3.1 Appearance

There shall be no such defects as deep scratch, crack, rust, discoloration or leakage, which may adversely affect the commercial value of the cell.

3.2 Dimension

Diameter : $18.3 + 0.1/-0.3$ mm (Max. 18.4 mm)

Diameter is defined as the largest data value measured on the "A" area of a cylindrical cell.

Height : 65.0 ± 0.2 mm (Max. 65.2 mm)

4. Performance Specification

4.1 Standard test condition

4.1.1 Standard Charge

Unless otherwise specified, "Standard Charge" shall consist of charging at constant current of 650 mA. The cell shall then be charged at constant voltage of 4.2 V while tapering the charge current. Charging shall be terminated when the charging current has tapered to 50mA. For test purposes, charging shall be performed at $23 \pm 2^\circ\text{C}$.

4.1.2 Standard Discharge

"Standard Discharge" shall consist of discharging at a constant current of 260mA to 2.5 V. Discharging is to be performed at $23 \pm 2^\circ\text{C}$ unless otherwise noted (such as capacity versus temperature).

4.1.3 Fast Charge / discharge condition

Cells shall be charged at constant current of 4000mA to 4.2 V with end current of 100 mA. Cells shall be discharged at constant current of 10000mA to 2.5 V. Cells are to rest 10 minutes after charge and 30 minutes after discharge.
