Document No. U14514EE2V0UM00
Date Published December 2000

CE

This equipment complies with the EMC protection requirements.

Warning

This is a ´Class A´ (EN 55022: 1994) equipment. This equipment can cause radio frequency noise when used in the residential area. In such cases, the user/operator of the equipment may be required to take appropriate countermeasures under his responsibility.

Caution

This equipment should be handled like a CMOS semiconductor device. The user must take all precautions to avoid build-up of static electricity while working with this equipment. All test and measurement tools including the workbench must be grounded. The user/operator must be grounded using the wrist strap. The In-Circuit Emulator probe target connector plug and/or its adapter pins should not be touched with bare hands.

Regional Information

Some information contained in this document may vary from country to country. Before using any NEC product in your application, please contact the NEC office in your country to obtain a list of authorized representatives and distributors. They will verify:

- Device availability
- Ordering information
- Product release schedule
- Availability of related technical literature
- Development environment specifications (for example, specifications for third-party tools and components, host computers, power plugs, AC supply voltages, and so forth)
- Network requirements

In addition, trademarks, registered trademarks, export restrictions, and other legal issues may also vary from country to country.

Introduction

Product Overview

The IE-78K0-NS-P04 and the IE-780818-NS-EM4, when combined with the IE-78K0-NS-A, are used to debug the following target devices that belong to the 78K/0 Series of 8-bit single-chip microcontrollers.

- μPD780816(A) Subseries

Target Readers

This manual is intended for engineers who will use the IE-78K0-NS-P04 and the IE-780818-NS-EM4 with the IE-78K0-NS-A to perform system debugging.
Engineers who use this manual are expected to be thoroughly familiar with the target device's functions and use methods and to be knowledgeable about debugging.

Organization

When using the IE-78K0-NS-P04 and the IE-780818-NS-EM4, refer to not only this manual (supplied with the IE-780818-NS-EM4) but also the manual that is supplied with the IE-78K0-NS-A.

IE-78K0-NS-A User's Manual	**IE-78K0-NS-P04 IE-780818-NS-EM4 User's Manual**
· Basic specifications · System configuration · Part names · External interface functions	· General · Parts names · Installation · Differences between target devices and target interface circuits

Purpose

This manual's purpose is to explain various debugging functions that can be performed when using the IE-78K0-NS-P04 and the IE-780818-NS-EM4.

Terminology

The meanings of certain terms used in this manual are listed below.

Term	Meaning
Emulation device	This is a general term that refers to the device in the emulator that is used to emulate the target device. It includes the emulation CPU.
Emulation CPU	This is the CPU block in the emulator that is used to execute user-generated programs.
Target device	This is a device (a μPD780816(A) Subseries chip) that is the target for emulation.
Target system	This includes the target program and the hardware provided by the user. When defined narrowly, it includes only the hardware.
IE system	This refers to the combination of the IE-78K0-NS-A, the IE-78K0-NS-P04 and the IE-780818-NS-EM4.

Conventions

Data significance weight : Higher digits on the left and lower digits on the right

Note : Footnote for item marked with **Note** in the text.

Chapter 1 General

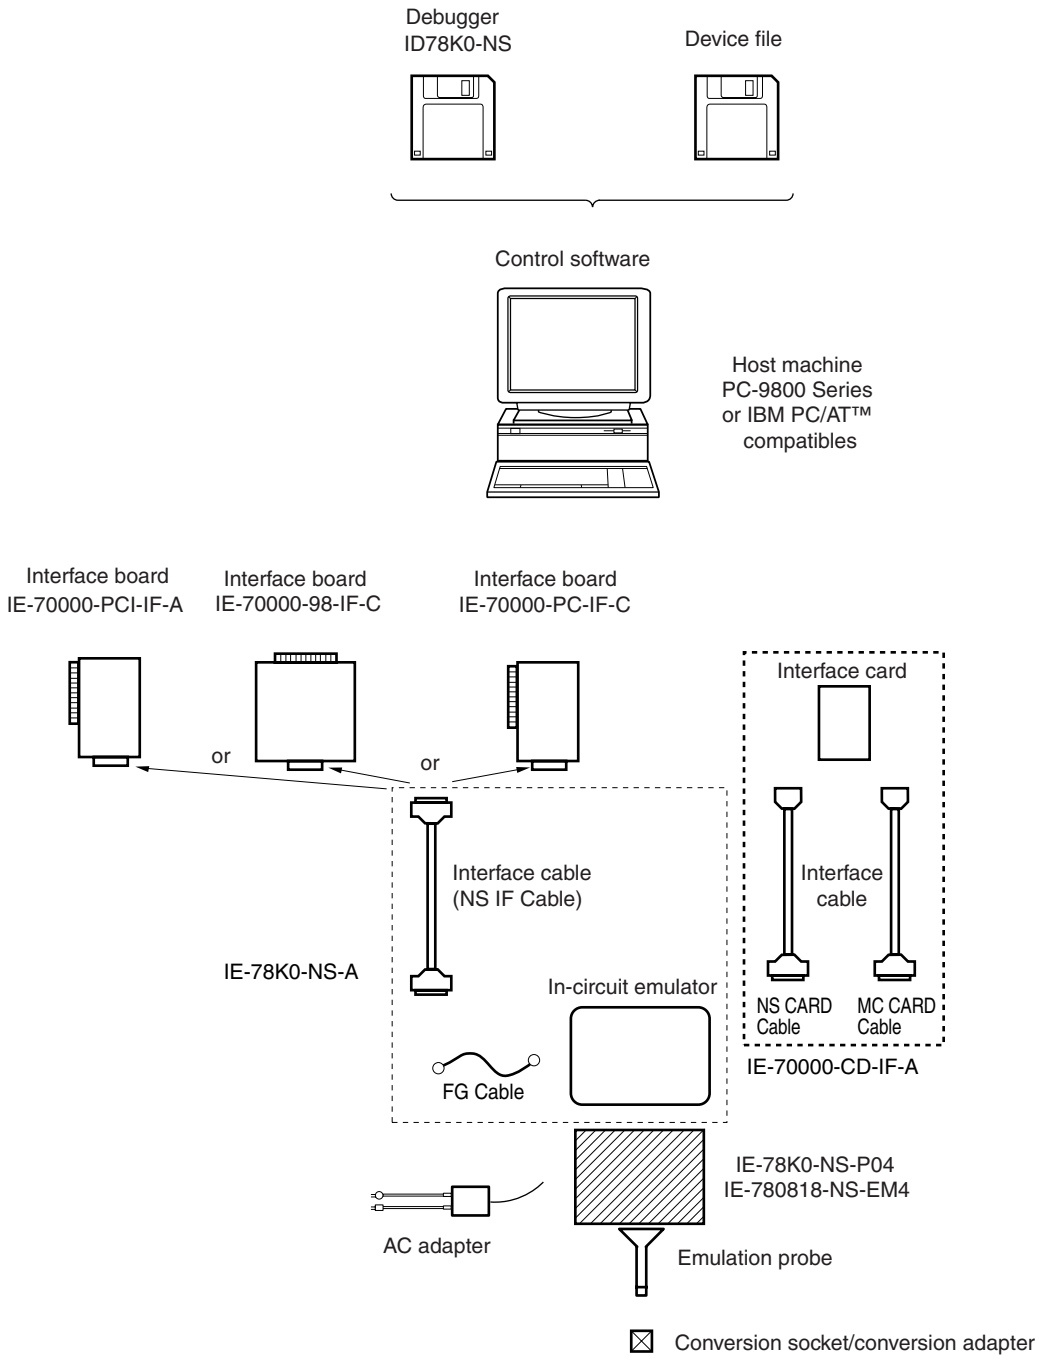
The IE-78K0-NS-P04 and the IE-780818-NS-EM4 are development tools for efficient debugging of hardware or software when using one of the following target devices that belong to the 78K/0 Series of 8-bit single-chip microcontrollers.
This chapter describes the emulation board's and probe board's system configuration and basic specifications.

- Target device
  - μPD780816(A) Subseries

1.1 System Configuration

Figure 1-1 illustrates the IE-78K0-NS-P04 / IE-780818-NS-EM4's system configuration.

Figure 1-1: System Configuration



Note: The packages, emulation probes, and conversion sockets/conversion adapters are listed below.

Package	Emulation Probe	Conversion Socket/ Conversion Adapter
64-pin plastic QFP (GK - type)	NP-64GK	NQPACK064SB YQPACK064SB HQPACK064SB140 YQSOCKET064SBF

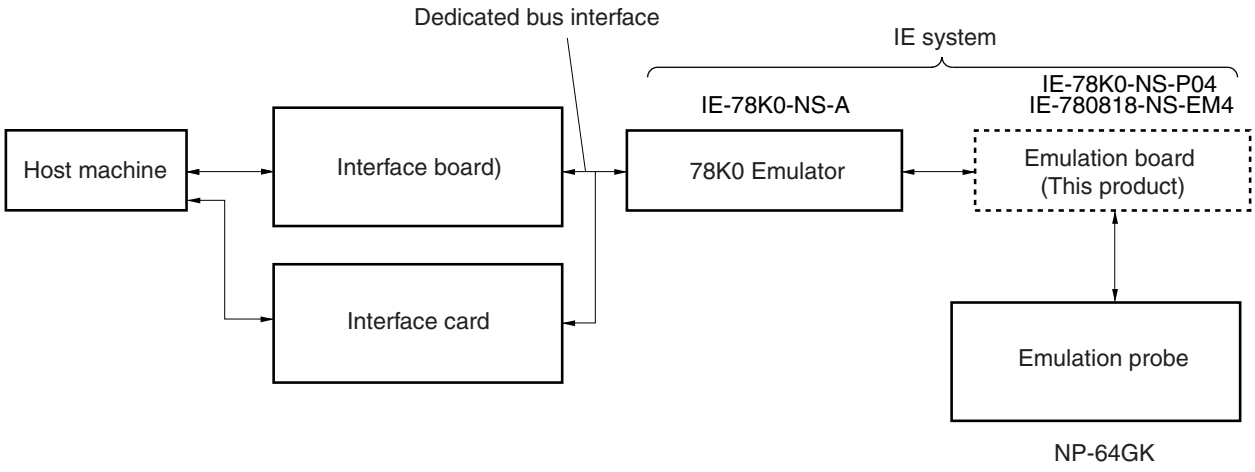
The NP-64GK is a product of Naito Densei Machidaseisakusho Co., Ltd.

The sockets are products of TOKYO ELETECH CORPORATION.

1.2 Hardware Configuration

Figure 1-2 shows the IE-78K0-NS-P04/IE-780818-NS-EM4's position in the basic hardware configuration.

Figure 1-2: Basic Hardware Configuration



1.3 Basic Specifications

The IE-78K0-NS-P04/IE-780818-NS-EM4's basic specifications are listed in Table 1-1.

Table 1-1: Basic Specifications

Parameter	Description
Target device	μPD780816(A) Subseries
System clock	Main system clock: 8.38 MHz Subsystem clock: typical. 32.768 KHz
Clock supply	External: Pulse input Internal: Mounted on emulation board
Voltage support	4.0 to 5.5 V (same as target device)

1.4 Notes on Use of IE-78K0-NS-P04 and IE-780818-NS-EM4

(1) Ensure that the power supply for the IE-78K0-NS-A and the target system is OFF before connecting or disconnecting to/from the IE-78K0-NS-A and the target device, or changing switch settings, etc.

(2) When carrying out target device emulation using the IE-78K0-NS-P04 and IE-780818-NS-EM4 in conjunction with the IE-78K0-NS-A, there are certain differences from the operation of the actual device (see **Differences from Target Device**).

(3) The target system V_{DD} must be between 4.0 V and 5.5 V.

(4) **Power on sequence:**
   1. Power on IE-78K0-NS-A
   2. Power on target hardware
   3. Start debugger ID78K0-NS

(5) **Power off sequence:**
   1. Exit from debugger ID78K0-NS
   2. Power off target hardware
   3. Power off IE-78K0-NS-A.

Chapter 2 Part Names

This chapter introduces the parts of the IE-78K0-NS-P04 and the IE-780818-NS-EM4.
The packaging boxes of the IE-78K0-NS-P04 and the IE-780818-NS-EM4 contain the following items:

2.1 Package Components

IE-78K0-NS-P04 Components

The IE-78K0-NS-P04 comprises the following components. Please check that all these items are included in the package.

(1)	IE-78K0-NS-P04	x 1
(2)	Parts holder (with cover)	x 2
(3)	Registration Card	x 1
(4)	Readme First	x 1
(5)	List of Contents	x 1

IE-780818-NS-EM4 Components

The IE-780818-NS-EM4 comprises the following components. Please check that all these items are included in the package.

(1)	IE-780818-NS-EM4	x 1
(2)	Screws Set	x 1
(3)	Registration Card	x 1
(4)	Readme First	x 1
(5)	List of Contents	x 1
(6)	Floppy Disk with Device File and FPGA Data	x 1
(7)	User's Manual (this manual)	x 1

Chapter 3 Installation

This chapter describes the method for the connection of the IE-78K0-NS-P04, the IE-780818-NS-EM4 and the emulation probe.

- Installation of the IE-78K0-NS-P04
- Installation of the IE-780818-NS-EM4
- Installation of the emulation probe
- Setting of the jumpers for the clock selection

The power supply of the IE-78K0-NS-A and the target system must be switched off when connecting or disconnecting any item.

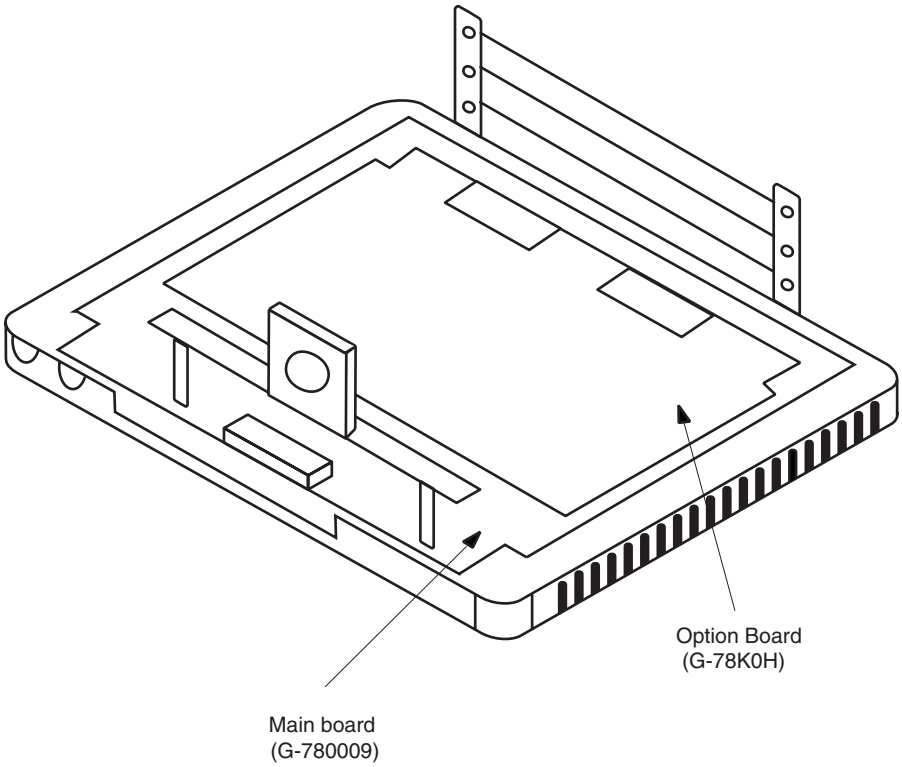
Caution: Usage of incorrect connection methods may damage the IE system.

3.1 Installation Procedure

<1> Remove the 4 screws at the sides of the IE-78K0-NS-A and open the top of the cover.

<2> Remove the screws on the option board (G-78K0H) and remove the option board.

Figure 3-1: IE-78K0-NS-A inside



<3> Setup the jumper's on the **main board** (G-780009).
It is necessary to set some jumpers on the main board for the clock selection. An example for the jumper setting will be given in the chapter clock setting.

3.2 Clock Settings

3.2.1 Overview of clock settings

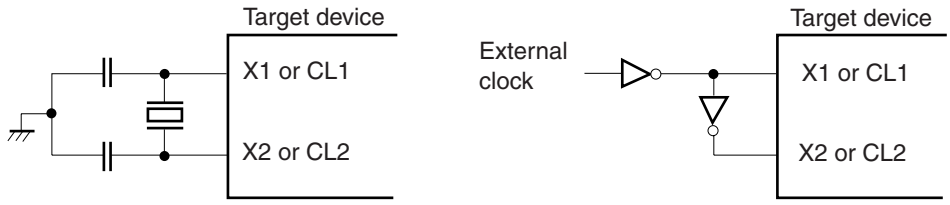
Main system clock

Select from (1) to (3) below as the main system clock and subsystem clock to be used during debugging.

(1) Clock that is already mounted on emulation board
(2) Clock that is mounted by user
(3) External clock

If the target system includes an internal clock, select either "(1) Clock that is already mounted on emulation board" or "(2) Clock that is mounted by user". An internal clock connects the target device to an oscillator and uses the target device's internal oscillation circuit. An example of an external circuit is shown in part (a) of Figure 3-5. During emulation, the oscillator that is mounted on the target system is not used. Instead, it uses the clock that is mounted on the emulation board which is installed for the IE-78K0-NS-A.
If the target system includes an external clock, select "(3) External clock".
An external clock supplies a clock signal from outside of the target device and does not use the target device's internal oscillation circuit. An example of an external circuit is shown in part (b) of Figure 3-5.

Figure 3-5: External Circuits Used as System Clock Oscillation Circuit

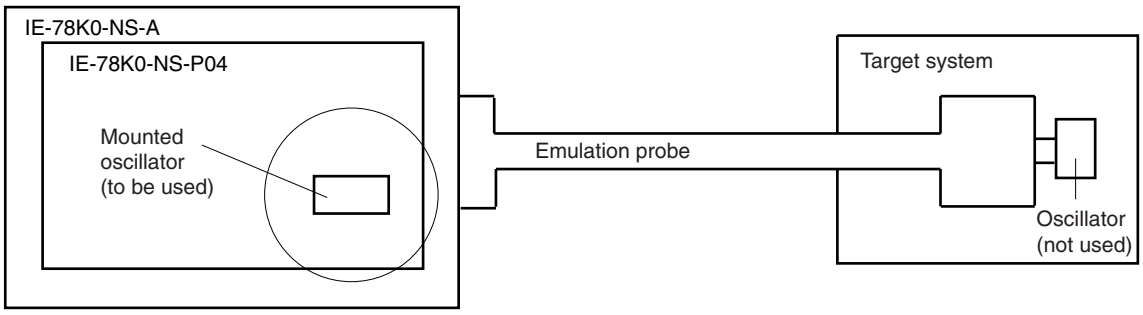


3.2.2 Main System Clock Selections

(1) Clock that is already mounted on emulation board

A crystal resonator is already mounted on the emulation board. Its frequency is 8.0000 MHz.

Figure 3-6: When Using Clock That Is Already Mounted on Emulation Board

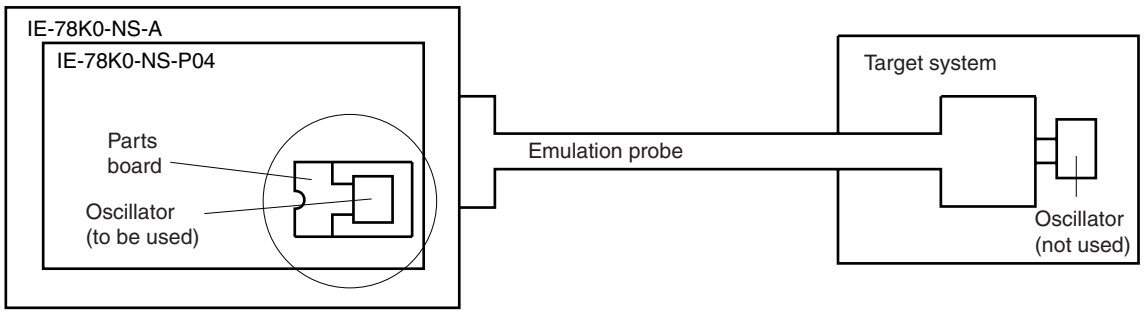


Remark: The clock that is supplied by the IE-78K0-NS-P04 oscillator (encircled in the figure) is used.

(2) Clock that is mounted by user

The user is able to mount any clock supported by the set specifications on the IE-78K0-NS-P04. First mount the oscillator on the parts holder, then attach the parts board to the IE-78K0-NS-P04. This method is useful when using a different frequency from that of the pre-mounted clock.

Figure 3-7: When Using User-mounted Clock

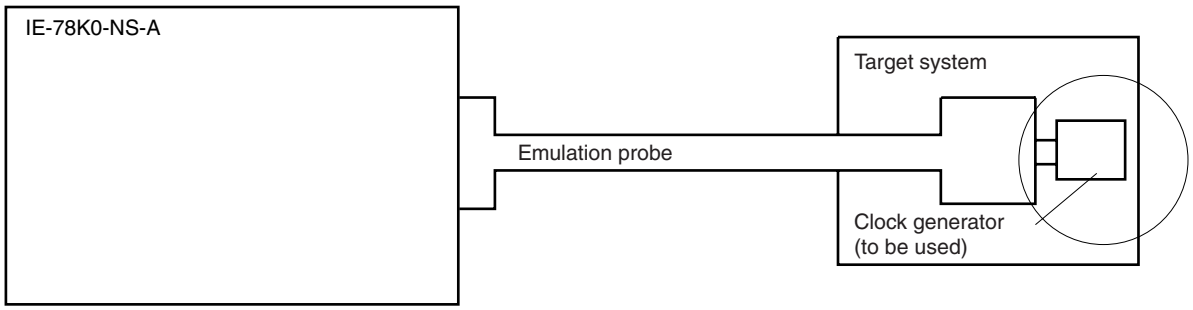


Remark: The clock that is supplied by the IE-78K0-NS-P04 oscillator (encircled in the figure) is used.

(3) External clock

An external clock connected to the target system can be used via the emulation probe.

Figure 3-8: When Using an External Clock



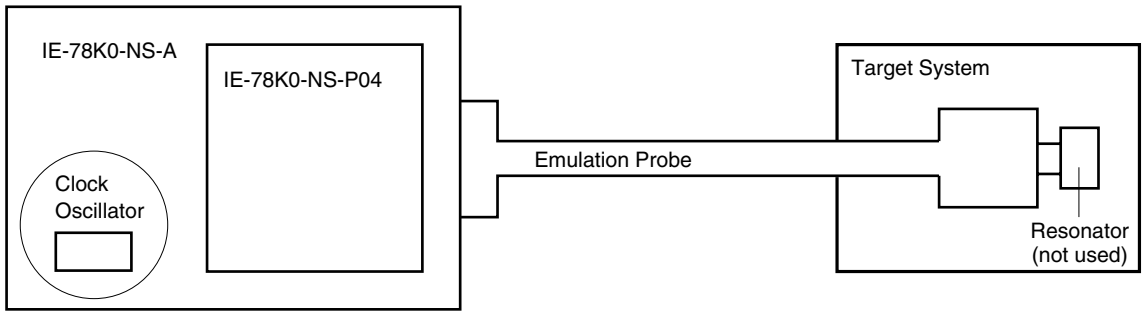
Remark: The clock supplied by the target system's clock generator (encircled in the figure) is used.

3.2.3 Subsystem Clock Selections

(1) Standard clock offered by the main board

A crystal oscillator is already mounted on the main board. The frequency is 32.768 kHz.

Figure 3-9: When Using Standard Clock Mounted on Main Board

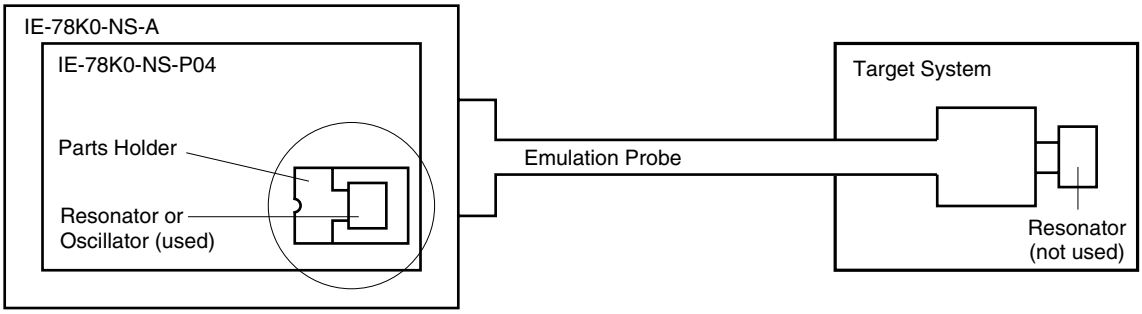


Remark: The clock supplied from the oscillator on the Main Board (G-78009) (circled) is used.

(2) Clock mounted by user on the emulation board

A clock that matches the specifications set by the user can be mounted on the IE-78K0-NS-P04. The resonator or oscillator to be used is mounted on a parts holder and that parts holder is installed on the IE-78K0-NS-P04. This is useful if you want to perform debugging at a different frequency from that of the clock mounted beforehand.

Figure 3-10: When Using Clock Mounted on the Emulation Board

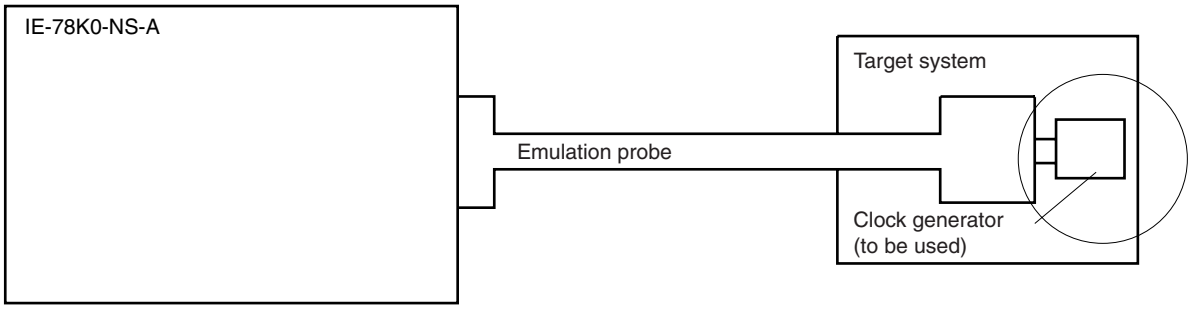


Remark: The clock supplied from the resonator or oscillator on the IE-78K0-NS-P04 (circled) is used.

(3) External clock on the target hardware

The external clock on the target system can be used via an emulation probe.

Figure 3-11: Using an External Clock mounted on the Target Hardware



Remark: The clock supplied by the clock generator circuit (circled in the above figure) is used.

3.2.4 Main system clock settings

Table 3-20: Main System Clock Settings

Frequency of Main System Clock		IE-78K0-NS-P04	CPU Clock Source Selection (ID)
When using clock that is already mounted on emulation board	8.00 MHz	Shortcut 6-8	Internal
When using clock mounted by user	Other than 8.00 MHz	Includes oscillator circuit	External
When using external clock		Shortcut 6-8	

Caution: When using an an user defined clock or external clock, open the configuration dialog when starting the integrated debugger (ID78K0-NS) and select "External" in the area (Clock) for selecting the CPU's clock source (this selects the user's clock).

Remark: The IE-78K0-NS-P04 factory settings are those listed above under "when using clock that is already mounted on emulation board".

(1) When using clock that is already mounted on emulation board

When the IE-78K0-NS-P04 is shipped, an 8.00-MHz crystal resonator is already mounted in the IE-78K0-NS-P04 X4 socket. When using the factory-set mode settings, there is no need to make any other hardware settings.

When starting the integrated debugger (ID78K0-NS), open the configuration dialog and select "Internal" in the area (Clock) for selecting the CPU's clock source (this selects the emulator's internal clock).

(2) When using clock mounted by user

The settings described under either (a) or (b) are required, depending on the type of clock to be used. When starting the integrated debugger (ID78K0-NS), open the configuration dialog and select "External" in the area (Clock) for selecting the CPU's clock source (this selects the emulator's internal clock).

(a) When using a ceramic oscillator or crystal resonator

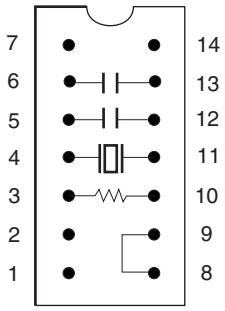
- Items to be prepared
  - Parts holder (supplied with IE-78K0-NS-P04)
  - Ceramic oscillator or crystal resonator
  - Resistor Rx
  - · Capacitor CA
  - · Capacitor CB
  - · Solder kit

<Steps>

<1> Solder onto the supplied parts board (as shown below) the target ceramic oscillator or crystal resonator, resistor Rx, capacitor CA, and capacitor CB (all with suitable oscillation frequency).

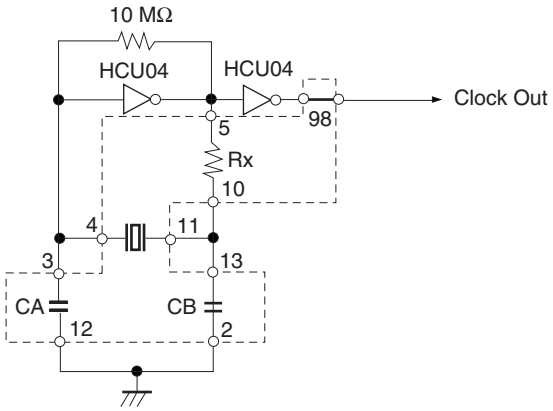
Figure 3-12: Connections on Parts Board (When Using Main System Clock or User-Mounted Clock)

Parts holder



Pin No.	Connection
2-13	Capacitor CB
3-12	Capacitor CA
4-11	Ceramic oscillator or crystal resonator
5-10	Resistor Rx
8-9	Short

Circuit diagram

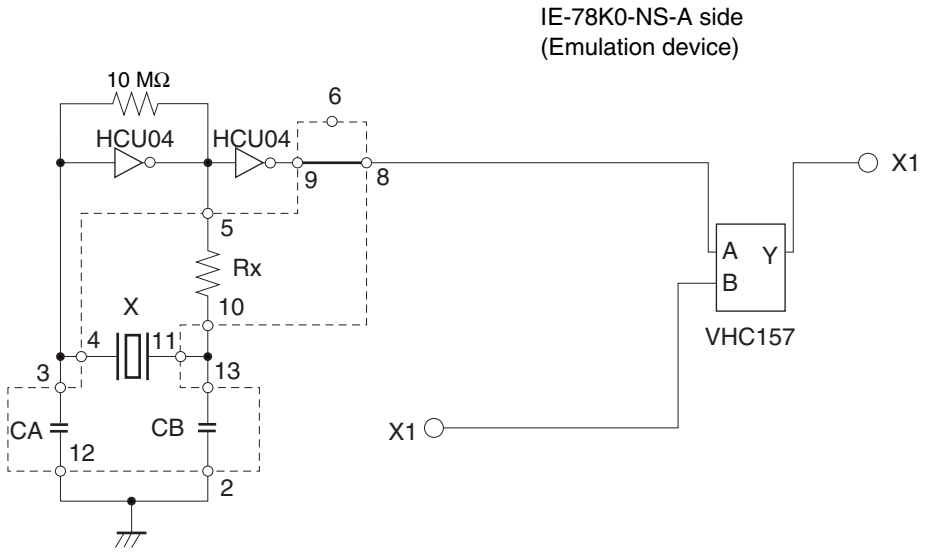


Remark: The sections enclosed in broken lines indicate parts that are attached to the parts board.

<2> Prepare the IE-78K0-NS-P04.
<3> Remove the parts holder inserted in the socket (marked "X2") on the IE-78K0-NS-P04.
<4> Connect the parts holder (from <1> above) to the socket (X2) from which the part holder was removed. Check the pin 1 mark to make sure the board is mounted in the correct direction.
<5> Make sure that the parts board mounted in the X2 socket on the emulation board is wired as shown in Figure 3-10 above.
<6> Install the IE-78K0-NS-P04 and the IE-780818-NS-EM4 in the IE-78K0-NS-A.

The above steps configure a circuit and enable clock output to be supplied from the mounted oscillator to the emulation device.

Figure 3-13: IE-78K0-NS-A side (Emulation Device)

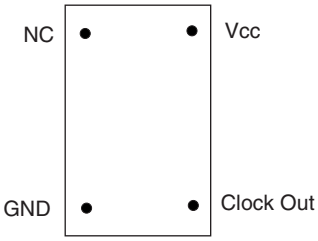


Remark: The sections enclosed in broken lines indicate parts that are attached to the parts holder.

(b) When using a crystal oscillator

- Items to be prepared
- Crystal oscillator (see pinouts shown in Figure 3-15)

Figure 3-14: Crystal Oscillator (When Using Main System Clock or User-mounted Clock)



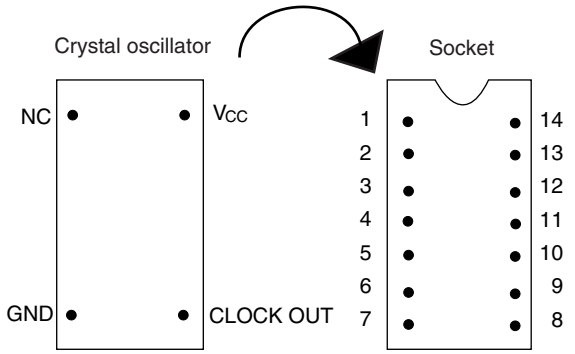
<Steps>

<1> Prepare the IE-78K0-NS-P04.

<2> Remove the parts holder inserted in the socket (marked “X2”) on the IE-78K0-NS-P04.

<3> Connect the parts board (from <2> above) to the socket (X2) from which the parts holder was removed. Insert the crystal oscillator into the socket so as to align the pins as shown in the figure below.

Figure 3-15: Pin Alignment of Crystal Oscillator and Socket

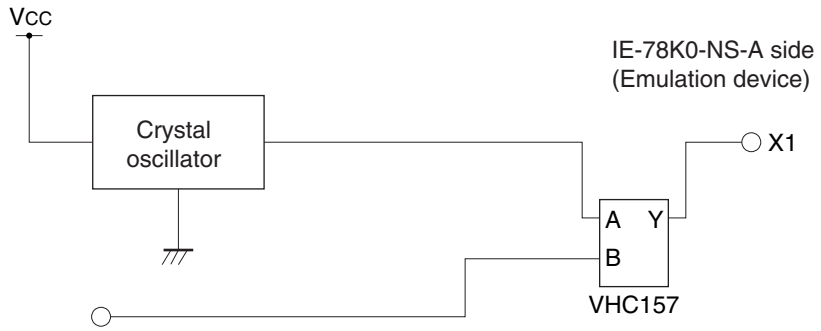


Crystal Oscillator Pin Name	Socket Pin No.
NC	1
GND	7
CLOCK OUT	8
V_{CC}	14

<4> Install the IE-78K0-NS-P04 and the IE-780818-NS-EM4 in the IE-78K0-NS-A.

The above steps configure a circuit and enable clock output to be supplied from the mounted oscillator to the emulation device.

Figure 3-16: IE-78K0-NS-A side (Emulation Device)



(3) When using an external clock

No hardware settings are required for this situation.

Make sure that the parts holder with a shortcut between 6 and 8 is in the socket (marked "X2").

When starting the integrated debugger (ID78K0-NS), open the configuration dialog and select “External” in the area (Clock) for selecting the CPU’s clock source (this selects the user’s clock).

3.2.5 Examples of Main System Clock Setting

(1) Standard Clock 8.00 MHz offered by the Emulation Board (IE-78K0-NS-P04)

Main Board:	JP6 - (3-4)
	JP7 - (1-2)
Emulation Board:	X2 with shortcut between 6 - 8
ID78K0-NS:	Internal

(2) Clock mounted by the User on the Emulation Board

- User related Clock

Main Board:	JP6 - (3-4)
	JP7 - (1-2)
Emulation Board:	X2 with parts holder and crystal resonator, ceramic resonator or crystal oscillator
ID78K0-NS:	External

(3) External Clock on the Target Hardware

Main Board:	JP6 - (3-4)
	JP7 - (1-2)
Emulation Board:	X2 with shortcut between 6 - 8
ID78K0-NS:	External

3.3 Subsystem Clock

3.3.1 Subsystem Clock Setting

Table 3-21: Subsystem Clock Settings

Subsystem Clock Frequency to be Used		IE-78K0-NS-P04	IE-78K0-NS-A
		Parts holder (X1)	JP8
When using clock that is already mounted on main board	32.768 KHz	Short 6 - 8	Short 5 - 6
When using user-mounted clock	Other than 32.768 KHz	Includes oscillator	Short 1 - 2
When using external clock		Not used	Short 3 - 4

Caution: Jumper JP8, which is used to select the board's clock or an external clock, should be set only after turning off the IE-78K0-NS-A's power.

(1) When using clock that is already mounted on main board

When the IE-78K0-NS-P04 / IE-780818-NS-EM4 are shipped, there is no 32.768 KHz crystal on the board. The parts holder on X1 is shortened between 6 and 8. Short pins 5 and 6 of the IE-78K0-NS-A's main board to use the 32.768 KHz crystal of the emulator. There is no additional settings of the integrated debugger ID78K0-NS necessary.

(2) When using the user-mounted clock on the IE-78K0-NS-P04

The settings described under either (a) or (b) are required, depending on the type of clock to be used.
Short pins 1 and 2 on the IE-78K0-NS-A's jumper (JP8).
There is no need to make any other settings via the integrated debugger (ID78K0-NS).

(a) When using a ceramic oscillator or crystal resonator

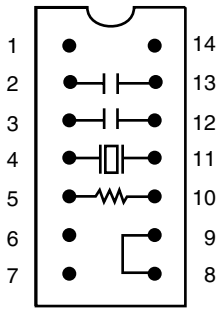
- Items to be prepared
  - Parts board (supplied with IE-78K0-NS)
  - Ceramic oscillator or crystal resonator
  - Resistor Rx
  - Capacitor CA
  - Capacitor CB
  - Solder kit

<Steps>

<1> Solder onto the supplied parts board (as shown below) the target ceramic oscillator or crystal resonator, resistor Rx, capacitor CA, and capacitor CB (all with suitable oscillation frequency).

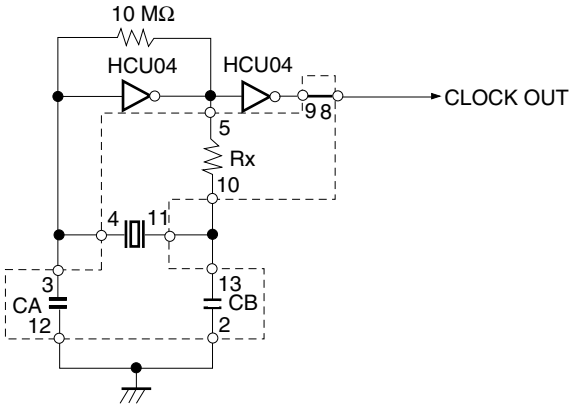
Figure 3-17: Connections on Parts Board
(When Using Subsystem Clock or User-Mounted Clock)

Parts holder (X1 of IE-78K0-NS-P04)



Pin No.	Connection
2-13	Capacitor CB
3-12	Capacitor CA
4-11	Ceramic oscillator or crystal resonator
5-10	Resistor Rx
8-9	Short

Circuit diagram

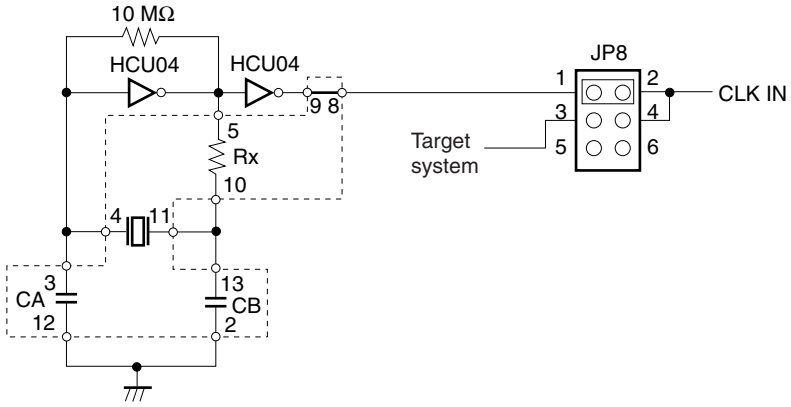


Remark: The sections enclosed in broken lines indicate parts that are attached to the parts board.

<2> Prepare the IE-78K0-NS-P04.
<3> Remove the crystal oscillator that is mounted in the IE-78K0-NS-P04's socket (the socket marked as "X1").
<4> Connect the parts board (from <1> above) to the socket (X1) from which the crystal oscillator was removed (see <3> above). Check the pin 1 mark to make sure the board is mounted in the correct direction.
<5> Install the IE-78K0-NS-P04 and the IE-780818-NS-EM4 in the IE-78K0-NS-A.

The above steps configure a circuit and enable clock output to be supplied from the mounted oscillator to the emulation device.

Figure 3-18: IE-78K0-NS-A side

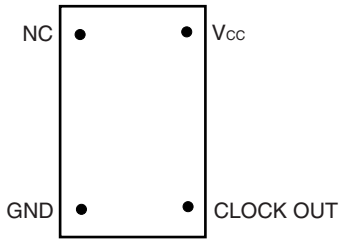


Remark: The section enclosed in broken lines indicates parts that are attached to the parts board.

(b) When using a crystal oscillator

- Items to be prepared
- Crystal oscillator (see pinouts shown in Figure 3-20)

Figure 3-19: Crystal Oscillator (When Using Subsystem Clock or User-mounted Clock)

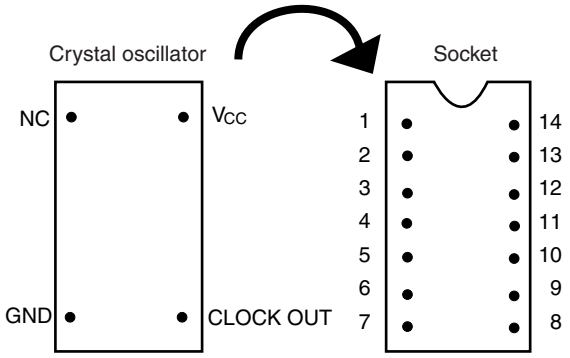


<Steps>

<1> Prepare the IE-78K0-NS-P04.

<2> Remove the crystal oscillator that is mounted in the IE-78K0-NS-P04's socket (the socket marked as "X1").

<3> Connect the parts board (from <2> above) to the socket (X1) from which the crystal oscillator was removed. Insert the crystal oscillator into the socket so as to align the pins as shown below.

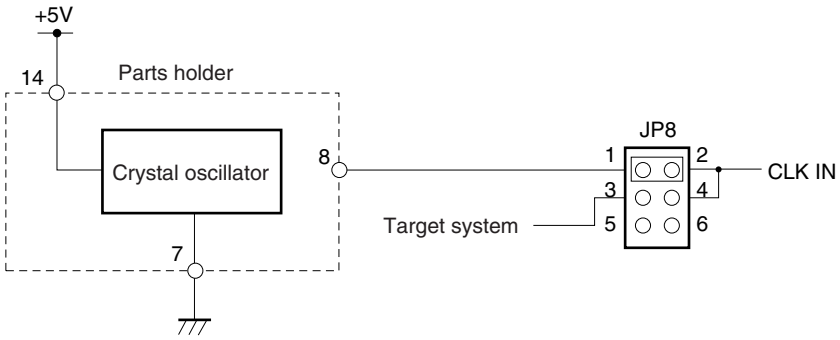


Crystal Oscillator Pin Name	Socket Pin No.
NC	1
GND	7
CLOCK OUT	8
V_{CC}	14

<4> Install the IE-78K0-NS-P04 and the IE-780818-NS-EM4 in the IE-78K0-NS-A.

The above steps configure a circuit and enable clock output to be supplied from the mounted oscillator to the emulation device.

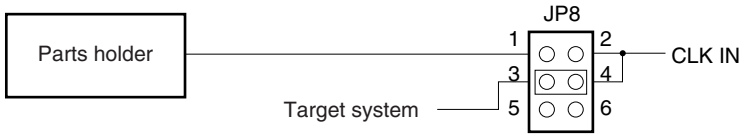
Figure 3-20: IE-78K0-NS-A side



(3) When using an external clock

Short pins 3 and 4 on the IE-78K0-NS-A's jumper (JP8). There is no need to make any settings via the integrated debugger (ID78K0-NS).

Figure 3-21: IE-78K0-NS-A side



3.3.2 Examples of Subsystem Clock Setting

(1) Standard Clock 32.768 KHz offered by the Main Board (G-780009)

Main Board: JP8 - (5-6)
Emulation Board (IE-78K0-NS-P04): X1 with shortcut between 6 - 8
ID78K0-NS: don't care

(2) Clock mounted by the User on the Emulation Board

Main Board: JP8 - (1-2)
Emulation Board (IE-78K0-NS-P04): X1 with oscillation circuit
ID78K0-NS: don't care

(3) External Clock on the Target Hardware

Main Board: JP8 - (3-4)
Emulation Board (IE-78K0-NS-P04): X1 with shortcut between 6 - 8
ID78K0-NS: don't care

3.4 Jumper Settings

When using the IE-78K0-NS-P04 and the IE-780818-NS-EM4, set the jumpers as shown below.

Table 3-22: Jumper Settings on IE-78K0-NS-A

	JP2	JP3	JP4	JP6	JP7	JP8
Short	2-3	1-2	1-2	3-4	1-2	5-6

Table 3-23: Jumper Settings on IE-78K0-NS-P04

JP1	JP2	JP3	JP4	JP5	JP6	JP7	JP8	JP9
Open	Open	Open	Closed	Open	2-3	1-2	1-2	Open

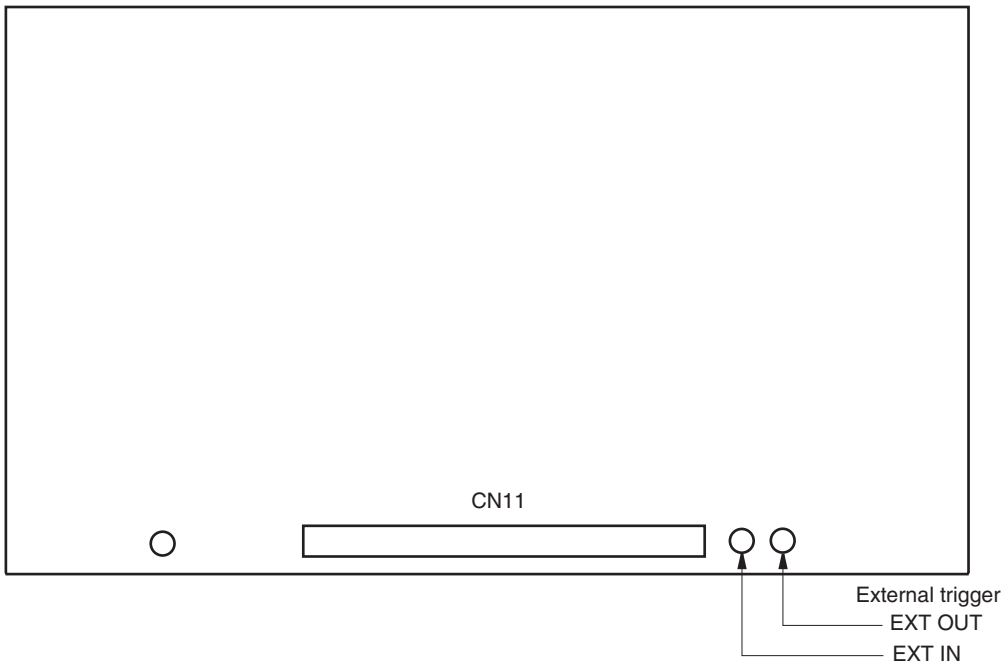
Table 3-24: Jumper Settings on IE-780818-NS-EM4

JP1	JP2	JP3
1-2	2-3	1-2

3.5 External Trigger

To set up an external trigger, connect the IE-780818-NS-EM4's check pin, EXTOUT, and EXTIN as shown below.
See the in-circuit emulator (IE-78K0-NS-A) User's Manual for description of related use methods and pin characteristics.

Figure 3-22: External Trigger Input Position



[Memo]

Chapter 4 Differences among Target Devices and Target Interface Circuits

This chapter describes differences between the target device and the IE-78K0-NS-P04 / IE-780818-NS-EM4 target interface circuit.
Although the target device is a CMOS circuit, the IE-78K0-NS-P04/IE-780818-NS-EM4's target interface circuit consists of an emulation chip, TTL, CMOS-IC, and other components.
When connected the IE system with the target system for debugging, the IE system performs emulation so as to operate as the actual target device would operate on the target system.
However, some minor differences exist since the operations are performed via the IE system's emulation.

4.1 Input/Output Signals

<1> Signal which are input or output from the gate array.

<2> Signals those are input or output from the µPD78P0308.

<3> Signals that are input or output from the µPD780009 emulation CPU

<4> Other signals

The IE system circuit is used as follows for above-mentioned signals.

(1) Signals which are input or output from the gate array

P00 to P03
P10/ANI0 to P17/ANI7
ANI8 to ANI11
P20 to P27
P40 to P47
P50 to P57
P63 to P67
P70, P71
AV_{DD}/AV_{REF}
AV_{SS}
CRxD

(2) Signals those are input or output from the µPD78P0308

None.

(3) Signals that are input or output from the µPD780009 emulation CPU

X1
$\overline{\text{RESET}}$

(4) Other signals

$V_{DD}0$, $V_{DD}1$
$V_{SS}0$, $V_{SS}1$
X2
CTxD
V_{PP}/Test

Figure 4-1: Equivalent Circuit 1 from Emulation Circuit

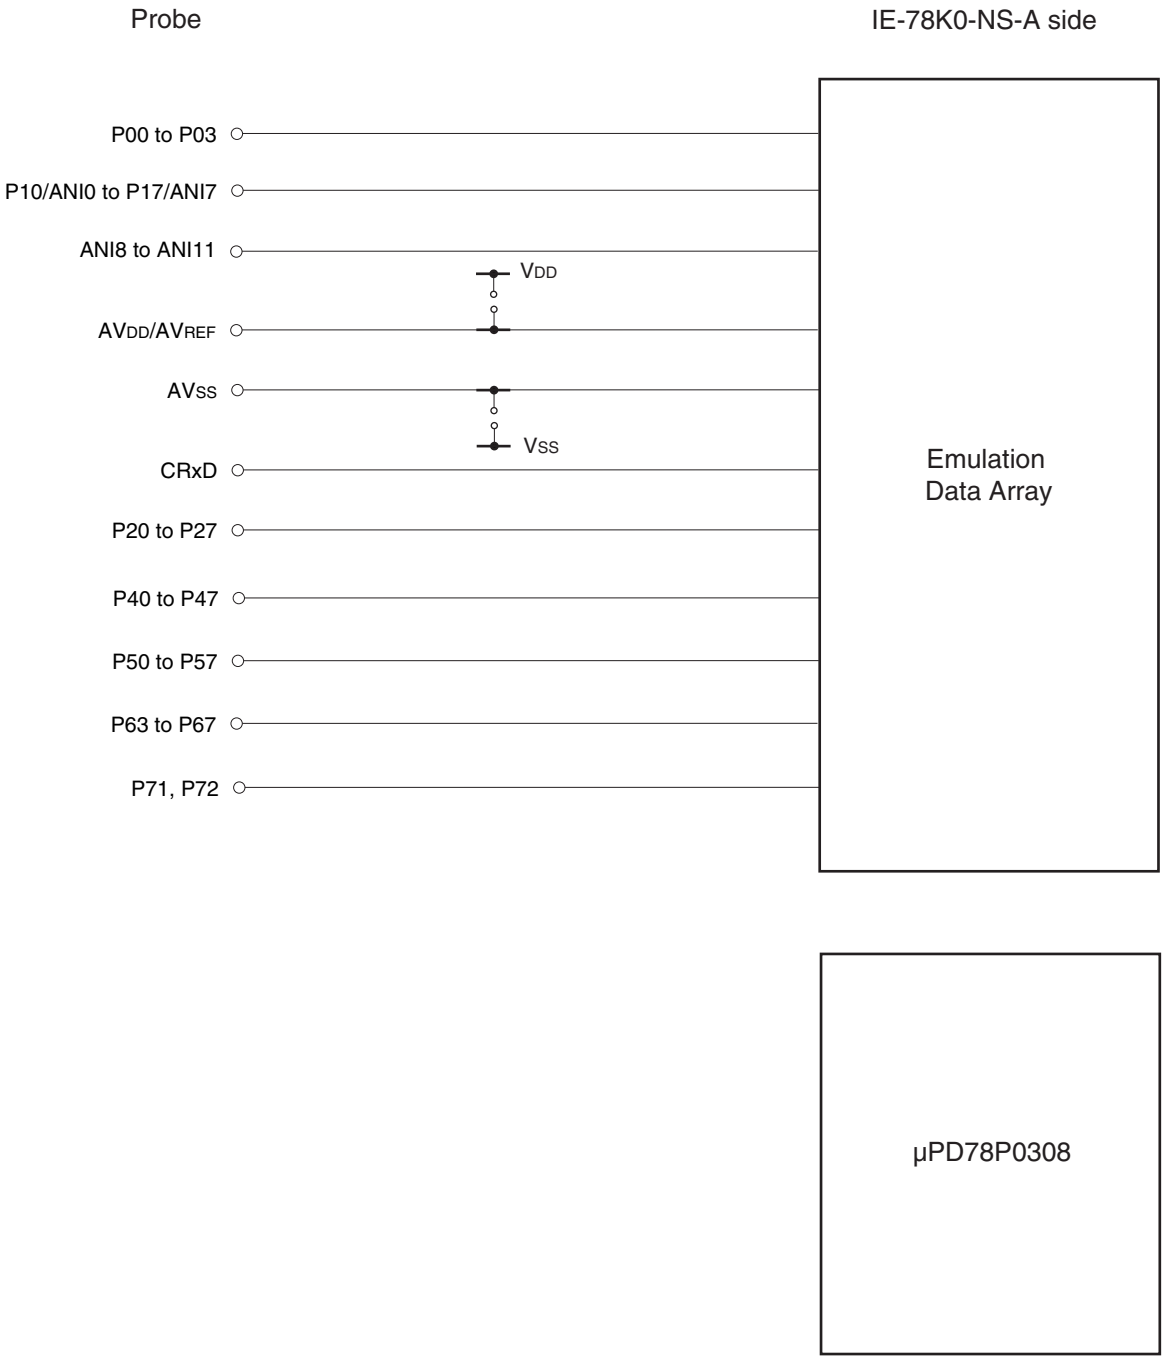


Figure 4-2: Equivalent Circuit 2 from Emulation Circuit

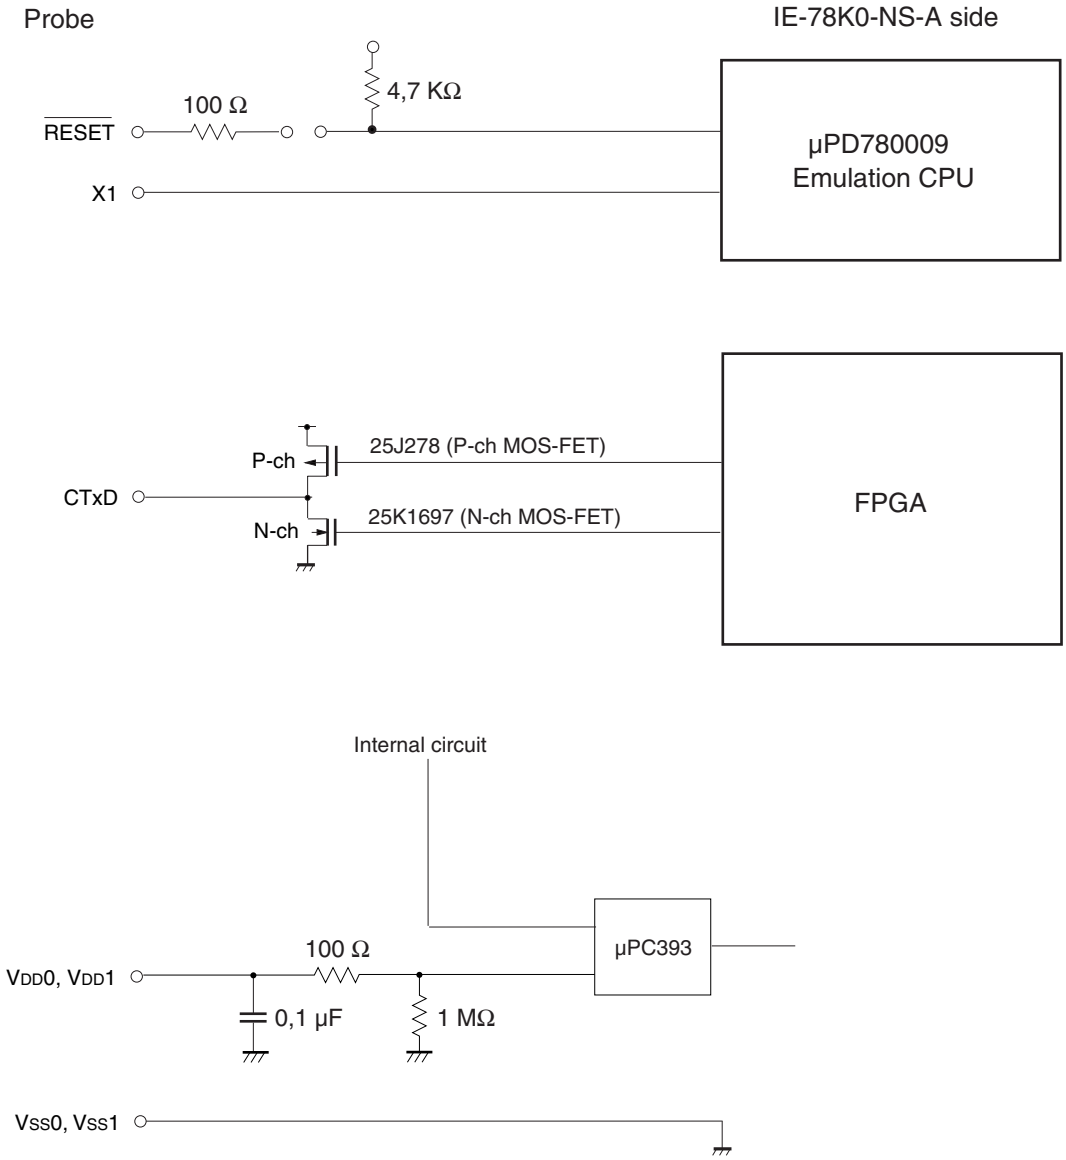

Figure 4-3: Equivalent Circuit 3 from Emulation Circuit

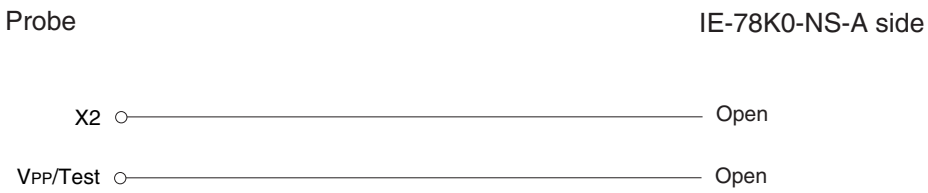


4.2 Differences in Port Functions

1. The subclock has to be build up with a crystal or an oscillator. A RC-combination can not be used.
2. The conversion time of the AD-converter is different to the device (please refer to the Chapter 5 Restrictions).
3. The clock monitor can not be emulated as on the device (please refer to the Chapter 5 Restrictions).

4.3 Differences in SFR-Registers

Caution: The emulator has a register to emulate the powerfail detection which is not existing at the real chip. The name of the register is DAM0 (SFR-Adr: 0xFF9C). This register has to be set to the value 0x01 by the user program.

4.4 Target Interface Circuit

The purpose of the target interface circuit is to have the same operations as the target device performed in the IE-78K0-NS-A. It comprises the emulation device and various dates (CMOS, TTL and othes ICs). When debugging is performed with the target system connected to the IE-78K0-NS-A, the IE-78K0-NS-A target interface circuit performes emulation as though the actual target device were operating in the target system.
The target device has a CMOS LSI configuration. The target interface circuit emulator device also has a CMOS LSI configuration, and is virtually identical to the target device in terms of DC characteristics and AC characteristics (when operating on V_{DD} = 4.0 to 5.5 V).
However, where emulation device signal input/output is performed via gates in the target interface circuit, DC and AC characteristics differ from those of the target device.
In particular, regarding AC characteristics, there is a date delay time (which differs from date to date) each time a gate is passed through.
The above points must be taken into consideration when designing the target system.

Caution: When the IE-78K0-NS-A and IE-78K0-NS-P04 and IE-780818-NS-EM4 are connected to the target system, 4.0 to 5.5 V must be supplied as the target system power supply (V_{DD}).

Chapter 5 Restrictions

1. Starting up the IE system without target board connected makes initial values for ports-indefinite.

2. The RESET value of the CANES register is not correct. As workaround the CANES register has to be reset by software.

3. Power Fail Detector
   It is necessary to set the DAM0 register (dedicated register when the ICE is used).

4. The voltage level of V_{PP} cannot be detected during self-programming. The feedback information bit V_{PP} of the FLPMC register will be always read as 1.

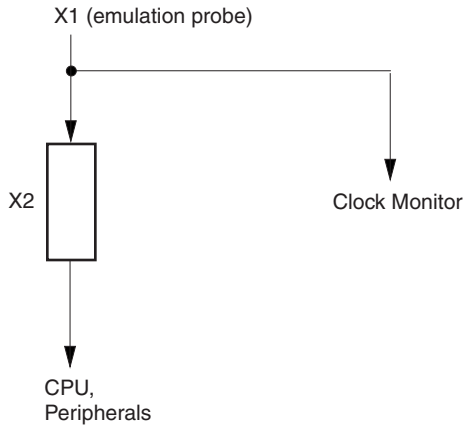
5. AD-Converter
   The conversion time of the AD-Converter is different than on the real device.

Table 5-1: Difference between the Conversion Time

Device	Emulation Tool
144/fx	144/fx
120/fx	120/fx
96/fx	96/fx
72/fx	288/fx
60/fx	240/fx
48/fx	192/fx

6. Clock Monitor
   The clock monitor is implemented in the following way.

Figure 5-1 : Clock Monitor Implementation



When the Clock Monitor shall be used, the clock for the Clock Monitor has to be supplied via the X1 pin of the emulation probe. Due to this it may be necessary to use two separate clock supplies: one for the CPU and the peripherals on the IE-78K0-P04 (socket X2) and the other for the Clock Monitor via the X1 pin of the emulation probe.

[Memo]

Appendix A IE-78K0-NS-P04, IE-780818-NS-EM4 Product Specifications

Product name : IE-78K0-NS-P04, IE-780818-NS-EM4
Operating temperature : 0 to 50 °C
Humidity : 10 to 80% RH (no condensation)
Storage temperature : –15 to +60 °C
Power supply : Power supply capacity : DC 200mA (MAX.) 1.0 W +5 V

Table A-1: Connectors on IE-78K0-NS-P04 Board and IE-780818-NS-EM4 Board

Name	Description (IE-78K0-NS-P04)	Name	Description (IE-780818-NS-EM4)
CN1	Emulator connections	CN5	Emulation board connectors (IE-78K0-NS-P04)
CN2		CN6	
CN3		CN7	
CN4		CN8

Appendix B Conversion Socket Adapter Package Drawings and recommended Board Mounting Pattern

The following sockets and socket adapters are available for the connection of the probe or device:

- Soldering socket : NQPACK064SB
- Probe adapter : YQPACK064SB
- High adapter : YQSOCKET064SBF
- Device Lid : HQPACK064SB140
