System Time Conversion

SIEMENS

Application Number : A4027118 - A0395

User Manual

We reserve the right to make technical changes to this product.

Copyright

Reproduction, transmission or use of this document or its contents is not permitted without express written authority. Offenders will be liable for damages. All rights, including rights created by patent grant or registration or a utility model or design, are reserved.

General Notes

Note

The standard applications are not binding and do not claim to be complete regarding the circuits shown, equipping and any eventuality. The standard applications do not represent customer-specific solutions. They are only intended to provide support for typical applications. You are responsible in ensuring that the described products are correctly used. These standard applications do not relieve you of the responsibility in safely and professionally using, installing, operating and servicing equipment. When using these standard applications, you recognize that Siemens cannot be made liable for any damage/claims beyond the liability clause described. We reserve the right to make changes to these standard applications at any time without prior notice. If there are any deviations between the recommendations provided in these standard applications and other Siemens publications - e.g. Catalogs - then the contents of the other documents have priority.

Warranty, liability and support

We do not accept any liability for the information contained in this document.

Any claims against us - based on whatever legal reason - resulting from the use of the examples, information, programs, engineering and performance data etc., described in this standard application shall be excluded. Such an exclusion shall not apply in the case of mandatory liability, e.g. under the German Product Liability Act ("Produkthaftungsgesetz"), in case of intent, gross negligence, or injury of life, body or health, guarantee for the quality of a product, fraudulent concealment of a deficiency or breach of a condition which goes to the root of the contract ("wesentliche Vertragspflichten"). However, claims arising from a breach of a condition which goes to the root of the contract shall be limited to the foreseeable damage which is intrinsic to the contract, unless caused by intent or gross negligence or based on mandatory liability for injury of life, body or health. The above provisions does not imply a change in the burden of proof to your detriment.

Copyright© 2008 Siemens A&D. It is not permissible to transfer or copy these standard applications or excerpts of them without first having prior authorization from Siemens A&D in writing.

For questions regarding this application please contact us at the following e-mail address:

<mailto:applications.erlf.aud@siemens.com>

Applicable conditions

/ Alternative 1: (internal business)

If nothing else has been negotiated, then the "General Conditions for the Supply of Products and Services in Siemens Internal Business", valid at the time of sale, are applicable.

/ Alternative 2: (domestic business of Siemens AG)

If nothing else has been negotiated, then the "General License Conditions for Software for Automation and Drives for Customers with a Seat or Registered Office in Germany", valid at the time of sale, are applicable.

/ Alternative 3: (direct export business of Siemens AG)

If nothing else has been negotiated, then the "General License Conditions for Software Products for Automation and Drives for Customers with a Seat or Registered Office outside Germany", valid at the time of sale, are applicable.

/ Alternative 4: (conditions of the particular regional office for the regional office business)

If nothing else has been negotiated, then the "...", valid at the time of sale, are applicable.

Qualified personnel

In the sense of this documentation qualified personnel are those who are knowledgeable and qualified to mount/install, commission, operate and service/maintain the products which are to be used. He or she must have the appropriate qualifications to carry-out these activities

e.g.:

- Trained and authorized to energize and de-energize, ground and tag circuits and equipment according to applicable safety standards.
- Trained or instructed according to the latest safety standards in the care and use of the appropriate safety equipment.
- Trained in rendering first aid.

There is no explicit warning information in this documentation. However, reference is made to warning information and instructions in the Operating Instructions for the particular product.

1 System Time Conversion

1.1 Task / Functionality of the Unit

The unit contains the following functionalities:

- Conversion of a SIMOTION data type DATE_AND_TIME into a serial time (UTC time)
- Conversion of a serial time (UTC time) into the SIMOTION data type DATE_AND_TIME
- Conversion of a SIMOTION data type TIME into separate values for days, hours, minutes, seconds and milli seconds
- Conversion of a SIMOTION data type DATE into separate values for years, month and days
- Conversion a ASCII string (date / time) into the SIMOTION data type DATE_AND_TIME

1.2 Function Elements and Integration

Table 1-1: Elements and integration

Source	ConvTime	Programming language	ST
Library	LBasic	Know How Protection	No
Function / Function block program	Features / Function	Must be adapted to the application	
FBDateAndTimeToUTC	Callable in all cyclic tasks	No	
FBUUTCtoDateAndTime	Callable in all cyclic tasks	No	
FBConvertTimeToInt	Callable in all cyclic tasks	No	
FBConvertDateToInt	Callable in all cyclic tasks	No	
FBConvertStringToDateAndTime	Callable in all cyclic tasks	No	

2 Program Organization Unit of the Unit

2.1 Function Block FBDateAndTimeToUTC

2.1.1 Functionality

The function block FBDateAndTimeToUTC converts a SIMOTION time delivered at the input connector 'dateTime' into a serial time of seconds. The output corresponds to the time 1. January 1970, 0:00:00 Greenwich Time. The calculation includes the time zone offset 'timeZone' as well as summertime change 'dayLight'.

In case of an invalid time target or an invalid time zone offset, the output 'error' is set 'error = TRUE' and the output 'utcTime' remains unchanged.

Features / Limitations:

Definition area of the input connector 'dateTime':

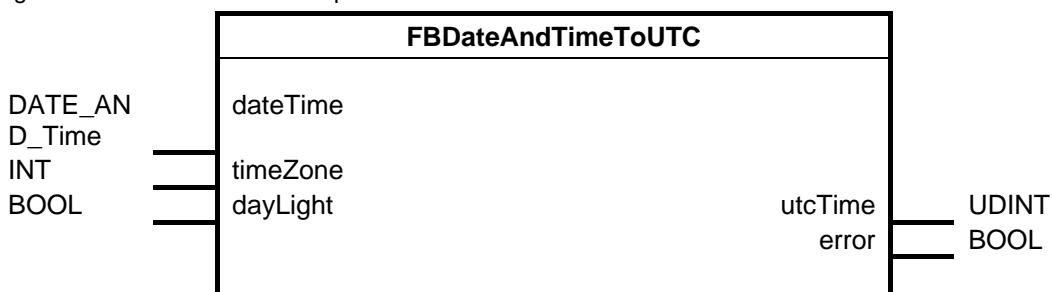

] DT#1992-02-19-13:00:00; DT#2106-02-06-18:29:15]

Definition area of the input connector 'timeZone':

] -720; 720]

2.1.2 Schematic LAD – Representation

Figure 2-1: Schematic LAD - Representation

User Manual

2.1.3 Input and Output Parameters

Table 2-1: Input and output parameters

Element	P type ¹⁾	Data type	M/O ²⁾	Initial value	Description
dateTime	IN	DATE_AND_Time	M	-	Time in data type DATE_AND_TIME
timeZone	IN	INT	M	-	Time zone offset in minutes
dayLight	IN	BOOL	M	-	0: Wintertime 1: Summertime
utcTime	OUT	UDINT	-	-	Serial time
error	OUT	BOOL	-	-	Error parameterization

¹⁾ Parameter types: IN = input parameter, OUT = output parameter,
IN/OUT = in / out parameter

²⁾ Parameter type: M = mandatory parameter, O = optional parameter

2.2 Function Block FBUTCtoDateAndTime**2.2.1 Functionality**

The function block FBUTCtoDateAndTime calculates the date and the local time out of the number of elapsed seconds since 1. Januar 1970, 0:00:00 Greenwich Time (UTC time) and provides them in the data format DATE_AND_TIME at the output 'dateTime'.

The calculation includes the time zone offset 'timeZone' as well as the summertime change 'dayLight'. The corresponding day of the week is also provided at the output 'weekDay'.

In case of an invalid time target or an invalid time zone offset, the output 'error' is set 'error = TRUE', the outputs 'dateTime' and 'weekDay' remain unchanged.

Features / Limitations:

Definition area of the input connector 'utcTime':

[694_224_000; 4_294_967_295]

Definition area of the input connector 'timeZone':

] -720; 720]

User Manual

2.2.2 Schematic LAD – Representation

Figure 2-2: Schematic LAD - Representation

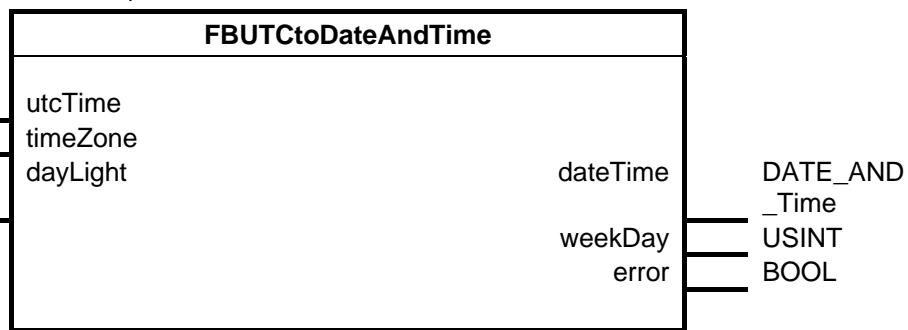

**2.2.3 Input and Output Parameters**

Table 2-2: Input and output parameters

Element	P type ¹⁾	Data type	M/O ²⁾	Initial value	Description
utcTime	IN	UDINT	M	-	Serieal time
timeZone	IN	INT	M	-	Time zone offset in minutes
dayLight	IN	BOOL	M	-	Summertime change 0: Wintertime 1: Summertime
dateTime	OUT	DATE_AND_Time	-	-	Time in data type DATE_AND_TIME
weekDay	OUT	USINT	-	-	Day of week 1: Sunday 2: Monday ... 7: Saturday
error	OUT	BOOL	-	-	Error parameterization

¹⁾ Parameter types: IN = input parameter, OUT = output parameter,

IN/OUT = in / out parameter

²⁾ Parameter type: M = mandatory parameter, O = optional parameter

User Manual

2.3 Function Clock FBConvertTimeToInt**2.3.1 Functionality**

The function block FBConvertTimeToInt uses a time specification in the SIMOTION format TIME to calculate the separate number of days, hours, minutes, seconds and milli seconds.

An error analysis (parameterization) is not done.

2.3.2 Schematic LAD – Representation

Figure 2-3: Schematic LAD – Representation

**2.3.3 Input and Output Parameters**

Table 2-3: Input and output parameters

Element	P type ¹⁾	Data type	M/O ²⁾	Initial value	Description
timeln	IN	DATE	M	-	time specification in SIMOTION format
days	OUT	UDINT	-	-	Separate number of days
hours	OUT	UDINT	-	-	Separate number of hours
minutes	OUT	UDINT	-	-	Separate number of minutes
seconds	OUT	UDINT	-	-	Separate number of seconds
millisecond s	OUT	UDINT	-	-	Separate number of milli seconds

¹⁾ Parameter types: IN = input parameter, OUT = output parameter, IN/OUT = in / out parameter
²⁾ Parameter type: M = mandatory parameter, O = optional parameter

User Manual

2.4 Function Clock FBConvertDateToInt**2.4.1 Functionality**

The function block FBConvertDateToInt uses a date specification in the SIMOTION format DATE to calculate the separate number of years, months and days.

An error analysis (parameterization) is not done.

2.4.2 Schematic LAD – Representation

Figure 2-4: Schematic LAD – Representation

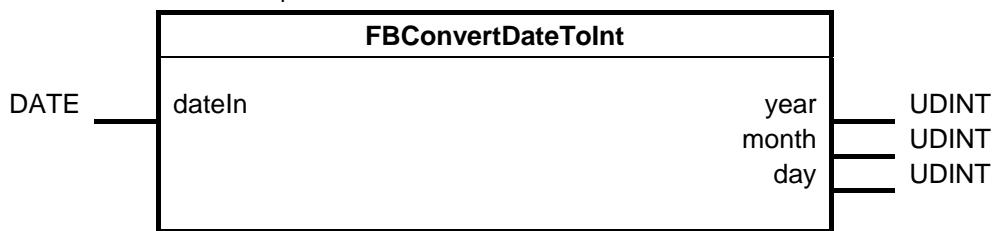

**2.4.3 Input and Output Parameters**

Table 2-4: Input and output parameters

Element	P type ¹⁾	Data type	M/O ²⁾	Initial value	Description
dateln	IN	DATE	M	-	Date specification in SIMOTION format
year	OUT	UDINT	-	-	Separate number of years
month	OUT	UDINT	-	-	Separate number of month
day	OUT	UDINT	-	-	Separate number of days

¹⁾ Parameter types: IN = input parameter, OUT = output parameter,
IN/OUT = in / out parameter

²⁾ Parameter type: M = mandatory parameter, O = optional parameter

2.5 Function Block FBConvertStringToDateAndTime

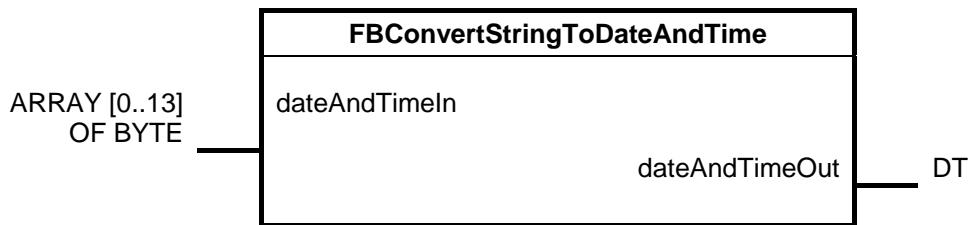

2.5.1 Functionality

The function block FBConvertStringToDateAndTime converts an ASCII string into the SIMOTION date and time format DT.

An error analysis (parameteriation) is not done.

2.5.2 Schematic LAD – Representation

Figure 2-5: Schematic LAD - Representation

2.5.3 Input and Output Paramet

Table 2-5: Input and Output Parameters

Element	P type ¹⁾	Data type	M/O ²⁾	Initial value	Description
dateAndTimeIn	IN	ARRAY [0..13] OF BYTE	M	-	Date and time specification as ASCII string
dateAndTimeOut	OUT	DT	-	-	Date and time specification in SIMOTION format

¹⁾ Parameter types: IN = input parameter, OUT = output parameter,
IN/OUT = in / out parameter

²⁾ Parameter type: M = mandatory parameter, O = optional parameter
