7. SUPPORT

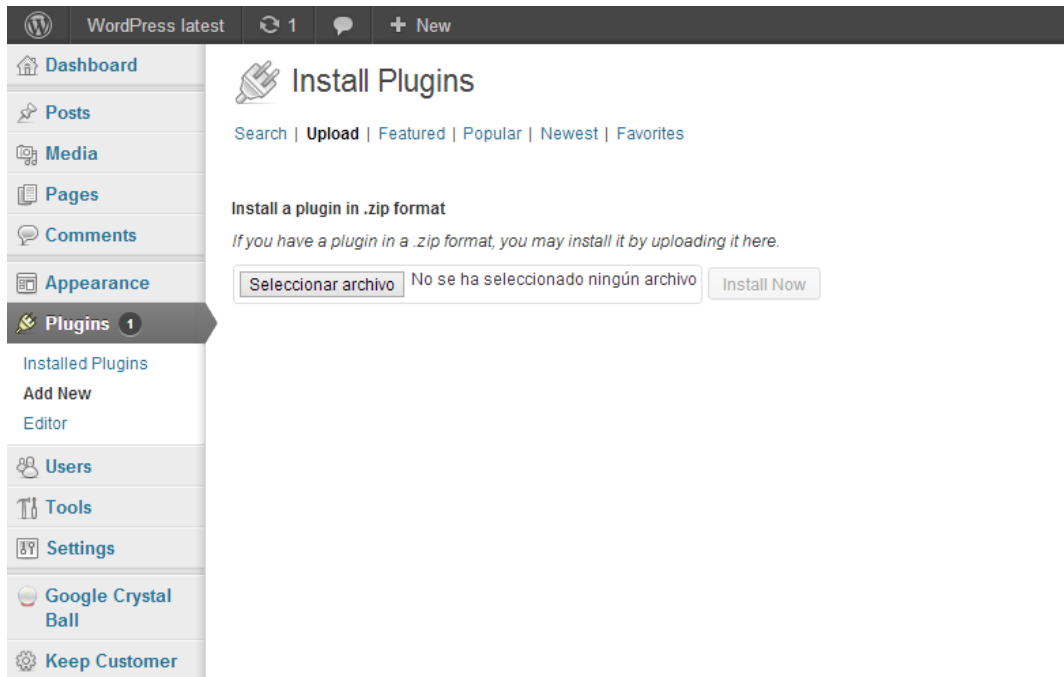

1. INTRODUCTION

This plugin allows you to engage your audience on your website using intelligent surveys & quizzes. Includes advanced list-segmentation, Webinar support, full SEO integration, split-testing functionality and full reporting.

You can create unlimited surveys, get stats, and segment visitors according to their answers provided.

2. INSTALLATION PROCESS

This plugin is installed like any other Premium plugins. You should go to Plugins >> Add New and then choose “Upload”.

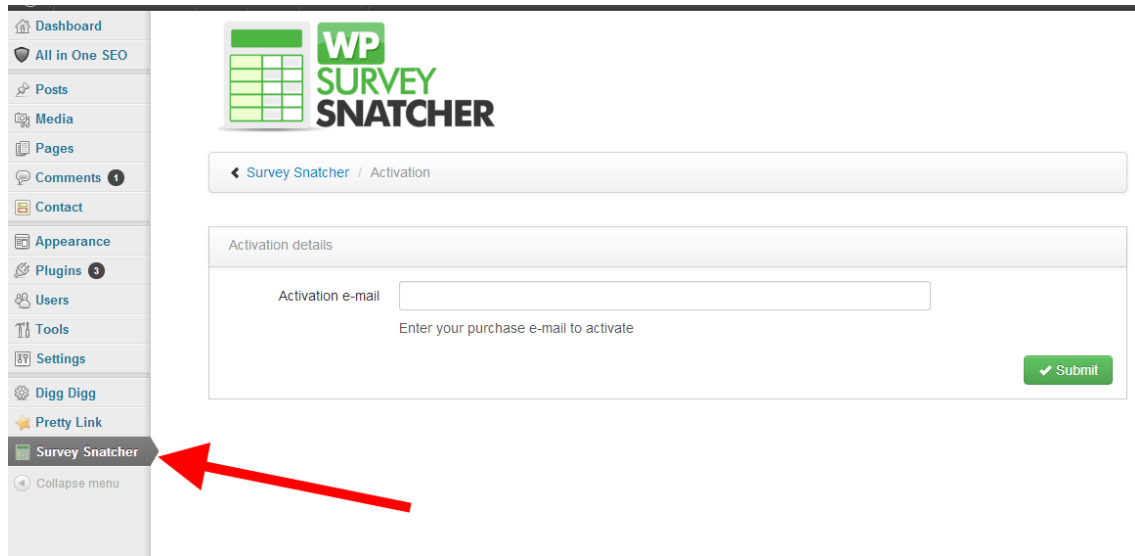

The next step is to select the .zip file that you downloaded, and click on “Install Now”.

Finally, click on “Activate Plugin” to activate it in the WordPress interface.

Now, you will need to activate the plugin. To do so, go to the Survey Snatcher menu in the sidebar, and enter the e-mail you used to purchase Survey Snatcher.

3. INITIAL STEPS

The first thing you need to do is to download the bonus image pack (50 backgrounds you can use in any survey).

To do so, go to Survey Snatcher >> Settings and scroll to the bottom, where you will see “Install Image Pack”. Click on download and wait until the process finishes (please note that in slow connections, the download might take up to 4 minutes).

Once this previous step is done, if you want to integrate Survey Snatcher with one of the supported Autoresponder systems, you can do so from the same Settings screen.

Currently, these autoresponders are supported:

- Aweber
- Getresponse
- Mailchimp
- Icontact
- Constant Contact

For Aweber, you will only need to authorize Survey Snatcher to access your autoresponder information. For the others, you will need to enter your API information.

You can also integrate the plugin with Gotowebinar (you will need to create an Api Key [here](#)) and any of those plugins: [Webinar Express](#) and [Hangouts Plugin](#). To use those last two, they need to be installed and activated in the same WordPress site as Survey Snatcher.

If you want to use the Facebook connect button to get the email address from visitors, you will first need to create an app ([here](#)) and enter the App Id and App Secret in the same settings screen.

4. USAGE GUIDE

The plugin is divided into 5 different sections:

- 1) **Surveys**
Survey list
- 2) **New survey**
Create a new survey
- 3) **SEO**
SEO settings and reports
- 4) **Split-testing**
Create split-testing cases and see stats
- 5) **Settings**
Configure plugin settings

4.1. Survey list

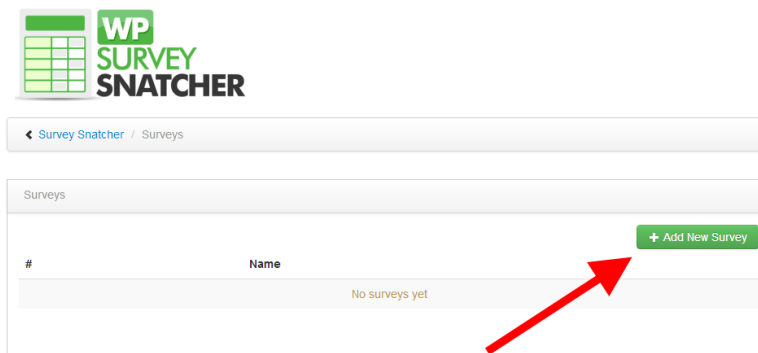

From this screen, you can:

- create a new survey
- activate/deactivate an existing survey
- edit an existing survey
- export survey results (summary or full)
- duplicate a survey (the new one will be identical to the old one, except for the already existing stats)
- delete a survey

4.2. Creating a new survey

From the survey list, click on the button “Add New Survey”

You will be redirected to the “New Survey” Screen:

WP SURVEY SNATCHER

< Survey Snatcher / New Survey

Survey Settings

General Settings Display Options Stats Questions Save Survey

General Settings

Name: Survey Name

Type: Survey

Survey: Questions appear one by one
Quiz: Questions appear all in one row, only embeddable

Description:

Give the survey a description (not visible to visitors)

Active: ON

Autoresponder: Aweber

You can configure autoresponder settings [here](#)

Webinar System: GotoWebinar

You can configure webinar settings [here](#)

Save Survey

There are 4 different tabs under this screen:

General Settings: Configure all common aspects for the survey (give it a name, status, autoresponder system, etc)

Display Options: How and where to display

Stats: View real-time stats about conversions, etc.

Questions: Enter all the questions and option forms

a) General Settings

Name: Survey name (for internal use)

Type:

Survey: Questions are presented one by one. Next question depends on previous answer (non-linear path). Can have multiple end-points.

Quiz: All questions are presented in a row. Single end-point

Description (optional): Short text to describe the survey

Active: On/off; if the survey is Off, won't be shown to the visitor

Autoresponder (optional): Autoresponder system to use for this survey

Webinar (optional): Webinar system to use for this survey

b) Display Options

Method: Currently there are 7 methods to display a survey/quiz:

- Popup: displays an html popup, with the background semi-transparent (so the rest of the page is still partially visible)
- Top Bar: A colour bar appears at the top, with a Call to Action. When the user clicks on the call to action, the survey is displayed
- Side Bar: An image appears on the left; when the visitor clicks on it, the survey appears
- Exit Popup: When the user drags the mouse near the top of the screen (about to click back / close), a popup with the survey is displayed.
- Chat: A facebook-like chat appears at the bottom right of the screen
- Full page splash: similar to the popup, but the rest of the screen is covered, so the visitor will only see the survey and nothing else
- Embed: you can embed in a post/page, using the shortcode provided

Each method can be fully configured regarding colours, images, etc.

Trigger settings:

- Cookie: if you activate this option, the visitor will see the survey only once, and won't be presented again until x days later (configurable)
- Delay: The survey will appear x secs after the page is loaded
- Scroll: The survey will appear after the user has scrolled a certain % of the page

Post/pages: the survey can appear only on specific pages. If "show everywhere" is checked, it will appear on every single page. If it is unchecked, you can choose the post/pages/categories where it will appear.

Note: keep Control key pressed while selecting multiple post/pages/categories

c) Stats

Here you can get survey stats, with the following fields:

Times shown: number of times that the survey/call to action has been presented to the visitor

Started: number of times when the user has submitted at least the first question

Conversions: number of times when the visitor entered his e-mail address

The screenshot shows the 'Survey Stats' section of a 'Survey Settings' interface. At the top, there are tabs for 'General Settings', 'Display Options', 'Stats' (which is active), and 'Questions'. A green 'Save Survey' button is in the top right. Below the tabs, the 'Survey Stats' section contains a table with the following data:

Times shown	75
Started	7
Conversions	5
Conversion Rate	6.67%

Below the table, there are three buttons: 'Export summary' (with a download icon), 'Export replies' (with a document icon), and 'Clear stats' (with a trash icon). A second green 'Save Survey' button is in the bottom right.

Export summary: Downloads a CSV report with the results for multiple choice questions: what % of people chose each option.

Export replies: Downloads a CSV report with every single survey taken. Displays the visitor e-mail plus the answer to each one of the questions.

Clear stats: Deletes all replies and stats for the question (not the questions themselves).

d) Questions

Here you can add questions / optin forms for the survey.

The screenshot shows the 'Questions' section of the 'Survey Settings' interface. It features a blue '+ Add...' button with a dropdown arrow. Below this button is a list of three question types, each with a corresponding icon: 'Multiple choice' (checkbox icon), 'Open question' (text box icon), and 'End-point' (stop sign icon).

There are 3 kinds of choices you can add here:

1. Multiple choice questions

The visitor is offered a closed number of choices.

If no choices are created, the question can be used as an HTML node, that can contain any kind of html content (text, images, videos, etc.)

2. Open questions

The user is presented with a text box, where he can enter an unlimited amount of text.

3. End-point

This is the optin form, where the user is asked for his/her details, and the corresponding action is triggered (moved into a new autoresponder list, subscribed to a webinar, etc.)

MULTIPLE CHOICE QUESTIONS:

The screenshot shows a web-based editor for creating a multiple choice question. At the top, there's a title bar '1 . Question one'. Below it are three input fields: 'Title' (containing 'Question one'), 'Question Text' (containing 'Which pet do you have?'), and 'Next Question' (a dropdown menu showing '-').

In the center, there's a 'Preview' section showing a dashed box containing the question text 'Which pet do you have?' followed by two radio button options: 'A dog' and 'A cat', and a 'Submit' button at the bottom.

On the right side, there's a 'Design' panel. It includes a 'IT Body' section with 'Width' (580 px) and 'Height' (auto px) settings, both with 'Adjust' checkboxes. Below this is a 'Background Image' section with a dropdown menu and a 'Select' button. Then, a 'Background Color' section with a color picker. Further down is a 'Repeat image' checkbox and an 'Internal Margin' section with 'Top', 'Bottom', 'Left', and 'Right' settings, each with a value of 20.

At the bottom of the 'Design' panel, there are three tabs: 'Question', 'Choices', and 'Submit button'. The 'Question' tab is currently selected.

At the bottom of the editor, there's an 'Introductory Text' field, an 'Add Media' button, and a rich text editor toolbar with various formatting options like bold, italic, underline, and link.

After adding a new multiple choice question, a new question element appears on the screen, where you can configure all settings:

Question title: a reminder for you, not visible to visitors

Question text: this is the actual question text that will be presented to the visitor.

Next question: the question where the user will be led to after answering this one (can be overridden by the different choices).

Then comes the **Style editor** to configure the appearance of the question. It is divided into 4 elements.

Body: applies to the whole box. You can configure things like width, height, background image (you can use one of the predefined ones, or upload your own), background color, margins, etc.

Question: applies to the question text

Choices: applies to each one of the individual choices

Submit button: applies to the “Next” button that will lead the visitor to the next question. You can use a text button or an image (you can use one of the predefined ones, or upload your own)

After you change any of these settings, the preview box will be updated in real time.

The **Introductory text** (optional) will appear on top of the question text. Here you can put any HTML content you desire, using either the visual editor, or the HTML text editor. For example, if you wanted to embed a youtube video, you can do it by copying and pasting the embed code. If you want just a plain HTML node, leave the title blank, and add no choices, so the introductory text will be the only visible part of the question.

Note: the content for the introductory text will be visible in the preview once you save the survey.

Note: when the question is first created, you get a limited HTML editor. If you want to get the full WordPress editor, save the survey first.

Below that are the choices

The screenshot displays the 'Choices' section of a survey editor. At the top, there is a '+ Add Choice' button. Below it, the section is titled 'Choices:'. The first choice is '1. A dog', which is selected with a blue circle icon. To the right of the choice title are icons for expand, collapse, and delete. Below the choice title, there is a text input field for 'Answer Text' containing 'A dog' and a dropdown menu for 'Next Question' set to '-'. Below these fields is a section titled 'Advanced list segmentation metadata' with a dropdown arrow. This section contains four input fields: 'Autoresponder list' (a dropdown menu set to '-'), 'Webinar' (a dropdown menu set to '-'), 'Autoresponder tag' (a text input field), and 'Tag value' (a text input field). Below the metadata section, the second choice '2. A cat' is visible, also with expand, collapse, and delete icons.

Each choice corresponds to one of the options that are presented to the user to choose from when replying to the question. If you select a “next question”, the visitor will be led to that question.

You can also edit the settings under “Advanced list segmentation metadata” (only for advanced users). If you edit the settings here, and the user picks this answer, at the end of the survey, after he enters his e-mail address, he’ll be put into this particular list/webinar (this can be overridden by upcoming questions, and also by the end point).

Note: this is done on a “the last one wins” basis. Let’s see it with an example:

Q1. What’s your favourite pet?

The user answers “dogs”, associated with the autoresponder list “dogs”. If the survey ends here, he’ll be put in the list “dogs”.

If there is a new question, like this:

Q2: Do you like big or small dogs?

If the user answers “small”, and that answer is associated with the list “small-dogs”, then at the end the visitor will only be subscribed to “small-dogs”, but not to dogs.

Same thing applies to autoresponder tags and webinars (last one wins)

Note: it is important to make sure that the next question is set either for the question, or the answers; otherwise, if there is no next question, the survey will close.

OPEN QUESTIONS:

The screenshot shows a question editor interface. At the top, there are three input fields: 'Title' with the text 'What is your biggest problem in IM?', 'Question Text' with the same text, and 'Next Question' with a dropdown menu showing a minus sign. Below these is a 'Preview' section showing a dashed box containing the question text and a 'Submit' button. To the right of the preview is a 'Design' panel. The 'Design' panel has a tab labeled 'IT Body'. It contains settings for 'Width' (580 px), 'Height' (auto px), and checkboxes for 'Adjust width to content' (unchecked) and 'Adjust height to content' (checked). There is a 'Background Image' section with a dropdown menu and a 'Select' button. Below that is a 'Repeat image' checkbox (unchecked). The 'Background Color' is set to a light gray. The 'Internal Margin' section has four spinners: 'Top' (20), 'Bottom' (20), 'Left' (20), and 'Right' (20). At the bottom of the 'Design' panel, there are three expandable sections: 'Question' (expanded), 'Reply Box', and 'Submit button'.

In this kind of questions there are no choices; instead there is a text box for the user to enter an unlimited text. The size of the box can be configured under “Reply Box” settings.

Like in the multiple choice questions, you can enter any kind of HTML content, and configure the question elements like size, colors, fonts, submit button, etc.

END POINT:

This is where the survey ends, and where the visitor will be presented with an opt-in box.

The screenshot shows the configuration interface for an opt-in form titled 'Optin form 1'. At the top, there's a title field with the text 'Optin form 1' and a subtitle 'Just as a reminder (not visible to visitors)'. Below this are five tabs: 'Style' (active), 'Content', 'Settings', 'Autoresponder automation', and 'AR magic'. The main area is divided into two sections: 'Preview' and 'Design'. The 'Preview' section shows a dashed box containing a form with two input fields labeled 'Your name' and 'Your e-mail', and a 'Submit' button. The 'Design' section on the right lists four design elements: 'IT Body', 'A HTML Content', 'Form Fields', and 'Submit button'.

All the options here are classified in tabs:

Tab1 : Style

Like in the previous question types, you can configure thinks like background, color, fonts, etc.

Tab2: Content

The screenshot shows the 'Content' tab in the configuration interface. At the top, there are five tabs: 'Style', 'Content' (active), 'Settings', 'Autoresponder automation', and 'AR magic'. The main area contains several options: 'Use your own HTML autoresponder code' (unchecked), 'Display Name Box' (checked), 'Name placeholder' (text field with 'Your name'), 'E-mail placeholder' (text field with 'Your e-mail'), and 'Display Spam Notice' (unchecked). Below these is a 'Body' section with an 'Add Media' button and a rich text editor. The rich text editor has a toolbar with various formatting options (bold, italic, text color, background color, bulleted list, numbered list, link, unlink, insert image, insert video, insert iframe, insert table) and a text area. At the bottom of the text area, it says 'Path: p'. A note at the very bottom states: 'This content will only be visible in the preview once you've saved the survey'.

If you decide to use your own autoresponder code, you will only be presented with an HTML text box, where you can enter anything you want.

If, on the other hand, you use the Survey Snatcher API integrations with any of the supported autoresponders, the generation of the optin form is managed for you. Here you can choose if you want to ask for the visitor's name (as well as for the email), and if you want to show any spam notice (ex: we will never sell your e-mail address, etc.).

If you choose "Use your own autoresponder", the content of the end-point will be just the content of the "Body" HTML box. If you use one of the presets, the body text will be shown above the optin form (so you could have anything like text, image, videos, etc).

Tab3: Settings

* Style Content **Settings** Autoresponder automation AR magic

☒ Stay on the same page

Redirect URL
Redirect the visitor here after completing the survey

☒ Use Facebook connect

☒ Display Social Media Share Buttons

Facebook share title
This is the title of the text that will appear on the visitor's wall

Facebook share text
This is the content of the text that will appear on the visitor's wall

Twitter share text
This is the text that will appear in the Tweet

Facebook share text
This is the text that will appear on the visitor's Google + Page

Here you can configure what will happen to the user after finishing the survey (either stay on the same page or be redirected to a new one).

Facebook connect: If you check this option, a button will appear in the optin form so that the user can log in using facebook (make sure to create a Facebook app first and enter the API details under the plugin settings).

Display social share buttons: If checked, below the optin box, 3 social share buttons will appear (Facebook, Twitter and Google+). You can also edit the predefined text that will appear after they click on the share button.

Tab4: Autoresponder automation

The screenshot shows the 'Autoresponder automation' tab selected. The title is 'Optin form 1'. Below the title, it says 'Just as a reminder (not visible to visitors)'. The tab bar includes 'Style', 'Content', 'Settings', 'Autoresponder automation' (active), and 'AR magic'. The main area contains four fields: 'Autoresponder list' with a dropdown menu showing '-'; 'AR tag' with a text input field; 'Tag value' with a text input field; and 'Webinar' with a dropdown menu showing '-'.

Here you can override any previous settings about list, tags, or webinar. If you select a value here, any previous ones will be ignored. If you leave them blank, the visitor will be subscribed to the last selected option in the previous questions (on a “last one wins” basis).

Tab5: AR Magic

The screenshot shows the 'AR magic' tab selected. At the top, there is a yellow warning box that says: 'Warning! messing up with these settings might have unexpected consequences for your list. Click here to learn how this stuff works'. Below the warning, the 'Action' dropdown is set to 'Copy'. There is a 'Get URL' button. The 'URL' field is empty. Below the URL field, it says 'Append this to the end of your survey page url'. The 'Thank you page content' section has an 'Add Media' button and a rich text editor with 'Visual' and 'Text' tabs. The rich text editor has a toolbar with various formatting options like bold, italic, font family, font size, link, unlink, etc. The path shown at the bottom is 'Path: p'.

Hey, we have a big warning sign here, and it's for a reason ;-)

Now, this is what this thing does: let's say you have people who are already in your list (in any of the supported autoresponder systems), and want to move/copy them to a new list depending on their answers to a survey, without them entering their e-mail address again. With this “Autoresponder magic” you can do very easily!

Instead of redirecting them to the normal survey page (let's say www.my-page.com/survey), you append some extra parameters at the end of the url, and send a message to your list using this special url (ex: www.my-page.com/survey?sid=231&e={email}). If they click the link, their e-mail address will be embedded in the link, so they won't need to enter their e-mail address. When they get to the end point, instead of the optin box, they will get the content of the "Thank you page content" box, and will be moved or copied (depending on the option you select) to the new list. How cool is that? ;-)

They are also cookie'd, so the next time they visit the page and take the survey again, even if they come from a normal link, the plugin will remember all the settings.

Note: if you select "move" instead of copy, you will also need to enter a "list from" option.

To get this option up and running, when you are mailing to your list using one of the autoresponder e-mail editors, append the extra url parameters that you get after clicking "get url" to the link, and replace {email} by the autoresponder e-mail placeholder. Just remember not to use any click tracking from the autoresponder, as this messes with the system, and leave the plain url in the e-mail.

Note: the character ? is used to separate a normal url from the parameters, and can only appear once. If your url already has one (ex: <http://www.site.com?p=99>), then replace the ? in the extra parameters by &.

For example, if the url of your survey is the one above, and the extra parameters are like this: ?sid=231&e={email}, the final url will be: <http://www.site.com?p=99&sid=231&e={email}>

If, on the other hand, the original url does not contain ?, you will append the normal string at the end (ex, for <http://www.site.com/post1>, the final url would be <http://www.site.com/post1?sid=231&e={email}>)

Final note: double check your settings here before mailing your list, as if it is improperly configure, might have undesired effects and move people among your lists!

4.3. SEO

The screenshot shows the 'Survey Snatcher' interface for configuring an SEO rule. At the top, there's a breadcrumb 'Survey Snatcher / SEO' and a '+ New SEO Rule' button. Below this is a 'new rule test' section with a 'Name' field containing 'new rule' and a 'Survey to Show' dropdown set to 'New Quiz'. A 'Keywords' section contains two input fields: '*internet marketing*' and 'internet marketers', each with a red 'X' delete button. Below these is a '+ Add Keyword' button and a note: 'Note: You can use * as wildcard'. At the bottom right of this section are 'Export Stats' and 'Delete' buttons. A green 'Save' button is located below the 'new rule test' section. Below this is a 'Settings' section with a 'Store SEO keywords in database' toggle set to 'ON'. A warning message states: 'Warning: this could make your WP database grow pretty big if you receive a lot of SEO traffic'. At the bottom of the settings section are 'Export data' and 'Reset SEO Stats' buttons. A green 'Save' button is located below the settings section.

SEO Rules work like this: if the visitor just arrived from a Search Engine (Google / Bing / Yahoo), using a particular keyword, he can be presented with a specific survey.

When you add a SEO rule, you can select a survey (must be active) and as many SEO keywords as you desire. If the searched keyword matches any of those in the list, the survey will be shown.

For the keywords, you can use the wildcard *, which will replace any kind of content. If no wildcard entered, there will be only exact matches.

This is better explained with an example:

User search in SE	Text for keyword	Is there a match?
black car	black car	YES
black cars	black car	NO
a black car	black car	NO
black cars for sale	black car*	YES
a black car in the garage	black car*	NO
i want a black car	*black car	YES
black cars for sale	*black car	NO
the best black car in the world	*black car*	YES
a black and white car	*black car*	NO

The plugin also creates a shortcode to display the searched keyword. So, if you enter the following:

```
[incoming-keyword default="default kw"]
```

If the user just came from a Search Engine, it will show the searched keyword; otherwise, it will show the default keyword.

You can use the shortcode in any post/page, or in any of the surveys.

In a real life example, you could enter this string:

Hello, you came here looking for [incoming-keyword default="blue widgets"], have a look around!

If the visitor just came from a SE using the keyword "yellow widgets", he will see:

Hello, you came here looking for yellow widgets, have a look around!

In any other case, he would see:

Hello, you came here looking for blue widgets, have a look around!

If the option "Store SEO keywords in database" is checked, then all incoming queries will be recorded in the database, and you can sport all stats using the button "Export data".

Warning: this might make the database grow pretty big if you receive a lot of SEO traffic!

If you want to delete all previous stats, click on the button "Reset SEO stats".

Warning: If the visitor is logged in to his Google account (using https:// address instead of http://) at the moment of the search, the keyword is then not transferred, so you won't be able to get the incoming keyword.

4.4. Split testing

In case you want to split test different elements in a survey, you can create split-tests.

[Survey Snatcher](#) / Split Testing

Split-test list

Name

New Split Test

OFF

Edit

Delete

+ New Split Test

A split-test is a collection of two or more surveys, that will be displayed randomly, and the results (views and conversions) is then recorded and displayed:

[Survey Snatcher](#) / [Split Testing](#) / New Split Test

New Split Test

Name

New Split Test

Just as a reminder

Save

Survey	Views	Conversions	Conversion Rate	
A question with just HTML it's good	62	0	0%	✕
aaaa	80	21	26%	✕

+ Add survey

Survey

A question with j...

aaaa

Views

Conversions

0 20 40 60 80

✕ Reset Stats

Delete

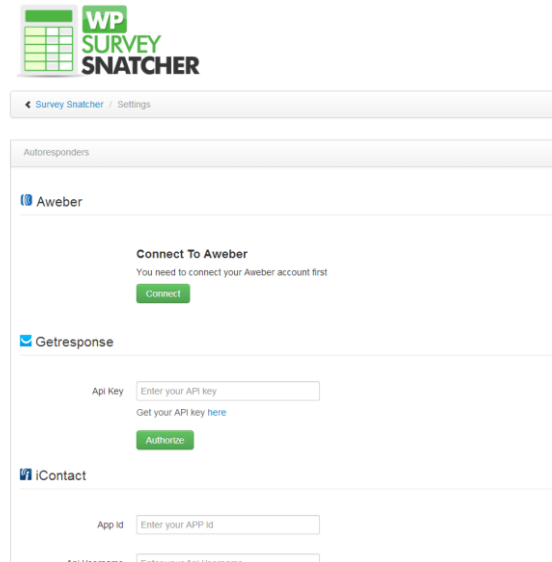

To create a split-test you just need to enter a name (not visible to the visitor, just for internal use), and two or more surveys. Then, instead of showing a fixed surveys, they are displayed on a random basis.

As always, we provide a “Reset stats” button to clear the database.

The recommended way to do a split-test is the following: create a survey, add the questions and edit all settings. Once the survey is finished, duplicate it and modify all settings you would like to alter. After that, create a new split-test and select both surveys.

4.5. Settings

This screen has several parts:

The screenshot shows the 'WP SURVEY SNATCHER' logo at the top left. Below it is a breadcrumb trail: '< Survey Snatcher / Settings'. The main section is titled 'Autoresponders'. It contains three integration options:

- Aweber**: A section with the heading 'Connect To Aweber' and the text 'You need to connect your Aweber account first'. Below this is a green 'Connect' button.
- Getresponse**: A section with a checked checkbox. It contains an 'Api Key' label, a text input field with the placeholder 'Enter your API key', and a link 'Get your API key here'. Below the input field is a green 'Authorize' button.
- iContact**: A section with an 'App Id' label and a text input field with the placeholder 'Enter your APP Id'. Below this is a text input field with the placeholder 'Enter your iContact iContact ID'.

Image Pack

Click on “Download” after installing the plugin to download the image pack, consisting on 50 images that can be used as image background, popup background, etc.

Activation details

Your activation details (the e-mail you used when you purchased the plugin)

5. SURVEY SELECTION

The following describes how the plugin decides which survey to show (in case there are different ones):

- 1) If there is a SEO rule and the SEO keyword for the rule matches the incoming keyword, the survey selected in the first matched SEO rule will be displayed
- 2) If there is a split-test activated, and the display rule (show everywhere - specific post/page/category) of the first element in the split-test matches the current post/page/category where the user is right now, a random survey out of all the ones in the split-test will be selected.
- 3) If no SEO or Split-test, each individual survey will be checked, starting from the oldest. If one of them matches the display rules (show everywhere – specific post/page/category), that survey will be displayed.

So, in a nutshell, this is the process:

6. TROUBLESHOOTING

¡Help! My survey is not displaying, what could be happening?

If you have created a survey, but you cannot see it displayed in the user area, check the following:

1. The survey is active
2. Go into the survey, and check the “display options” tab:

The screenshot shows the 'Display options' configuration panel. It includes a 'Method' dropdown set to 'Popup'. Under 'Trigger settings', the 'Cookie' checkbox is unchecked, 'Do not show again until after' is set to 0 days, 'Delay' is 0 secs, and 'Trigger only after page scroll' is unchecked. The 'Posts/pages' section has 'Show everywhere' unchecked. Below this, there are two scrollable lists: 'Posts' (containing titles like 'Must-Have Reiki Accessories for 1', 'Best of the Best Bicycle Locks fro', 'Top 3 Portable Reiki Tables With', '3 Top of the Line Headphones for', '3 of the Best Bike Locks Under \$2') and 'Categories' (containing 'Amazon Kindle', 'Bike Locks', 'Headphones', 'Reiki'). At the bottom, 'Show in' has three unchecked checkboxes: 'Home Page', 'Category page', and 'Archive page'.

Check that the cookie – do not show again until after x days is disabled

Make sure the delay is set to 0

Make sure the page scroll trigger is disabled

Make sure that either “show everywhere” is checked, or the specific post/page/category is selected.

Test with another display method, and see if it still does not appear.

If none of this seems to work, then open a support ticket and we’ll be happy to help!

7. SUPPORT

If you have any questions, comments, etc., please open a support ticket at:

<http://imtoolshq.com/support/>
