Overview

The VPL-SW125 WXGA projector is an ideal choice for close projection applications in the corporate and educational markets. This projector offers:

LOW TOTAL COST OF OWNERSHIP

The model has a low brightness mode which reduces power consumption and extends the lamp lifetime to approximately 6000 hours, which means lower operating costs across the board.

EASE OF OPERATION

This projector is easy to install in small or difficult spaces, and has easy to operate controls.

BRIGHT, CLEAR PRESENTATIONS

Excellent contrast, consistent colour stability, high picture quality and longer durability will improve visibility and enhance teaching quality.

Highlights

* The VPL-SW125 has a package of security measures, including password protection, and physical anti-theft anchor points
* The VPL-SW125 has six picture modes (Dynamic, Standard, Game, Living, Cinema and Presentation) that can be selected to suite the nature of the source material.

* The filter only needs to be changed when a new lamp is fitted, potentially halving disruption due to maintenance
* Direct Power On/Off - With this function, there is no need to go through 'Standby' mode when powering up the projector. The projector can be set to activate as soon as power is applied.

Features

Features	Benefits
Superior Image Quality & Rich Color Reproduction	A color brightness output of 2600 lumens and an oustanding contrast ratio of 3800:1 bursts out of Bright Era® LCD panels. 12bit 3D Digital Gamma Correction provides smoother and more accurate color reproduction.
Short Throw Projection	With the short throw lens that gives a throw ratio of 0.62:1, the VPL-SW125 is capable of projecting large image from short distance. It helps to reduce glare of presenter, or reduce the space to reproduce a large image.

TCO and ECO	-Replace lamps less frequently with a long lamp life of 3000/4500/6000H! -Save energy costs! With the push of the "Eco Mode" button on projector or Remote Commander, Lamp mode saves the consumption of lamp wattage; Power Saving mode kicks in if there is no operation for 10 minutes without any signal input; Standby mode can reduce power consumption in standby. "Eco Mode" button is also user-customizable providing parameter selection of Lamp mode, Power saving mode, and Standby settings. -Same lamp model and Remote Commander among the series. All the Sony VPL-SX125 / SW125 / EX100 / EX120 / EX145 / EX175 / EW130 entry series projectors incorporate same lamps and remotes. Reduces customer needs to handle various kinds of lamps.
Smart APA (Auto Pixel Alignment)	When a computer is used as a picture source, APA automatically optimizes Phase, Pitch and Shift values. These can also be adjusted manually.
Automatic Keystone Adjustment	The projector can detect keystone distortion and can correct it automatically. (Note that since this is an electronic correction, it will reduce the picture quality slightly).
WXGA Widescreen Resolution	The VPL-SW125 has a colour light output of 2600 ANSI lumens and with a native WXGA (1280 x 800) widescreen resolution panel is perfect for video or presentations direct from a laptop or PC.
