## 1.0 Technical Data

Power supply .....	.230 V / 115 V
Power consumption .....	.2500 W / 2300 W
Number of strokes .....	.5000 strokes/min
Sound pressure level .....	.92 dB(A)
Sound energy level .....	.105 dB(A)
Hand/Arm-Vibration .....	.10 m/s <sup>2</sup>
Weight .....	.122 kg

## Comes with

**EXTRO-STRIPPER**  
**Spare blade**  
**Ear protectors**  
**Thread Plug**  
**Tools**  
**Operating manual**  
**Safety gloves**

## 2.0 CE Declaration of conformity

We declare under our sole responsibility that this product is in conformity with the following standards of standardization documents: EN 50 144, according to the provisions of the Directives 73/23/EWG, 89/336/EWG 98/37 EG

CE 05

Dipl.-Ing. (FH) Dieter Hammel  
Konstruktionsleitung

WOLFF | Eine Marke der Uzin Utz Gruppe | D-71665 Vaihingen/Enz | Dieselstraße 19

## 3.0 Safety instructions

Disconnect the power supply before any maintenance is carried out.

Use only recommended blades and ensure it is sharp before starting.

Maintenance should be undertaken only by qualified personnel.  
Use only genuine Wolff spare parts.

### Transport

To avoid harm or danger, always remove the blade before transporting the machine.

Disconnect the power supply and the plug of the motor before removing the handle.

Always wear ear protectors!

The user and any person not far off should always use ear protectors!

See supplementary sheet "General safety instructions"

### 3.1 Introduction

This operating manual should be used to get the most benefit from your EXTRO-STRIPPER.

Following these instructions will both extend the life of your machine and reduce repair costs. Please ensure any user of the machine is fully familiar with the instructions for use before allowing work to start.

**Use this machine only**

- as instructed in this operating manual
- with the machine in perfect working order.

### 3.2 Danger while working with the machine

The EXTRO-STRIPPER is designed to the highest technical standards. Incorrect use can be dangerous!

Disturbances that could impair safety, have to be eliminated at once.

**WOLFF cannot be held responsible for any damage or loss caused by incorrect use. Correct use also includes**

- to take care of all directions from the operating manual and
- the execution of maintenance and service.

### 3.3 Restriction of use

The EXTRO-STRIPPER is exclusively for removing bonded floor coverings in dry environments.

It should not be used for any other purpose. Wolff cannot be held responsible for any damage or loss caused by incorrect use.

### 3.4 Genuine Spare Parts

Spare parts and accessories are manufactured uniquely for the Turbo- Stripper. It must be emphasized that parts obtained from unauthorized sources must not be used.

Wolff cannot be held responsible for the performance of or any damage arising from the use of machines in which genuine spare parts have not been used.

This is particularly important with replacement blades.

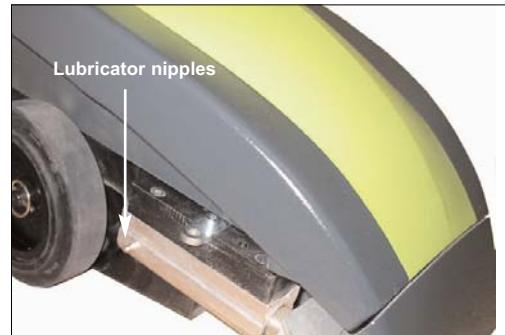

## 4.0 Maintenance

The EXTRO-STRIPPER is virtually maintenance-free. Have the guides of the swing bolts lubricated from time to time (after approx. 500 square meters).

The lubricator nipples are located collateral on the front side (see picture). The used grease will flush dirt out of the machine.

Press maximum 3 to 4 times with the grease gun. Never press too much grease into the machine. Otherwise the mechanism will be blocked.

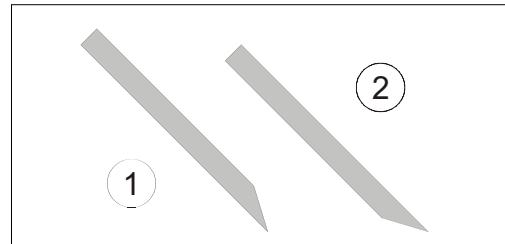

### Changing the blade

Disconnect the power supply before changing the blade. Use work gloves for your own safety.

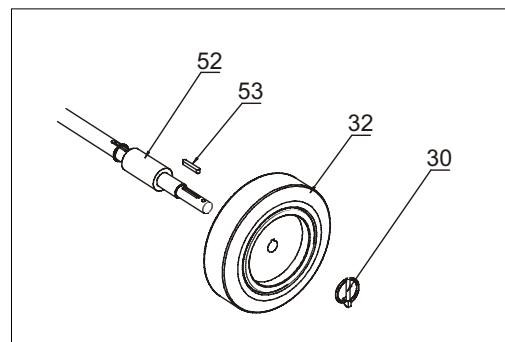

- tip the machine
- put on the blade protection (enclosed in the tools set)  
**Warning!** Very sharp blade! You may cause injury without using the blade protection!
- secure the tipped machine from tilting over
- clean and loosen the screws of the blade mounting,  
**Attention!** Set the wrench at a position opposite to the blade to avoid injury.
- replace the blade.

Make sure that the blade fits in exactly into the support. On normal and hard subfloors the bevel of the blade should show upwards (1), on soft subfloors (e.g. chipboards) the bevel should show downwards (2).

### Changing the driving wheels

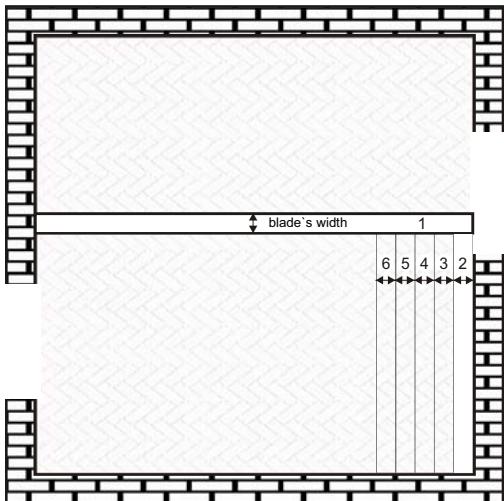

Remove the splint-pins and pull the wheels from the axle. Do not loose the springs (Pos. 53) under any circumstances!

## 5.0 Use

The EXTRO-STRIPPER removes any bonded floor coverings in strips. This procedure corresponds with the customary method of using a hand floor scraper. The stripper works with a thin steel blade at very high frequency, minimizing vibration and noise.

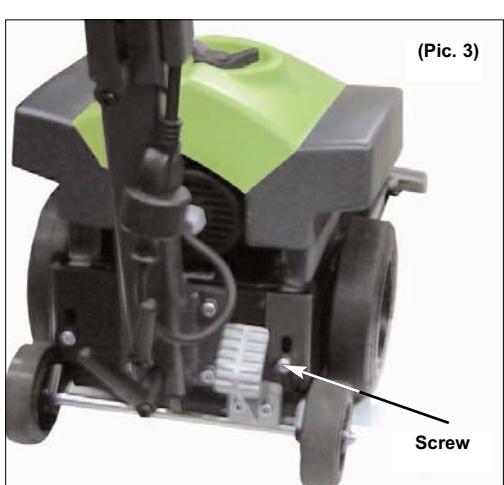

The EXTRO-STRIPPER is self propelled. The motor actuates both the blade and the machine movement. The blade drive starts as soon as the machine is switched on. The hand clutch will engage the drive.

(Pic. 1)

(Pic. 2)

(Pic. 3)

## Preparations

Before starting work, cut the floor covering into strips of about 35 cm. You cannot work faster if you cut wider strips.

To begin, cut one strip crosswise.

Then lift the floor slightly in order to get the blade underneath it. We recommend to cut the first strip at right angles to the main working direction. By so doing access to the adjacent strips is made easier.

Cut the strips smaller if the floor covering is bonded very securely, e.g. with an epoxy adhesive.

The blades are sharpened by the floor pavement. Therefore the blade only has to be changed if it is twisted or becomes worn.

The driving wheels are subjected to wear. They have to be changed after approximately 16 mm (0.6 inch) of the surface has been worn away.

Otherwise the working angle of the striking apparatus will not be correct especially critical with cork or foam backed carpets.

### 5.1 Pull Back

The patented Pull Back system was developed to allow for an easy pulling back of the EXTRO Stripper. (Pic. 2)

When you have reached a wall or another obstacle during your work, simply pull the handle to lift the driving wheels. The machine comes to a standstill although the wheels continue to rotate.

If you pull the handle more powerfully, you can pull back the machine to the place where the next lane is to be stripped off.

If the handle is moved forward again, the driving wheels reach the floor again and the machine moves forward.

When working, make sure the handle is pressed gently to the front so that the small transportation rollers are lifted.

#### 5.1.1 Locking the Pull Back system

For certain floors, it may be required to lock the Pull Back system. Use the two screws in the lifting brackets. (Pic. 2)

Unscrew the screws, press the handle to the front and tighten the screws through the lifting brackets to the angled clips.

If you pull the handle, the blade is lifted from the floor immediately without stopping the drive.

## 5.2 Switching on the machine

The EXTRO-STRIPPER is equipped with a power-on indicator lamp and red lever located at the top of the switch housing. The switch has a restart protection for low-voltage failures.

If the lamp does not indicate power-on, use another power socket or check power supply.

The machine is switched on by pulling the red lever. The drive and the impact system start at the same time.

When the red lever is released, the machine is switched off. Note the after-running of the machine.

## 6.0 Information about certain floor coverings

### Needlepunch felt and tufted carpets on jute hessian backings

Cut into strips of approx. 35 cm (14 inch) width. If the flooring is bonded very tight, cut strips smaller. The machine should remove the flooring without slipping wheels.

### Carpets with foam backing

A sharp blade is essential in order to ensure the floor covering is removed together with the foam backing.

Remove floorings across the width, particularly if you have an uneven sub-floor.

### Tiles

Use blade of the same width as the tiles and use a new blade. Tiles above size 30 x 30cm (12 x 12inch) have to be cut into half. If the sub-floor is uneven, use smaller blades.

In all cases, check from time to time to ensure the blade is still sharp. If it is not or any distortion has occurred, replace it immediately.

## 7.0 Trouble Shooting

Trouble	Eventual cause	Elimination
Machine does not run	Power supply disconnected blown fuse defective cable or plug	Have machine repaired by a qualified electrician, respective change parts
Undue force necessary or excessive vibration	Blade is blunt	Change blade
Excessive vibration	Expendable parts are worn out	Return machine for service and/or repair
