

## Product Tech Update: 08 C-Kite Bar -5<sup>th</sup> Line Kit.

The 08 C-Kite Bar will ship complete with a 5<sup>th</sup> line kit for use with the 08 Yarga, riders who purchase the Yarga and intend using it with another bar will need to purchase the 5<sup>th</sup> line kite separately and trim their set-up accordingly.

The short red-knotted-kite-bridle line will be available separately for riders who wish to leave one line attached to each of their kites to facilitate faster switching.

The component parts of the 5<sup>th</sup> line kite are shown below.

When attaching the bridle to the kite for the first time; take the red-knotted-kite-bridle and pass the closed loop end through the 5<sup>th</sup> line attachment point on the center of the LE. Then pass the entire red line back through the loop so it forms a larks-head around the LE attachment point. To complete rigging your kit just select the correct knot on the bridle according to the size of the kite you are flying and cinch up the blue flying line above that knot.

Depending on your riding style and bar set up preferences you may wish to try one knot either side of the recommended knot position for each size kite. Your 5<sup>th</sup> line should be under slightly less tension than your front flying lines at all times, it is designed to support the center of the LE and provide added stability to the kite.

The 5<sup>th</sup> line can also be used to water relaunch and self-land your kite, for further instructions please refer to the upcoming Yarga user manual.
