1 Introduction

1.1 Welcome to tre3rty 2

Thank you for purchasing the **seydesign tre3rty.rwtheme**. Like the clean lines of a fine automobile tre3rty promises to thrill you with every curve and detail. tre3rty is a delightful, optionally responsive RapidWeaver theme, full of powerful features, finesse and a designers touch. tre3rty or utilizes such open-source technologies as SS3, SmartNav, SmartLayout, Social Links, Font Awesome and ExtraContent. Built on a solid and proven framework, tre3rty is sure to deliver solid performance and exceed expectation.

1.2 The Opening Act

In the next few pages you will learn how to install, use and customize your theme. While much of what you will learn here is common to most RapidWeaver themes, keep in mind that features found in some themes may not be found in this theme and vice versa.

Also be aware that RapidWeaver itself is a vast program with many features. I will only cover the features that pertain specifically to this theme and I will assume that you have a certain level of basic understanding when it comes to the RapidWeaver application. As such, it is highly recommended that you take

the time to become familiar with the basic operation of RapidWeaver before delving any deeper into this, or any other theme.

Some areas of the RapidWaver application worth reading up on are:

- The Page Inspector
- Nested navigation
- Adding a logo
- Setting a Title and Slogan
- Enabling breadcrumbs
- Color selection

For more on these topics, visit the [RapidWeaver manual pages](#).

1.3 Getting Help

If you run into any trouble, community support is just a click away at <http://seydesign.com/group>.

2 The Basics

2.1 Installation

To install a RapidWeaver Theme you must first have the RapidWeaver application installed on your Mac operating system. RapidWeaver is available on the [Mac App Store](#). Once RapidWeaver is installed, simply double-click on the “seydesign tre3rty.rwtheme” file and RapidWeaver will install the theme for you.

Now that you have installed your theme, you are ready to put it to good use. Whether you are just getting started with your latest RapidWeaver project or are looking for a new design for an existing project, selecting a new theme is easy:

1. Simply open the RapidWeaver Theme Drawer (View > Show Themes),
2. start typing the theme name in the search box,
3. and select the theme icon when it appears.

2.2 Options

tre3rty has a lot of features built-in, so take the time to look around the Styles menu (View > Show Page Inspector > Styles) to familiarize yourself with them. Try selecting various options and see what effect it has in preview mode. Some

options may not appear to do anything at all at first as they may rely on certain special features, such as Social Links or ExtraContent. Or it might also be a case where the current view already meets the minimum requirements set by options such as Minimum Width.

2.2.1 Device Simulator

Enables device simulation, such as iPhone and iPad, to give you an idea of how your site might look on these devices. This is for development purposes only, as the feature does not work well outside of RapidWeaver. The views are only approximations and should not be taken as fully accurate.

In the Style settings, you can choose which device is shown by default while working on your layout. Each time RapidWeaver loads the preview, this will be the device that is shown first. However, after the preview has loaded you can use the drop menu on the page to switch to other views faster.

- Off - *[Default]*
- iPhone 5
- iPhone 4
- Android
- iPad
- Kindle

2.2.2 Responsive Behavior

Turns the built-in responsive features either on or off. Normal would represent normal desktop web development while responsive would apply to sites that you want to render effectively across all screens, from desktop to smart phone.

- Normal - *[Default]*
- Responsive

2.2.3 Maximum Width

Sets the maximum width that your layout will scale to when the viewport (window) size increases. Since the theme is fully responsive, this only limits its maximum width, not its minimum width.

- 768px
- 960px
- 1024px - *[Default]*
- 1280px

- Full Width - Scales according to the viewport size and always occupies the full width.

2.2.4 Titlebar Options

A collection of color settings that pertain to the title bar area of the theme.

- Background (Titlebar) - *[Color]*
- Border (Titlebar) - *[Color]*
- Site Title - *[Color]*
- Site Slogan - *[Color]*

2.2.5 Navigation Options

A collection of colors and type options that pertain to each of the three navigation areas of the theme. With regard to navigation types, you can choose a system that is broken up into as many as three hierarchical parts for maximum architectural control.

- Background (Top Menu) - *[Color]*
- Border (Top Menu) - *[Color]*
- Text (Top Menu) - *[Color]*
- Current (Top Menu) - *[Color]*
- Background (Sub Menu) - *[Color]*
- Border (Sub Menu) - *[Color]*
- Text (Sub Menu) - *[Color]*
- Current (Sub Menu) - *[Color]*
- Button (Vertical/Responsive Menu) - *[Color]*
- Border (Vertical/Responsive Menu) - *[Color]*
- Text (Vertical/Responsive Menu) - *[Color]*
- Current (Vertical/Responsive Menu) - *[Color]*
- Background (Responsive Menu) - *[Color]*
- Text (Responsive Menu) - *[Color]*
- 3 tier - *[Type]* *[Default]*
- 2 tier (a) - *[Type]*
- 2 tier (b) - *[Type]*
- Vertical - *[Type]*
- Hide - *[Type]*

2.2.6 Main Content Options

A collection of colors and background tile options pertaining to the main content area.

- Background (outer) - *[Color]*
- Background (inner) - *[Color]*
- Border - *[Color]*
- Text - *[Color]*
- Link - *[Color]*
- No Tile (Main Content) - *[Tile]* *[Default]*
- Blueprint - *[Tile]*
- Chalk - *[Tile]*
- Diagonal - *[Tile]*
- Dotted - *[Tile]*
- Horizontal - *[Tile]*
- Linen - *[Tile]*
- Metal grid - *[Tile]*
- Noise - *[Tile]*
- Stone - *[Tile]*
- Square - *[Tile]*
- Vertical - *[Tile]*
- Wood - *[Tile]*
- Carbon Fiber (Solid) - *[Tile]*
- Grid (Solid) - *[Tile]*
- Noise (Solid) - *[Tile]*
- Pixels (Solid) - *[Tile]*
- Wood (Solid) - *[Tile]*

2.2.7 Sidebar Options

A collection of color, width and position options pertaining to the sidebar area.

- Background - *[Color]*
- Text - *[Color]*
- Link - *[Color]*
- Social Links - *[Color]*
- Narrow (right) - *[Width/Position]*
- Narrow (left) - *[Width/Position]*
- Normal (right) - *[Width/Position]* *[Default]*
- Normal (left) - *[Width/Position]*
- Medium (right) - *[Width/Position]*
- Medium (left) - *[Width/Position]*
- Wide (right) - *[Width/Position]*
- Wide (left) - *[Width/Position]*
- Hide - *[Width/Position]*

2.2.8 Top Options

A collection of color and background tile options that pertain to the top area that lies behind the header, ExtraContent 1 and 2 and the sub navigation.

- Background - *[Color]*
- No Tile (Top) - *[Tile]* *[Default]*
- Blueprint - *[Tile]*
- Chalk - *[Tile]*
- Diagonal - *[Tile]*
- Dotted - *[Tile]*
- Horizontal - *[Tile]*
- Linen - *[Tile]*
- Metal grid - *[Tile]*
- Noise - *[Tile]*
- Stone - *[Tile]*
- Square - *[Tile]*
- Vertical - *[Tile]*
- Wood - *[Tile]*
- Carbon Fiber (Solid) - *[Tile]*
- Grid (Solid) - *[Tile]*
- Noise (Solid) - *[Tile]*
- Pixels (Solid) - *[Tile]*
- Wood (Solid) - *[Tile]*

2.2.9 ExtraContent 1 Options

A collection of color and background image options as they pertain to the header or ExtraContent1 area.

- Header - *[Color]*
- Border - *[Color]*
- Text - *[Color]*
- Link - *[Color]*
- Slide navigation - *[Color]*
- Image 3 - *[Background]*
- Image 4 - *[Background]*
- Image 5 - *[Background]*
- Image 6 - *[Background]*
- Image 7 - *[Background]*
- Image 8 - *[Background]*
- Image 9 - *[Background]*

- Image 10 - *[Background]*
- Image 11 - *[Background]*
- Image 12 - *[Background]*
- Image 13 - *[Background]*
- Image 14 - *[Background]*
- Image 15 - *[Background]*
- Image 16 - *[Background]*
- Image 17 - *[Background]*
- Image 18 - *[Background]*
- Image 19 - *[Background]*
- Image 20 - *[Background]*
- Blank - *[Background] [Default]*

2.2.10 ExtraContent 1 Height

Sets the height of the header. The header is located within the top portion of the site, under the title and slogan. Since there is padding and the possibility of content overrun, these heights are only an approximation.

- Hidden - *[Default]*
- 120px
- 240px
- 360px
- Variable

2.2.11 ExtraContent 2 Options

A collection of color settings for the ExtraContent 2 area.

- Background - *[Color]*
- Border - *[Color]*
- Text - *[Color]*
- Link - *[Color]*

2.2.12 ExtraContent 3 Options

A collection of color and background tile options that pertain to ExtraContent 3.

- Background - *[Color]*
- Border - *[Color]*
- Text - *[Color]*

- Link - *[Color]*
- No Tile (ExtraContent 3) - *[Tile]* *[Default]*
- Blueprint - *[Tile]*
- Chalk - *[Tile]*
- Diagonal - *[Tile]*
- Dotted - *[Tile]*
- Horizontal - *[Tile]*
- Linen - *[Tile]*
- Metal grid - *[Tile]*
- Noise - *[Tile]*
- Stone - *[Tile]*
- Square - *[Tile]*
- Vertical - *[Tile]*
- Wood - *[Tile]*
- Carbon Fiber (Solid) - *[Tile]*
- Grid (Solid) - *[Tile]*
- Noise (Solid) - *[Tile]*
- Pixels (Solid) - *[Tile]*
- Wood (Solid) - *[Tile]*

2.2.13 ExtraContent 4 Options

A collection of color settings for the ExtraContent 4 area.

- Background - *[Color]*
- Border - *[Color]*
- Text - *[Color]*
- Link - *[Color]*

2.2.14 ExtraContent 5 Options

A collection of color settings for the ExtraContent 5 area.

- Background - *[Color]*
- Border - *[Color]*
- Text - *[Color]*
- Link - *[Color]*

2.2.15 ExtraContent 6 Options

A collection of color and background tile options that pertain to ExtraContent 6.

- Background - *[Color]*
- Border - *[Color]*
- Text - *[Color]*
- Link - *[Color]*
- No Tile (ExtraContent 6) - *[Tile] [Default]*
- Blueprint - *[Tile]*
- Chalk - *[Tile]*
- Diagonal - *[Tile]*
- Dotted - *[Tile]*
- Horizontal - *[Tile]*
- Linen - *[Tile]*
- Metal grid - *[Tile]*
- Noise - *[Tile]*
- Stone - *[Tile]*
- Square - *[Tile]*
- Vertical - *[Tile]*
- Wood - *[Tile]*
- Carbon Fiber (Solid) - *[Tile]*
- Grid (Solid) - *[Tile]*
- Noise (Solid) - *[Tile]*
- Pixels (Solid) - *[Tile]*
- Wood (Solid) - *[Tile]*

2.2.16 ExtraContent 7 Options

A collection of color and background tile options that pertain to ExtraContent 7.

- Background - *[Color]*
- Border - *[Color]*
- Text - *[Color]*
- Link - *[Color]*
- No Tile (ExtraContent 7) - *[Tile] [Default]*
- Blueprint - *[Tile]*
- Chalk - *[Tile]*
- Diagonal - *[Tile]*
- Dotted - *[Tile]*
- Horizontal - *[Tile]*
- Linen - *[Tile]*
- Metal grid - *[Tile]*
- Noise - *[Tile]*
- Stone - *[Tile]*
- Square - *[Tile]*

- Vertical - *[Tile]*
- Wood - *[Tile]*
- Carbon Fiber (Solid) - *[Tile]*
- Grid (Solid) - *[Tile]*
- Noise (Solid) - *[Tile]*
- Pixels (Solid) - *[Tile]*
- Wood (Solid) - *[Tile]*

2.2.17 Slideshow Type

The slide show type allows you to choose from Off, Content or a selection of preset internal sequences.

- Off / Manual (snippet) - *[Default]* turns off the slide show unless the *SlideNum* or *SlideWH* snippets are detected.
- Content (SlideBox stack/snippet) - enables the use of content slides created either with the *SlideBox* snippet or *SlideBox* stack.
- Slides 1 to 5 - enables the internal slide sequence using slides *X* to *Y*.
- Slides 6 to 10
- Slides 11 to 15
- Slides 16 to 20
- Slides 1 to 10
- Slides 11 to 20
- Slides 1 to 20

2.2.18 Slideshow Timeout

Slide show timeout allows you to select the duration that any given slide in the sequence will be shown for, from a minimum of 4 seconds to a maximum to 20 seconds.

- 4 seconds - *[Default]*
- 6 seconds
- 8 seconds
- 12 seconds
- 16 seconds
- 20 seconds

2.2.19 Slideshow Effect

Slide show effect allows you to choose from an assortment of transition animations that determine the how one slide will switch to the next.

- Blind X
- Blind Y
- Fade - *[Default]*
- Grow X
- Grow Y
- Scroll down
- Scroll left
- Scroll right
- Scroll up
- Shuffle
- Toss
- Random

2.2.20 Slideshow Speed

Slide show speed controls the amount of time a transition takes. The shorter the time, the faster the animation is that switches one slide to the next.

- 1/4 second
- 1/2 second
- 3/4 second
- 1 second - *[Default]*
- 1 1/2 second
- 2 seconds
- 2 1/2 seconds

2.2.21 Slideshow Settings

Slide show settings are a collection of additional features that you can enable individually or en masse.

- Auto stop - *automatically stops the slide show once the last slide has been reached.*
- Navigation - *displays left and right navigation arrows at either side of each slide.*
- Pager - *displays pager buttons at the bottom of each slide.*
- Pause on hover - *causes the slide show to pause the slide show when hovered over.*
- Random order - *displays the slides in random order.*

2.2.22 Sidebar Position

Sets the sidebar position.

- Right [*Default*]
- Left
- Hide

2.2.23 Font Family

Sets the default font family for the whole theme.

- Sans-serif (general)
- Serif (general)
- Helvetica (sans-serif)
- Lucida Grande (sans-serif)
- Fredericka the Great (Google, cursive)
- Titan One (Google, cursive)
- Qwigley (Google, cursive)
- Droid Sans Mono (Google, mono)
- Droid Sans (Google, san-serif)
- PT Sans (Google, san-serif)
- Source Sans Pro (Google, sans-serif)
- Alegreya (Google, serif)
- Average (Google, serif)
- Neuton (Google, serif)

2.2.24 Font Size

Sets the relative font size for the whole theme

- Extra small
- Small
- Medium - [*Default*]
- Large
- Extra large

2.2.25 Font Family (Site Title)

Sets the font family for the site title only.

- Theme default (Site Title) - *[Default]*
- Sans-serif (general)
- Serif (general)
- Helvetica (sans-serif)
- Lucida Grande (sans-serif)
- Fredericka the Great (Google, cursive)
- Titan One (Google, cursive)
- Qwigley (Google, cursive)
- Droid Sans Mono (Google, mono)
- Droid Sans (Google, sans-serif)
- PT Sans (Google, sans-serif)
- Source Sans Pro (Google, sans-serif)
- Alegreya (Google, serif)
- Average (Google, serif)
- Neuton (Google, serif)

2.2.26 Font Family (Site Slogan)

Sets the font family for the site slogan only.

- Theme default (Site Slogan) - *[Default]*
- Sans-serif (general)
- Serif (general)
- Helvetica (sans-serif)
- Lucida Grande (sans-serif)
- Fredericka the Great (Google, cursive)
- Titan One (Google, cursive)
- Qwigley (Google, cursive)
- Droid Sans Mono (Google, mono)
- Droid Sans (Google, sans-serif)
- PT Sans (Google, sans-serif)
- Source Sans Pro (Google, sans-serif)
- Alegreya (Google, serif)
- Average (Google, serif)
- Neuton (Google, serif)

2.2.27 Font Family (Navigation)

Sets the font family for the navigation only.

- Theme default (Navigation) - *[Default]*

- Sans-serif (general)
- Serif (general)
- Helvetica (sans-serif)
- Lucida Grande (sans-serif)
- Fredericka the Great (Google, cursive)
- Titan One (Google, cursive)
- Qwigley (Google, cursive)
- Droid Sans Mono (Google, mono)
- Droid Sans (Google, sans-serif)
- PT Sans (Google, sans-serif)
- Source Sans Pro (Google, sans-serif)
- Alegreya (Google, serif)
- Average (Google, serif)
- Neuton (Google, serif)

2.2.28 Font Family (Headings)

Sets the font family for the headings only.

- Theme default (Headings) - *[Default]*
- Sans-serif (general)
- Serif (general)
- Helvetica (sans-serif)
- Lucida Grande (sans-serif)
- Fredericka the Great (Google, cursive)
- Titan One (Google, cursive)
- Qwigley (Google, cursive)
- Droid Sans Mono (Google, mono)
- Droid Sans (Google, sans-serif)
- PT Sans (Google, sans-serif)
- Source Sans Pro (Google, sans-serif)
- Alegreya (Google, serif)
- Average (Google, serif)
- Neuton (Google, serif)

2.2.29 Line Height

Sets the overall line height.

- Small
- Medium - *[Default]*
- Large

2.3 Theme Styles

2.3.1 Using Theme Styles

Theme Styles are ways of grouping selected Theme Variations. Themes can ship with Theme Styles built in, they can be made available separately as “.rwstyle” files, and the user can create their own within RapidWeaver. If you’ve never used Theme Styles before they might be a little tough to find at first.

1. Open the Page Inspector (View > Show Page Inspector),
2. Click the “Styles” tab,
3. Click the folder icon found at the bottom of the panel,
4. Select the theme style you like.

See Figure 1.

2.3.2 Making Your Own Theme Styles

Making your own theme styles is a great way to apply a group of your favorite theme variations and colors to other pages on your site.

1. Open the Page Inspector (View > Show Page Inspector),
2. Click the “Styles” tab,
3. Set all the variations and colors to your liking,
4. Click the cog icon found at the bottom of the panel,
5. Select “Save Style As. . .”,
6. Enter an appropriate name.

See Figure 2.

2.3.3 Installing Theme Styles

Theme Styles might also come independent of the theme itself, downloaded from another source. RapidWeaver Theme styles are identified by their “.rwstyle” extension. To install these Theme Styles simply double-click them and RapidWeaver will install them for you automatically.

3 Advanced Features

3.1 ExtraContent

Home page: <http://foss.seydoggy.com/?p=ExtraContent>

Figure 1: Using Theme Styles

Figure 2: Saving Theme Styles

ExtraContent is a nearly ubiquitous technology found in most modern RapidWeaver themes today. Since it was first introduced in 2008, ExtraContent has been one of the most sought after, most requested features of all time. ExtraContent allows users to take their RapidWeaver site beyond the usual sidebar/content layout and add content in places otherwise out of reach for RapidWeaver.

In tre3rty, the 7 ExtraContent areas are located from top to bottom as follows:

- ExtraContent1 and ExtraContent2 are located in the top area (header) of the layout, just under the title and slogan.
- ExtraContent3 is located between the top section and main area (content and sidebar) of the layout.
- ExtraContent4 and ExtraContent5 are attached to the top and bottom of the main area (content and sidebar).
- ExtraContent6 is located under the main area of the layout.
- ExtraContent7 is located between the main area of the layout and the footer.

3.1.1 ExtraContent 1 — The Place for Headers, Banners and Sliders, Oh My!

A fairly standard feature on any site is the top space, above the fold if you will, where the biggest imagery, the most important ideas or most recent news goes. This is called the site header and can be filled with all kinds of content.

In tre3rty, adding your own simple header image is easy (see ‘Customize Your Theme > Images’ in this manual), but what if you want your header to say more than that? We use ExtraContent 1 or SS3 for that.

Let’s look at the theme options aimed specifically at the site header and ExtraContent 1:

- **ExtraContent 1 Options:** you can choose a header image as your site header or use a color, as a backdrop to your content.
- **ExtraContent 1 Height:** You can specify a height if need be or use the variable height setting to allow the header height adjust to your content.

We know that you don’t want to be locked into just one way of doing things, that’s why the header is so flexible and responsive to your input. By using ExtraContent in your site header, you are free to craft any type of content that you feel fits the area. If you are using Stacks, then nearly anything is possible. Maybe an left-floated image with right-floated text, or a slider like the built-in SS3, [Bootstrap Carousel](#) or [Super Flex](#) from Nick Cates Design.

Or if you prefer a more manual approach, remember that Twitter Bootstrap is built-in to tre3rty, meaning that you have access to all sorts of advanced content features like [grids](#), [thumbnails](#) and [sliders](#), just to name a few.

3.1.2 ExtraContent Stack

(Requires *Stacks*)

1. [Download](#) and install the ExtraContent add-ons.
2. Open the Stack element panel.
3. Search for “ExtraContent” in the panel’s search field.
4. Drag the ExtraContent stack on your page.
5. Change the ExtraContent value in the settings.
6. Add more stacks inside the ExtraContent stack and preview.
7. Depending on your theme, your ExtraContent may now automatically appear, or there might be an option to turn the ExtraContent on or off.
8. To add more content to more areas, simply repeat steps 1 through 6.

NOTE: Do not use Stacks Background, Border and Layout options on the ExtraContent stack itself. These features are general stack settings that are common to all stacks but do not apply in all cases. Only apply said options to your content *within* the ExtraContent stack.

3.1.3 ExtraContent Snippet

1. [Download](#) and install the ExtraContent add-ons.
2. Open the RapidWeaver Snippet browser (“View > Show Snippets”).
3. Search for “ExtraContent” in the browser’s search field.
4. Drag an appropriate snippet somewhere on your page, either in the main content or the sidebar.
5. Between the opening `<div id="myExtraContent1">` and closing `</div>`, replace everything with content of your own. For example:

```
<div id="myExtraContent1">Hello world!</div>
```

6. To change which area your content is displayed in, simple change the number at the end of the id to one that corresponds with the desired area in your theme. For example:

```
<div id="myExtraContent2">Hello world!</div>
```

7. Depending on your theme, your ExtraContent may now automatically appear, or there might be an option to turn the ExtraContent on or off.

8. To add more content to more areas, simply repeat the process, using numbers that correspond to those in your theme. For example:

```
<div id="myExtraContent1">Hello world!</div>
<div id="myExtraContent2">
  Question: What did foo say when he walked
  into a bar?
</div>
<div id="myExtraContent3">Answer: "Ouch!"</div>
```

9. You can add ExtraContent tags around just about anything. Say for instance you wanted to embed a video above your main content with this embed code:

```
<iframe
  src="http://player.vimeo.com/video/46506843"
  width="500" height="313" frameborder="0"
  webkitAllowFullScreen mozallowfullscreen
  allowFullScreen>
</iframe>
```

10. Then all you need to do is add `<div id="myExtraContent1">` in front and `</div>` at the end, like this:

```
<div id="myExtraContent2">
  <iframe
    src="http://player.vimeo.com/video/46506843"
    width="500" height="313" frameborder="0"
    webkitAllowFullScreen mozallowfullscreen
    allowFullScreen>
  </iframe>
</div>
```

11. If using ExtraContent with HTML code in a styled-text type area, be sure to use the option `Format > Ignore Formatting` if your code breaks out over several lines. Otherwise your formatting might have excessive spacing or have awkward steps.

3.2 SS3

Home page: <http://foss.seydoggy.com/?p=SS3>

In 2011 we launched the third iteration of an integrated slide show that we'd been putting in seyDesign RapidWeaver® themes since 2010. This third version, dubbed SS3, was also the first time we'd opened up the source for all developers to use in their own themes.

SS3 allows users to turn just about anything into a slide show. From built-in images, remote images, content, stacks and more!

For full instructions and tutorial videos on how to use SS3, please visit <http://foss.seydoggy.com/?p=SS3>.

3.2.1 Basic Features of SS3

Note: All of these basic features can be found in the RapidWeaver Page Inspector under the Styles tab and have been covered already in this manual.

1. Image (ExtraContent 1 Options)
2. Height (ExtraContent 1 Height)
3. Slide Show Type
4. Slide Show Timeout
5. Slide Show Settings

3.2.2 SlideBox Stack

SlideBox is a simple, effective stack that allows you to create a content-rich slide show in any SeydoggySlideshow 3 (or SS3) enabled theme. From simple text and images or anything you can imagine, your SS3 enabled theme will turn each box into it's own slide.

Using the built-in slide show controls in your SS3 enabled theme, you can add flare to your content slide show with speed settings, delays and special effects. Or take it a step further and use the advanced tricks in the SS3 User API to link each slide to another destination.

1. Download and install the [SlideBox stack](#).
2. Drag a SlideBox stack from your Stacks Library onto your Stacks page.
3. Drag other stacks into each available content space and propagate each item with text and media as needed.
4. To add or remove items from your slide show, open the SlideBox stacks HUD and select the number of items you want in your slide show.
5. Refer to your themes Styles panel for further settings.

3.2.3 SlideBox Snippet

The SlideBox snippet is a complimentary snippet for use with SeydoggySlideshow 3 (or SS3) enabled themes. The sdSlideBox snippet is a method for creating content based slides using HTML.

Using the built-in slide show controls in your SS3 enabled theme, you can add flare to your content slide show with speed settings, delays and special effects. Or take it a step further and use the advanced tricks in the SS3 User API to link each slide to another destination.

1. Download and install the [SlideBox snippet](#).
2. Open the Page Inspector (RapidWeaver > View > Show Page Inspector).
3. Be sure that the setting found in Page Inspector > Styles > Slide show type > Content (SlideBox stack/snippet) is selected.
4. Paste the sdSlideBox snippet into any content area in RapidWeaver. It will look like this:

```
<div class="sdSlideBoxSnippet" id="mySdSlideBox1">  
    This content will appear as slide 1.<br/>  
    Some sample content. Add whatever you like here.  
</div>
```

```
<div class="sdSlideBoxSnippet" id="mySdSlideBox2">  
    This content will appear as slide 2.<br/>  
    Some sample content. Add whatever you like here.  
</div>
```

```
<div class="sdSlideBoxSnippet" id="mySdSlideBox3">  
    This content will appear as slide 3.<br/>  
    Some sample content. Add whatever you like here.  
</div>
```

5. If you've pasted the snippet into a styled-text type area then you need to select the HTML code and ignore the formatting (RapidWeaver > Formatting > Ignore Formatting).
6. Edit each sample text with any HTML of your liking. Each area is a unique slide. The sample text looks like this:

```
This content will appear as slide 1.<br/>  
Some sample content. Add whatever you like here.
```

7. To add slides, simply add a new `sdSlideBoxSnippet` wrapper and number it accordingly. For example, if I wanted to add a fourth slide, I would copy the third slide and change the id from `mySdSlideBox3` to `mySdSlideBox4`. Like this:

```
<div class="sdSlideBoxSnippet" id="mySdSlideBox4">  
    This content will appear as slide 4.<br/>  
    Some sample content. Add whatever you like here.  
</div>
```

3.2.4 SlideLinks

The SlideLinks Snippet is a complimentary snippet for use with SeydoggySlideshow 3 (or SS3) enabled themes. The `sdSlideLinks` snippet is a method for defining unique URL's for each slide in an SS3 slide show, whether they are the default internal image slides, externally hosted image slides or content based SlideBox slides.

1. Download and install the [SlideLinks snippet](#).
2. Open the Page Inspector (RapidWeaver > View > Show Page Inspector).
3. Once you've set up the slide show with the desired settings, paste this snippet into Page Inspector > Header > JavaScript changing each URL to suit your needs.
4. The snippet will look like this:

```
sdSS.slideLinks = [  
    "http://www.google.com",  
    "http://www.tumblr.com",  
    "http://www.twitter.com",  
    "http://www.flickr.com",  
    "http://www.facebook.com"  
];
```

5. The order of the links will coincide with the order of your slides.
6. Be sure that the number of links used matches the number of slides in your slide show. To add links to the end of your sequence:
 - a) Add a comma to the end of the URL line that is currently last (i.e. "http://www.facebook.com",).
 - b) Add a new line after the comma.
 - c) On the new line, add your new URL in quotations (i.e. "http://seydesign.com").

d) Repeat a through c for each additional link.

The snippet will now look like this:

```
sdSS.slideLinks = [  
    "http://www.google.com",  
    "http://www.tumblr.com",  
    "http://www.twitter.com",  
    "http://www.flickr.com",  
    "http://www.facebook.com",  
    "http://seydesign.com"  
];
```

7. To remove links from the end of your sequence:

a) Remove the last URL line (i.e. "http://www.facebook.com").

b) Remove the trailing comma from what is now the last URL line (i.e. "http://www.flickr.com")

c) Repeat a and b for each link you wish to remove.

The snippet will now look like this:

```
sdSS.slideLinks = [  
    "http://www.google.com",  
    "http://www.tumblr.com",  
    "http://www.twitter.com",  
    "http://www.flickr.com"  
];
```

3.2.5 SlideNum

The SlideNum snippet is a complimentary snippet for use with SeydoggySlideshow 3 (or SS3) enabled themes. The sdSlideNum snippet is a method for defining how many slides to show and in which order, should you find the built-in slide sequences do not suit your needs.

1. Download and install the [SlideNum snippet](#).
2. Open the Page Inspector (RapidWeaver > View > Show Page Inspector).
3. Be sure that the setting found in Page Inspector > Styles > Slide show type > Off / Manual (snippet) is selected.
4. Paste this snippet into Page Inspector > Header > JavaScript changing each number to suit your needs.

The snippet will look like this:

```
sdSS.slideNum = [3,5,1,9,15];
```

Each number corresponds to a header image (i.e. “3” is “Background image 3” from the Page Inspector > Styles > Background (header/slide show)[EC 1] menu). The order of the numbers will coincide with the order of your slides.

5. sdSlideNum is actually a simple comma separated list. Adding or removing slides in the sequence is just a matter of adding or removing numbers from the list. Just make sure that each number is separated from the next number by a comma, making sure that the last number in the list is NOT followed by a comma.

Here are just a few examples:

- a) A sequence that starts at header image 1 and goes through to header image 8:

```
sdSS.slideNum = [1,2,3,4,5,6,7,8];
```

- b) A sequence of header images from 20 to 16 in reverse order:

```
sdSS.slideNum = [20,19,18,17,16];
```

- c) A sequence of 7 random header image starting at 9 and ending 10:

```
sdSS.slideNum = [9,6,11,2,20,17,10];
```

3.2.6 SlideWH

The SlideWH snippet is a complimentary snippet for use with SeydoggySlideshow 3 (or SS3) enabled themes. The sdSlideWH snippet is a method for defining externally hosted images to be used in your slide show sequence instead of the built-in images.

1. Download and install the SlideWH snippet.
2. Open the Page Inspector (RapidWeaver > View > Show Page Inspector).
3. Be sure that the setting found in Page Inspector > Styles > Slide show type > Off / Manual (snippet) is selected.
4. Paste the sdSlideWH snippet into Page Inspector > Header > JavaScript changing each image source to suit your needs.

The snippet will look like this:

```
sdSS.slideWH = [  
    "http://www.example.com/images/header3.jpg",  
    "http://www.example.com/images/header5.jpg",  
    "http://www.example.com/images/header1.jpg",  
    "http://www.example.com/images/header9.jpg",  
    "http://www.example.com/images/header15.jpg"  
];
```

The order of the images will coincide with the order of your slides.

5. To add more images to your slide show sequence:
 - a) Add a comma to the end of the image source line that is currently last (i.e. “<http://www.example.com/images/header15.jpg>”).
 - b) Add a new line after the comma.
 - c) On the new line, add your new image source in quotations (i.e. “<http://www.example.com/images/header20.jpg>”).
 - d) Repeat a through c for each additional link.

The snippet will now look like this:

```
sdSS.slideWH = [  
    "http://www.example.com/images/header3.jpg",  
    "http://www.example.com/images/header5.jpg",  
    "http://www.example.com/images/header1.jpg",  
    "http://www.example.com/images/header9.jpg",  
    "http://www.example.com/images/header15.jpg",  
    "http://www.example.com/images/header20.jpg"  
];
```

6. To remove images from your slide show sequence:
 - a) Remove the last image source line (i.e. “<http://www.example.com/images/header15.jpg>”).
 - b) Remove the trailing comma from what is now the last image source line (i.e. “<http://www.example.com/images/header9.jpg>”).
 - c) Repeat a and b for each image you wish to remove.

The snippet will now look like this:

```
sdSS.slideWH = [  
    "http://www.example.com/images/header3.jpg",  
    "http://www.example.com/images/header5.jpg",  
    "http://www.example.com/images/header1.jpg",  
    "http://www.example.com/images/header9.jpg"  
];
```

3.3 SocialLinks

Home page: <http://foss.seydoggy.com/?p=Social%20Links>

Social Links is a complimentary snippet for use with some themes that allows users to easily add simple social links to the designated area of the theme. A perfect combination of ExtraContent and Font Awesome, Social Links lets your site be social in a few easy steps. In tre3rty, the Social Links are located at the top right of the layout.

1. [Download](#) and install the Social Links snippet.
2. Paste this snippet into the main content area or sidebar area of your site. It will look like this

```

<!--
  Instructions:
  1. Paste this snippet into the main content area or
     sidebar area of your site.

  2. If pasted into a styled text area, be sure to
     select the snippet then use Format > Ignore
     Formatting.

  3. Replace # with the full URI you wish to link to.

  4. Add or remove lines as needed.

  5. For a list of other supported icons, visit:
     http://fortawesome.github.com/Font-Awesome/
-->
<div id="myExtraContent12">
  <ul class="social_links">
    <li><a href="#" class="icon-home"></a></li>
    <li><a href="#" class="icon-twitter-sign"></a></li>
    <li><a href="#" class="icon-facebook-sign"></a></li>
    <li><a href="#" class="icon-github-sign"></a></li>
    <li><a href="#" class="icon-plus-sign"></a></li>
    <li><a href="#" class="icon-camera"></a></li>
    <li><a href="#" class="icon-shopping-cart"></a></li>
  </ul>
</div>

```

3. If pasted into a styled text area, be sure to select the snippet then use Format > Ignore Formatting.
4. Replace # with the full URI you wish to link to.
5. Add or remove lines as needed.
6. For a list of other supported icons, visit [Font Awesome](#).

3.4 FontAwesome

Since tre3rty use FontAwesome for Social Links, it's also available theme-wide for anything else you might need nifty little icons for. Learn more about [Font Awesome](#).

3.5 jQuery

tre3rty comes with the same version of [jQuery](#) that is used in the Stacks RapidWeaver plugin. In fact, if the Stacks version is detected then tre3rty's version is ignored. jQuery is a multi-browser JavaScript library designed to simplify the client-side scripting of HTML. Used by over 65% of the 10,000 most visited websites, jQuery is the most popular JavaScript library in use today.

jQuery's syntax is designed to make it easier to navigate a document, select DOM elements, create animations, handle events, and develop Ajax applications. jQuery also provides capabilities for developers to create plug-ins on top of the JavaScript library. This enables developers to create abstractions for low-level interaction and animation, advanced effects and high-level, theme-able widgets. The modular approach to the jQuery library allows the creation of powerful dynamic web pages and web applications.

Learn more about [jQuery](#).

3.6 Bootstrap

“Sleek, intuitive, and powerful front-end framework for faster and easier web development.” – <http://twitter.github.io/bootstrap>

Twitter Bootstrap is baked right into tre3rty. A free collection of tools for creating websites and web applications, Twitter Bootstrap contains HTML and CSS-based interface components and JavaScript extensions. It is an incredibly powerful and tool to add some extra flare to your RapidWeaver projects. If you're not afraid of a little HTML, CSS and maybe a little JavaScript, then you'll have a great time with Bootstrap. Learn more about [Twitter Bootstrap](#).

4 Customize Your Theme

4.1 General

There are two main ways to modify a themes behavior beyond the options available in the styles panel:

1. Use the Header, CSS, JavaScript and Prefix fields found in **View > Show Page Inspector > Header**.
2. Modify the themes contents by opening the theme contents in RapidWeaver:
 1. From the RapidWeaver menu, select **View > Show Themes**.

2. Use the search field to find your theme.
3. Right-click (^+click, control + click) on your theme and select “Reveal Contents in Finder...”

4.2 Images

tre3rty comes with header images built-in, but these are just place holders for the wonderful imagery that you’re capable of. Changing these images is as easy as can be in one of several ways.

1. Using the free application, [RWMultitool Lite](#), you can simply drag and drop new images onto the existing built-in images. Visit to learn more.
2. You can modify your theme’s images by opening the theme contents in the Finder and edit them from within the theme.
 1. Open the RapidWeaver Theme Drawer (View > Show Themes),
 2. Start typing the theme name in the search box,
 3. Right-click on your theme,
 4. Select, “Reveal Contents in Finder...”,
 5. Navigation to the folder `images > editable_images`,
 6. Modify those images to suit.
3. You can also keep your theme intact and use custom CSS.

For the header:

```
.pageHeader{  
    background:url(link/to/your/header.jpg) 50% 50% repeat;  
    background-size:cover;  
}
```

This CSS can be applied in one of two places:

1. In View > Show Page Inspector > Header > CSS
2. By opening the theme’s contents in Finder and editing the custom.css file.

4.3 CSS

tre3rty comes with a blank custom.css file for you to apply whatever custom styles you like. The advantage to placing your custom code here as opposed to the Page Inspector is that the code is applied throughout your entire RapidWeaver project.

Simply open your theme’s contents and edit the custom.css file suit your needs.

4.4 JavaScript

tre3rty comes with a blank `custom.js` file for you to apply whatever custom scripts you like. The advantage to placing your custom code here as opposed to the Page Inspector is that the code is applied throughout your entire RapidWeaver project.

Simply open your theme's contents and edit the `custom.js` file suit your needs.

5 Updating Your Theme

5.1 Backing up

Before updating your theme you should always make a backup copy. To do so:

1. Open the RapidWeaver Theme Drawer (View > Show Themes),
2. Start typing the theme name in the search box,
3. Right-click on your theme icon when it appears,
4. Choose "Duplicate" and give it an appropriate backup name.

5.2 Updating

To update your theme, download a new copy of your theme from our [order lookup](#) page. Follow the steps to find your order and download the latest version. The version you download will always be the latest version.

Once downloaded, open the zip/dmg file, find the ".rwtheme" and double-click it. RapidWeaver will now automatically install the updated version for you.
