CLIMBING SKINS

Workbook 2015/16 - EN

FORMULA POMOCA SWISS MADE

For more than 80 years, the best athletes in the world as well as top guides and mountain rescuers have trusted POMOCA skins.

Pomoca skins have gained global recognition over the past decade, thanks to innovations such as Safer Skin (100% waterproof), Glide (anti glopping and gliding treatment) and Race (the fastest skins ever made). Pomoca textile engineers continue to apply and advance this knowledge, resulting in further technological advances and an ever better product.

In the pages that follow, you will discover the technological secrets that allow for faster gliding and better grip.

SWISS  MADE

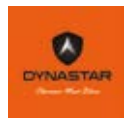

Formula POMOCA

This is where the requirement profiles for the RACE, CLIMB and FREE operational ranges originated. Our research indicates that each target group requires different grip and glide characteristics. POMOCA met these requirements with a clearly structured skin development program aimed at meeting individual mountaineers' requirements. POMOCA's range of colors is emblematic of these requirement profile characteristics. As a result of these efforts, POMOCA has expanded its role as a climbing skin world leader by advancing ski mountaineering innovation.

“Pomoca reflects the ideal partner to quickly reach the mountains that I want to ski”

Jérémie Heitz

I started skiing very early at the age of 2. After a long record in alpine skiing, I naturally moved to freeriding. Lucky to be born in the Swiss Alps, I have one of the most beautiful and wild playgrounds at my disposal where I have trained myself so far.

Pomoca reflects the ideal partner to quickly reach the mountains that I want to ski in this alpine setting.

Having used Pomoca skins for some years now to reach isolated places, I noticed that regardless of the type of snow, the skins adhere perfectly and occupy very little space in my backback. Really handy!

Awards:

- Freeride World Tour 2014: 3rd place

Kilian Jornet

I grew up in a mountain lodge, located at 2,000 meters above sea level, in the Catalan Pyrenees, where mountains were always my playground. I was introduced to outdoor activities at a young age, and I quickly developed a passion for mountain sports along with a natural aptitude for adventure and physical challenges, which has increased with experience.

My love for mountains and passion for overcoming challenges has led me to sponsor the Summits of My Life project, a series of mountain challenges all over the world.

In the winter, I trust the quality of Pomoca skins because of their glide and grip when conquering a mountain summit.

Awards:

- Seven-time winner of the Skyrunner World Series
- Three-time winner of Pierra Menta ski mountaineering competition
- Four-time winner of the mountain ski individual World Cup
- Four-time Vertical Race world champion

Technologies

The technologies of POMOCA are based on a deep understanding of snow, enhanced by research and development. Textile engineers and chemists work hand-in-hand with mountain guides and athletes. Together they modify the materials' contact surfaces and thus push the effectiveness of climbing skins to unimaginable heights.

SAFER SKIN

SAFER SKIN

Safety through waterproofness

With the development of the exclusive POMOCA SAFER SKIN technology, a new ski skin generation is born. All POMOCA self-adhesive skins benefit from this special treatment. Composed of an added 100 % waterproof membrane positioned between the weaving and the glue, SAFER SKIN offers ultimate safety thanks to the stability of the glue, optimum gluing of the skin and easy folding thanks to good stability.

EVER DRY

EVER DRY

Anti-glopping treatment

Due to its exclusive anti-glopping properties, EVER DRY treated skins have been the favorite choice of long distance ski tourers for many years. The entire length of every skin is treated with EVER DRY technology, guaranteeing life-long protection and no need for spray treatment. All POMOCA skins feature EVER DRY technology.

GLIDE

GLIDE

Superior gliding performance

POMOCA GLIDE technology offers enhanced performance with every stride. With less effort, ski tourers achieve exceptional gliding performance. Only available on some models.

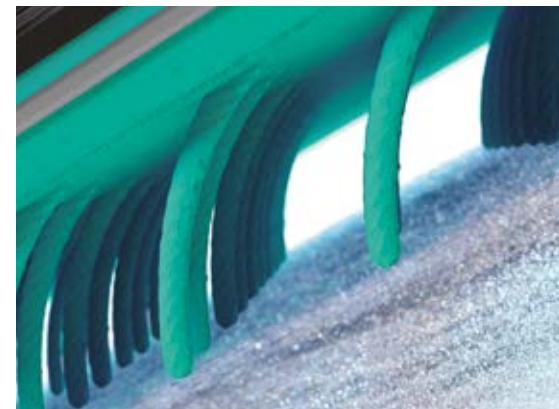

GRIP

GRIP

Safe grip when climbing

It is important to have a good gripping ability when climbing. POMOCA has therefore developed a special material combination that shows both durability and dynamic tension and combines high elasticity with resistance to twisting and abrasion. Available with the series CLIMB and FREE.

What is a skin?

1. A PLUSH WITH ANGELED FIBERS...

The plush offers grip and glide to the skin. These characteristics vary depending on the material used (nylon, mixed or mohair) and the way the fibers are woven (thicker or thinner, longer or shorter, more or less angled). Normally, a skin that glides more, grips less

3. ...WITH A LINING...

The lining prevents from transferring water from skin to the adhesive and reducing its performance. A lining that is not waterproof causes damp on the adhesive and reduces its tack (stickiness). The adhesive could come away from the skin and stick to the ski. A quality lining guarantees the correct functioning of the adhesive and also increases resistance to the skin tearing.

2. ...SUBJECT TO VARIOUS TECHNICAL TREATMENTS...

These treatments provide waterproofing for fibers, which is key to preventing snow clumps from forming. Wet fibers can freeze with a change in temperature. When the fibers freeze they attract snow which sticks to the skin, forming clumps. It also gives the colour to the skins and helps with fixing the fibers to the angle/backing, which is why it is important for durability and glide/grip.

4. ...AND AN ADHESIVE

The adhesive attaches the skin to the ski. In cold and wet conditions, adhesion may be difficult: in general, the adhesives do not perform well in water or cold, as it is harder for them to stick in a wet environment (mist or heat in spring/damp snow) or in the cold.

TIPON

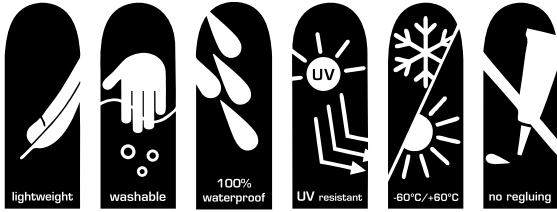

Your journey in the mountains starts with an enjoyable uphill ride: TIPON makes it easier!

The new TIPON membrane technology is based on the latest generation of polysiloxanes. Combining two types of induction (a membrane and an adhesive) directly on the fabric brings about great performance properties, such as 100% waterproof and high quality gluing, while keeping the climbing skin simple and light weight.

Innovative performance and technical excellence make TIPON a revolutionary membrane technology. Climbing skins with TIPON come to be more compact and easy to use due to novel characteristics that push the boundaries of existing gluing and membrane technologies. From 100% waterproofness to UV and extreme temperatures resistance, TIPON takes a step forward in offering safety and comfort at the same time.

Product characteristics

The POMOCA skin with TIPON technology is the thinnest and lightest skin on the market. It is very easy to use: with a washable adhesive, it does not need regluing and it is not sensitive to heat nor UV.

TIPON Technologies

The new TIPON membrane offers an excellent performance at several levels:

- 100% waterproof. The membrane completely seals the surface of the plush.
- No delamination risk: perfect mechanical coupling plush - membrane.
- Perfect skin trimming.
- Light weight: 50% lighter than any other classic membrane.
- Packable: 40% less volume than a classic skin model.

The new TIPON adhesive offers high performance:

- No glue delamination risk: perfect chemical coupling membrane – adhesive.
- Extreme temperature resistant: No risk of freezing.
- Washable: it can be hand washed with water and soap.
- UV resistant: it can be exposed to the sun and heating.
- No need to reglue. The adhesive is durable.

The TIPON membrane and the TIPON adhesive merge together with the plush in one unit: a reliable and easy to use climbing skin.

Available only in specialized stores.

SWISS MADE

FREE SPLITBOARD

100% made of Nylon, the FREE SPLITBOARD skin benefits both from the antiglopping EVER DRY and the waterproof SAFER SKIN technologies. Robust and with an extremely good grip, the FREE skin is ideal for safely exploring all terrain types while keeping within an affordable budget.

Easily adaptable to all splitboard types thanks to the ready2climb Splitboard concept, this skin is available in two sizes covering all splitboard lengths available on the market.

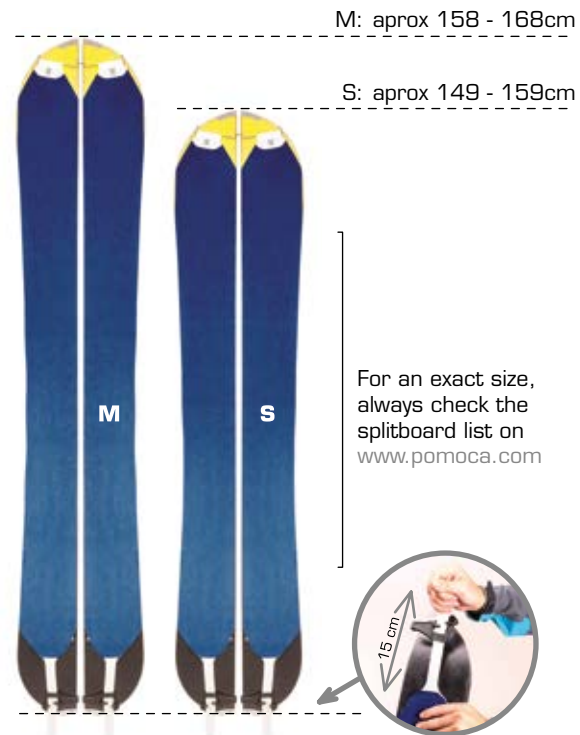

FREE PRO SPLITBOARD TIPON

The FREE PRO SPLITBOARD TIPON skin is a 30% Nylon and 70% Mohair mixed skin, specially designed for keen splitboarders motivated to conquer new terrains. The skin benefits of the TIPON technology that integrates a minimal thickness with a latest generation adhesive and 100% waterproof membrane. The easy to use, light and very compact nature of the FREE PRO SPLITBOARD TIPON will take up very little space in a backpack and will be perfectly tailored to your splitboard.

Easily adaptable to all splitboard types thanks to the ready2climb concept for splitboards, this skin is available in two sizes that cover all splitboard lengths on the market.

Ready2climb for splitboards:

- Take the selected skin, adjust the tip attachment to your splitboard, remove the protective sheet and attach the skin to the base of the splitboard.
- Using the POMOCA cutter, cut both sides of the skin to an even length.
- Perfect adhesion between the skin and splitboard thanks to the front attachment.
- Easy change the buckle if necessary.
- Easy positioning and adjustment on the heel of splitboard thanks to the elastic strap and SB Tail Hook.
- You are now ready to start your journey!

M = 158 - 168 cm.

POMOCA
SWISS MADE

RACE PRO

Glide forever

POMOCA RACE PRO skins owe their success to the finest, hand-selected raw materials and the new GLIDE RACE treatment. This formula, a POMOCA trade secret, has been achieved through a lengthy testing and selection process. The result: a race skin with revolutionary quality and performance. All the more reason why POMOCA RACE PRO is the first choice of the ski mountaineering world elite.

RACE

The winning skin

We asked ourselves: why do 9 out of 10 elite mountain skiers trust in POMOCA RACE skins? The clear and unequivocal response is that it is due to their gliding properties. But the POMOCA glue technology is also part of the reason. Why? Because POMOCA RACE skins can be placed more quickly and securely as they retain their adhesive power even after several skin changes.

RACE PRO VERTICAL

75g/skin*

Pomoca Skin RACE PRO VERTICAL is the lightest climbing skin ever designed especially for Vertical Races. With Pomoca RACE PRO VERTICAL you get the same gliding as with the RACE PRO, saving over 10% of weight on skins. The weight that might make the difference at the arrival line.

* 59 mm/ en 140 cm, without fixation

RACE PRO SELLARONDA

The RACE PRO SELLARONDA skin is specially designed for competitive ski mountaineering on groomed ski trails, such as the Sellaronda Skimarathon which takes place each year in Italy. With the same technical properties as the Race Pro, it has a width of 55mm (10% lighter than the 62mm) which is best suited for groomed and low-tech surfaces, allowing better glide on flat or gentle slopes in particular.

ready2climb

Your skins ready in 2 minutes

The POMOCA development department works hard to make your life easier. Preparing a self-adhesive skin for skis can take a long time and requires specific knowledge. POMOCA has transformed the old, time consuming process of trimming skins into the new universal, light, and easy-to-apply **ready2climb** set. The new **ready2climb** set can be cut to a specific ski in just two minutes without any special tools. The new adjustable loop can be fixed to any type of ski. For this system, POMOCA offers a complete list of skins on the market, so you can find the self-adhesive skin best suited to your needs.

Choosing the correct skin has never been so simple:

- On the web site www.pomoca.com, enter the name of your ski model to find the correct skin size.
- Select your preferred skin quality.
- Two pairs of buckles of different sizes are sold with the skin.
- Take the selected skin, adjust the tip attachment to your ski, remove the protective sheet and attach the skin the base of the ski.
- Using the POMOCA cutter, cut both sides of the skin to an even length.
- You are now ready to start skiing!

Click Lock

The Click Lock is the safe way to attach the skin to the ski tip. With only 2 "clicks" you can change your buckle and choose among 5 different sizes. No tools are needed, you can even do it with gloves.

The Click Lock is made of polyamide and covered with an elegant aluminum sticker to protect the stitching. It resists to over 60 kg.

The Click Lock is as well available as spare part. To install the Click Lock as spare part, you need only a screwdriver (3 screws).

SWISS MADE

Back Fix

A skin for all ski lengths

Back Fix is the evolution of a fixing system that has been tested and is easy to use. The skin has a strap already sewn to the back although the front can be cut to adjust to the ski length. Therefore the Back Fix skin adapts perfectly to all ski lengths.

The adjustable bracket is fitted on the front of the skin making this a universal system. With just 3 screws, you can precisely fit this bracket to all skis, no matter the spatula shape and length.

With the skin adjusted to the ski length, the Pomoca precision cutter supplied allows you to trim the sides of the skin by automatically releasing the ski edges.

Your pair of skins is ready in 10-15 minutes.

Do you want to carefully manage your stock (one skin size for all skis)? Do you want more precision for the size of your ski? Back Fix is made for you.

easySet

Everything you need to set a skin from a roll

easySet from POMOCA is the perfect complement for your skin roll. **easySet** offers everything you need to prepare 6 or 12 pairs from a 21m or 42m roll. Choose between three different easySets: Back Fix, Tradition and Race. This is a flexible and simple "DIY" concept for quality skins to be applied inexpensively.

Depending on your requirements and your model of skis, you can cut the exact skin length from the roll and with a few quick steps the fastenings can be applied and cut to the ski's measurements.

Back Fix easySet

It doesn't have buckles. (The buckles need to be ordered separately)

- 1 pair of Click Lock
- 1 pair of Back Fix with rivets
- 1 bag for skins
- 1 precision cutter
- 1 user manual

Art. Nr. 10-0007160100

Tibial Protector

- Reusable
- Adaptable to any point on foot

This protector is the solution for pressure caused by your ski boots. Made with dermatologically tested silicone, it relieves pressure and friction on your lower leg. It can be cut to fit any location on the lower leg or foot and used multiple times.

Washable up to 25 times. Dimensions: 7.0 x 9.5 cm. Thickness of 2 mm.

Art.- Nr. 10-0007110100

RACE Ski Bag

A great protection for your competition skis! The first bag in the market designed specifically for ski mountaineering racers. Thoughtful design with elastic and waterproof material that adapts exactly to the form of the ski. Special protection for bindings. Includes place for poles and skins and a pocket for accessories.

Adjustable holder (for shoulder or hand carrying). Drying towel for skis included. Adapted to skis from 150 to 170 cm long, and up to 72 mm center width.

Art.- Nr. 10-0007190110

new!

Two-color Wax

Two-in-one ski wax!

Emergency rub-on wax to keep in your backpack. Prevents glooping on climbing skins and facilitates better gliding. Two wax types to accommodate different snow conditions. Packed in a nylon bag with a mini ice scraper.

The two-color rub-on wax allows use in different snow conditions: red (65%) for warm conditions (the most common), and blue (35%) for colder conditions. Ergonomic form for easy application.

Rub on the entire surface of your climbing skins, always from top to bottom, with special attention to the area below the ski binding. Use the mini ice scraper to scrape snow and ice off of the skin or ski. Size: 60x40x14 mm, 30 g.

Art.- Nr. 10-0007170720

new!

Monodosi Wax

- Easy application
- Eco-friendly

Monodosi wax with integrated application system. Achieves deep penetration into the skin thanks to the liquid formula. 100% ecologically friendly formula.

Liquid, eco-friendly wax card for single use. Prevents glooping and facilitates better gliding. Very easy application thanks to an applicator that's part of the packaging – just fold the card, press to extract the wax and apply using the folded card. Apply on the entire climbing skin, always with the direction of the fibers, paying special attention to the area below the binding. Thanks to the low viscosity of the wax, it penetrates very easily into the skin to avoid ice build-up on the root of the skin hairs. Volume: 10 g; good for a pair of skins. Please discard package in an appropriate place after use.

Art.- Nr. 10-0007170710

Wax

A liquid wax for POMOCA skins. Perfect for increasing the impregnation of used skins. It helps to prevent ice glooping and improves gliding.

Art.- Nr. 10-0007170700

HISTORY

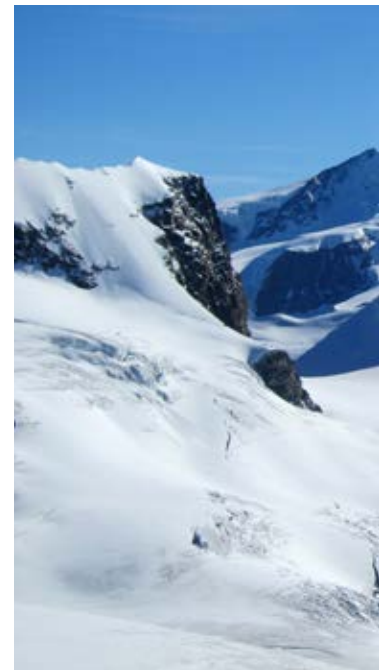

Since 1870, when they imported their first models to the French-speaking region of Switzerland, the history of the Dufour Family has been linked to tourism and the development of skiing. The family also organized ski excursions and competitions for the prestigious hosts of Montreux in Switzerland.

In the 1930s, Louis Dufour, an engineer with a passion for sports, and especially for high mountain skiing, developed and marketed the "DUFOUR-GAILLARD" rescue sled. Light and compact enough to carry in a backpack, this cloth sled allows an injured person to be taken to the nearest shelter thanks to its skis and poles. Eric Dufour, the son of Louis, developed the production of non-slip skins, and later adhesive skins, making use of his technical knowledge and his experience as a hiker. With

the help of his wife, he directed the company until his death in 1988. His son, Guy Dufour, took over as manager in 1996. In February 2011, POMOCA joined the SALEVA Group, turning a new page in its history and facing new challenges.

As the Swiss specialist in adhesive ski skins, POMOCA has been known for more than 80 years for the excellent quality of its products and its technological innovations. Always seeking to move forward, the brand is the clear leader in the industry today.

POMOCA is constantly developing new products, from accessories to innovative concepts, to improve handling and bring pleasure and satisfaction to ski mountaineering lovers.

1933
Founding of the company
Dufour & Cie

1939
Production of the first non-slip skins
