1 **INTRODUCTION**

1.1 PRECAUTIONS BEFORE STARTING

: Before commencing work on site, connect to our internet address to update your CPC with the latest version of the Software and Firmware (chapter 3.5).

1.2 TROUBLESHOOTING

• Diagnostic for the LED

At start-up, the LED remains red for 5 seconds, then switches to solid Green.

Green

Status OK.

- No light
 Check power supply.
- Red

Exceed the <u>High torque</u> limit - Power down and power up again. If problem persists contact CLA-VAL. Excess Voltage (Above 32 V).

• Blinking red/green

Calibration was not completed correctly - recalibrate.

Changing a set-point without a command signal with a CPC - USB cable connected

- 1. Calibrate your range.
- 2. Select 'Last position' in loss of signal mode.
- 3. Go to 'Display' tab, select your Milliamp value and tick the check box to activate.

1.3 GENERAL DISCLAIMER

In accordance with our policy of continuous development and improvement, CLA-VAL Europe reserves the right to modify or improve these products at any time without prior notice. CLA-VAL Europe assumes no liability or responsibility for any errors or omissions in the content of this document.

1.4 ENVIRONMENTAL PROTECTION

Help to preserve and protect the environment. Recycle used batteries and accessories.

Continuous 4-20 mA Electronic Actuated Motorized Position Control Valve

1.5 **TYPOGRAPHY**

Throughout this manual, the following typographical conventions and symbols have been adopted to help readability:

- a. "Bold": Menu, command, tab and button.
- b. BOLD ITALIC: Important information.
- c. (1): Number of the reference marks on image.
- d. www.cla-val.ch: Internet address.

f. **L**: Warning!

CLA-VAL Europe

2 **CPC CHARACTERISTICS**

Thank you for purchasing a CLA-VAL CPC. With appropriate care, this CPC will provide accurate and reliable control of your valve for many years. The CPC is built with the latest technology together with very high quality components.

The CPC is a 4-20 mA standalone actuated control which is PC calibrated and able to remotely control any CLA-VAL valve. The pilot setting can be adjusted with a standard 4-20 mA signal. It also incorporates a 4-20 mA position feedback signal to cross check if the requested position is reached.

3 HOW TO USE THE CPC?

3.1 WIRING CONNECTIONS

		Cable 2
Code cable 2	Cable 2 function	Colour
+4-20 mA	Position Feedback	green
Common -	For position feedback & contact security	pink
+4-20 mA-	Set point +	yellow
-4-20 mA	Set point -	grey
Alarm 1	Input low contact relay	brown
Alarm 1	Output low contact relay	blue
Alarm 2	Input high contact relay	orange
Alarm 2	Output high contact relay	white

3.2 CPC TECHNICAL DATA

	Electrical Specifications
Electrical Power:	• 24 VDC, 6 / 10 / 15 rpm / sizes
	300 mA max. load draw
	85 mA stand-by (no load draw)
Power Protection	Max. 32 VDC over voltage
	Max. 1000 mA torque load
	Reverse polarity & short circuit
	80°C stop @ high temperature
Led display:	Green LED
Electrical connection:	2 x Moulded 10 m cables
Input command:	• 4-20 mA (2 wires)
	• 2 x dry contact (contact security)
Input 4-20 mA Protection	Max. 32 VDC over voltage
	Optocoupler isolation @ CMR 1000 V
	(CMR: common mode rejection)
	Insulated (2 wires)
Output feedback:	• 4-20 mA (Output charge $\leq 500 \Omega$)
	 2 x programmable position alarms
Output 4-20 mA Protection	Max. 32 VDC over voltage
	(The input dry contact and 4-20 mA output have the same common or earth but are not individually isolated)
	Other Specifications
Sizes:	GE 50 - 300 / NGE 80 - 400
Operating pressure:	PN 16 bar standard
Operation type:	Continuous Control
Operating temperature range:	-10°C to +80°C
Protection:	IP68 standard allowing full immersion (solenoid, junction box, sensor, not included in IP68)
Interface:	Plug & Play / NT / 2000 / XP / Vista
<u></u>	Default mode
Troubleshooting:	Refer to user manual for LED diagnostics (red-green-blinking)
Remote command failure:	Options available: maintain current position, go to 4 mA position, go to 20 mA position

Continuous 4-20 mA Electronic Actuated Motorized Position Control Valve

3.3 CONNECTION

Output:

LIN040UE-09

Continuous 4-20 mA Electronic Actuated Motorized Position Control Valve

3.4 INSTALLATION INSTRUCTIONS

- 1- The CPC should be mounted in the vertical position. For a position horizontal, please contact CLA-VAL.
- 2- All installation, adjustment and maintenance should be carried out by a competent electrician.
- 3- Do not exceed the maximum ratings given in the specifications and printed on the label.
- 4- The electrical connections should be made as described in the user's manual.
- 5- Before any maintenance operation the main power should be turned off.

lacksquare : Do not attempt to open the product as this will invalidate the warranty!

3.5 SOFTWARE / FIRMWARE UPDATE

For Software updates please visit our web site www.cla-val.ch:

Select "download e-Line", you will find all the latest Software (PC) & Firmware (internal software) updates. Just click on the logo to download automatically.

All the software is multi-language, only the install Software is in French or English.

Continuous 4-20 mA Electronic Actuated Motorized Position Control Valve

3.6 FIRMWARE UPDATE (INTERNAL SOFTWARE)

Sefore the Firmware update, save program on your PC.

- 1- Connect the USB wire to the USB connection of your PC.
- 2- Connect the CPC to the USB wire.
- 3- Select "Read Parameters" to read CPC settings and record output parameters.
- 4- Select "Firmware update" in "Parameters".
- 5- Open the corresponding ".hex" file.
- 6- Select "Read Parameters" to check that the Firmware is updated.

3.7 USB DRIVER INSTALLATION

When you connect the CPC cable for the first time, your PC will detect it and request a driver.

Hardware Update Wizard		
	Welcome to the Hardware Update Wizard	
	This wizard helps you install software for	
	USB Device	
	If your hardware came with an installation CD or floppy disk, insert it now.	
	What do you want the wizard to do?	
	C Install the software automatically (Recommended)	
	Install from a list or specific location (Advanced)	
	Click Next to continue	
	Clima Next> Cancel	Windows 1

- a. Select "Cancel".
- b. Install the "Multi-USB driver setup" software on your PC (you can download this software from the internet <u>www.cla-val.ch</u>).
- c. When you see this message below, select "Continue Anyway".

Installation of the USB driver is now finished.

3.8 UPDATE USB DRIVER OR INSTALL ON ANOTHER PORT

To update your USB driver, please follow procedure below. Install the software «Multi-USB Driver Setup» download from our web site <u>www.cla-val.ch</u>.

Connect your USB cable to your PC.

a. Select: "Install from a list or specific location".

b. Browse to file: C\Program Files\CLA-VAL\Multi-USB Driver Setup.

c. Microsoft validation press "Continue Anyway"

4 ► HOW TO CALIBRATE THE CPC?

4.1 DISPLAY

LIN040UE-01

Connect your PC to the CPC with the USB cable.

- 1- Start the CPC / e-Drive CLA-VAL Software.
- 2- Selected the CPC in the e-Line list.
- 3- Selected your language and click "Read parameters".
- 4- On the right side the configuration information is displayed. On the top general information including the date of the latest calibration, the average & total working time since the first power up, the number of starts, the serial number, the Firmware version and the maximum and minimum recorded temperature is displayed.
- 5- Click on continuous reading if you would like see the position of CPC, set point (mA) and feedback position (mA and units).
- 6- If you would like to manually change the setting, write your setting and click on "Override Setpoint".

: a- Display configuration text colour is blue by default. If you amend any parameters, the text colour will change to black. To restore text to blue, select "**Read parameters**".

Continuous 4-20 mA Electronic Actuated Motorized Position Control Valve

4.2 STATIC CALIBRATION - FULL RANGE (0% - 100%)

The "Set range" allows calibration in either dynamic or static mode. When you click on folder "Set Range", you see this message below. If you would like to proceed with calibration, click "OK", if not click "Cancel".

4.2.1 0%-100% CALIBRATION MODE WITHOUT SYSTEM PRESSURE

Initial preparation:

This calibration mode is commonly used for either field installations where there is no water in the valve (Valve is naturally closed) or Factory settings.

Remove the plug (see Fig. 1).

Position the orifice coupling until there is no gap (flush) with the stem tube (see Fig. 1), go to chapter 4.2.3.

4.2.2 0%-100% CALIBRATION MODE WITH SYSTEM PRESSURE

Initial preparation:

This calibration mode is for field installations where water pressure is available.

Use necessary means to verify the valve is closed e.g. Flow meter, gauge or by sound then go to chapter 4.2.3.

Continuous 4-20 mA Electronic Actuated Motorized Position Control Valve

4.2.3 0-100% CALIBRATION MODE WITH OR WITHOUT SYSTEM PRESSURE

Select the valve size to be calibrated from the drop down menu (3).

To determine the number of turns required to achieve the complete lift.

Open CPC / e-Drive Software then go to "Set Range" tab and click OK on the menu.

- 1- Select "Static Calibration" Mode and check "CPC Motor" box is checked and select trim size from the drop down menu (3).
- 2- Select units.
- 3- Enter 4 mA value and 20 mA value. Using the "Increase actuator"/ "Decrease actuator" Buttons, adjust the position of the orifice coupling until there is no gap (flush) with the stem tube (See Fig. 1, page 15).
- 4- Turns to low point (1): Enter the number '1'.
- 5- Turns to high point (2): Enter the "Number of turns" value for the valve selected (4).
- 7- Select "Write Set Range" to upload settings to CPC.

Your CPC is calibrated.

Go to chapter 4.5.

CLA-VAL Europe

4.3 CALIBRATION - VARIABLE RANGE

Calibration Mode to a specific process WITH System pressure.

Initial preparation:

This calibration mode is for field installations where water pressure is available and you want to control flow over a specific range of positions.

Now you are in the calibration, please enter the required settings:

CLA-VA	Englis	h	Information Firmware Version Serial N* Last Modification Number of starts Complete working time (s) C//F Max *C//F Max *C/F Min Deadband (mA) Nb: EoC (L/H)	(8) 1.97 90708001 10.09.2009 105 1357 13 32 / 90 22 / 72 0.10 0 / 0	Selected Language->English Display Continuous Reading->No Override Setpoint Activated (mA)->No Set Range CPC Motor->Yes Selected Units->%% 4 mA Output in %->000.0 4 mA Output in %->000.0 20 mA Output in %->100.0 20 mA Output in %->100.0

LIN040UE-03

- 1- Select "Dynamic Calibration" mode and ensure that the "CPC Motor" check box is checked (Enabled).
- 2- Select units.
- 3- Enter the required setting Value at 4 mA point and Value at 20 mA point.
- 4- Look at the position on the display and use the "Increase actuator / Decrease actuator" button, until it reaches the low position point. When the low position point is reached then click on the button "Low point setting".
- 5- Look at the position on the display and use the "Increase actuator / Decrease actuator" button, until it reaches the high position point. When the high position point is reached then click on the button "High point setting".
- 7- When all values have been entered, click on "Write Set Range".

Your calibration is done.

Continuous 4-20 mA Electronic Actuated Motorized Position Control Valve

LIN040UE-04

If you can not physically reach the requested High position point, in this situation you have to follow the extended dynamic calibration mode:

- 4- Look at the position on the display and use the "Increase actuator / Decrease actuator" button, until it reaches the low position point. When the low position point is reached then click on the button "Low point setting".
- 5- Look at the position on the display and use the "Increase actuator / Decrease actuator" button, until it reaches the high position point. When the position does not increase any more then stop the actuator. Decrease the position by a small amount, as soon as you see the display changing stop again.
- 6- Enter the indicated value in the projected calibration window "Attainable high point value" as described above, then click on "High point setting".
- 7- When all values have been entered, click on "Write Set Range".

Your calibration is done.

Continuous 4-20 mA Electronic Actuated Motorized Position Control Valve

4.5 CONFIGURATION

The configuration tab sets the Rotation speed and the Deadband.

• The Rotation speed affects the response time of the valve between set-points.

The default condition is 0 seconds "**On-time**" and 0 seconds "**Off-time**" achieving continuous rotation speed which will vary corresponding to the size of your valve.

Make sure that the values entered are appropriate to your system to minimise potential for surge.

• **Dead band** - The default value is 0.1 mA which may need to be increased depending on the stability of the electrical signal.

Choose the loss of signal mode.

- Go to 4 mA: CPC will default to the 4 mA position (low set point).
- Last position: CPC will maintain the last position.
- Go to 20 mA: CPC will default to the 20 mA position (high set point).

<u>Note</u>: Loss of signal can occur on the SCADA system which generates the 4-20 mA command but at the same time the CPC can stay powered, so it is important to select the right option.

When you have finished your configuration, click on "Write Configuration".

Your CPC is configured.

English Read parameters Exit Read parameters Exit Read parameters Exit	Information (8) 1.9 Firmware Version 90708 Serial N* 90708 Last Modification 10.09, Number of starts 105 Complete working time (s) 1357 Average working time (s) 13 "C/F Max 32 / 7, Deadband (mA) 0.10 Nb. LIN040UE-06

Continuous 4-20 mA Electronic Actuated Motorized Position Control Valve

4.6 ALARMS

The CPC incorporates a LOW and HIGH Alarm with an adjustable hysteresis. Note: The low and High alarm levels are activated within the range:

Example:

10% low alarm = 4 + (10% x 16) = 5.6 mA. 90% High alarm = 4 + (90% x 16) = 18.4 mA.

• Hysteresis:

The calculation is: $4 + (2\% \times 16) = 0.32$ mA. Low alarm hysteresis in this example = 5.6 mA + 0.32 mA = 5.92 mA. High alarm hysteresis in this example = 18.4 mA - 0.32 mA = 18.08 mA.

- 1- Enter the requested percentage, for the alarms and hysteresis.
- 2- Click on "Test" to close or open your contact relay.
- 3- Click on "Write Alarms" (1) once your alarm settings are correct.

Continuous 4-20 mA Electronic Actuated Motorized Position Control Valve

5 SOME TIPS

- a. To generate a calibration report, select "Parameters" and then "Report".
 - Enter a reference number.
 - Click on "Report".

The Software will automatically generate a TXT report file (C:\Program Files\CLA-VAL\e-Drive Setup) including all the calibration settings.

b. To retrofit CPC motor to an existing valve refer to the <<Retrofit Instructions>>.
