +15V by replugging a multipole connector J1 on the printed circuit board.

+5V = Connect left-hand pins 1 and 2 with jumper (factory setting)

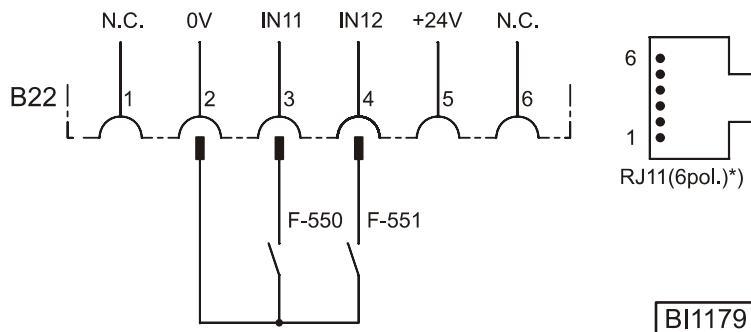

+15V = Connect right-hand pins 3 and 4 with jumper

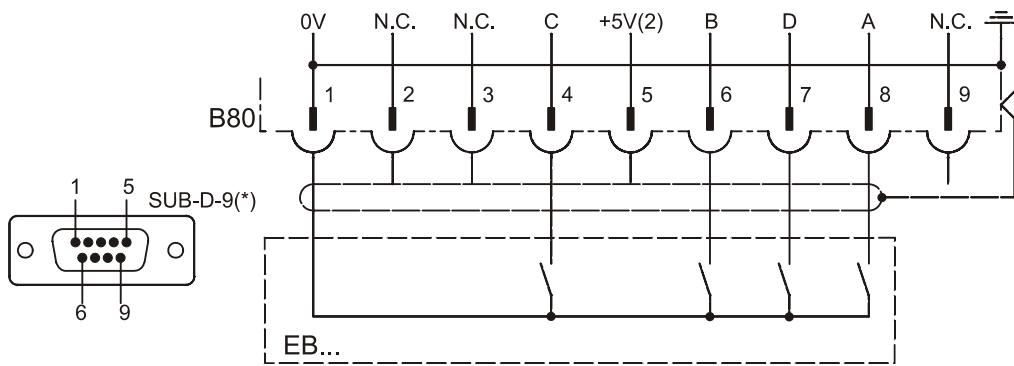

**ATTENTION!**

Before opening the cover, turn power off!

## 5.4 Connection of a Sewing Light with Transformer

### ATTENTION!

Before opening the cover, turn power off!

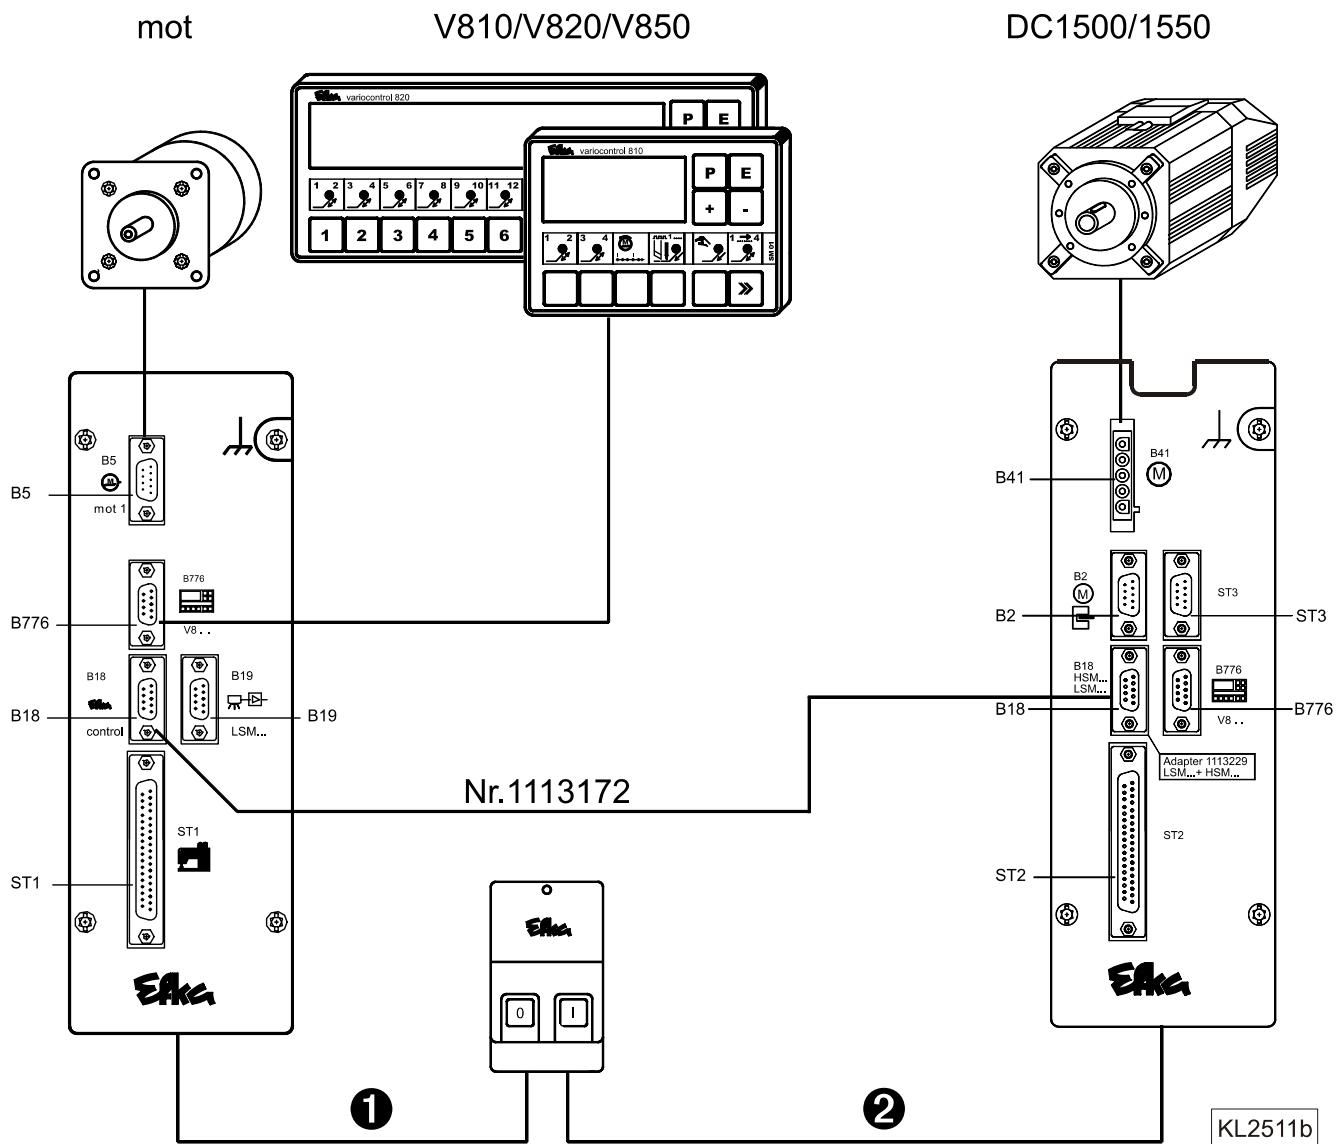

- **Switch off the control and remove mains plug from outlet**
- Unscrew the control unit from the machine table
- Loosen 2 screws (**A**) each at the front and at the rear
- Open the left part of the housing
- Pull the sewing light cable through the provided cable bushing
- Area (**B**): Connect strands with clamp on the printed circuit board
- Insert earth lead into plug-in device on the housing part
- Close and screw-connect the housing
- Mount the control unit on the machine table

### CAUTION!

When the sewing light is connected, it is always current-carrying (230V), even if the control unit is switched off! Only one sewing light with transformer can be connected to the control unit!

## 6 Connection Scheme of SM210A Stepping Motor Control

The control (B18) and the SM210A....stepping motor control (B18) are connected using adapter cord no. 1113172.

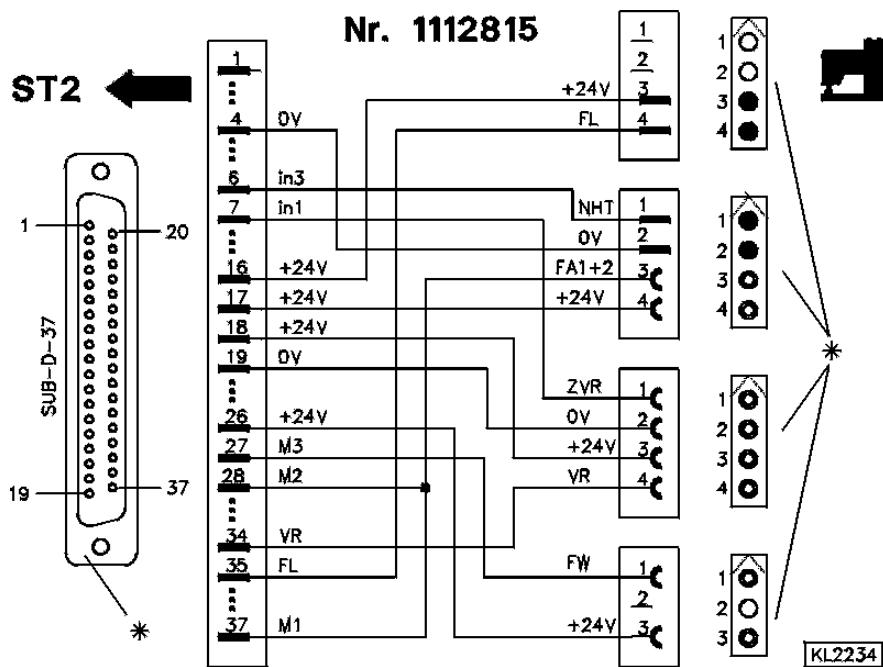

If a light barrier is required for the sewing process, it must be connected to socket B9 on the stepping motor control. The light barrier signal is transmitted via the connecting cable from the SM210A to the sewing drive. Should an IPG001 pulse encoder or a HSM001 Hall sensor module be necessary besides the light barrier module, use adapter cord no. 1113229, which is to be connected to socket B19 of the SM210A.... stepping motor control.

Unless a stepping motor control is provided, adapter cord no. 1113229 for light barrier module and pulse encoder or Hall sensor module is connected to socket B18 of the sewing drive.

## 10 Slide-in Strips for the V810/V820 Control Panels

### Slide-in strips for the V810 control panel

### Slide-in strips for the V820 control panel

#### Note

When changing the setting of parameters 291 / 292, the V810 / V820 functions change as well, save function keys F1 / F2 which are influenced by parameters 293 / 294.
